Chapters cover restoration of agricultural lands, barrens, coastal ecosystems, prairies and range lands. Additional sections address temperate forests and watersheds, mined lands, soil bioengineering, urban issues including waste treatment and solid toxic and radioactive waste management. The book also covers restoration of aquatic systems, includes chapters on strategic planning and land acquisition and provides examples of successful projects. Restoration and Recovery Howard R. Reclamation of Mine-impacted Land for Ecosystem Recovery Nimisha Tripathi, Raj S. Singh, Colin D. Hills, 2016-02-04. Mining activities significantly impact the environment; they generate huge quantities of spoil, promote deforestation and the loss of agricultural production as well as releasing contaminants that result in the loss of valuable soil resources. These negative impacts are now being recognized and this book shows how corrective action can be taken. The introduction of sustainable mining requires mitigation strategies that start during the mine planning stage and extend to after mineral extraction has ceased and post-closure activities are being executed. *Reclamation of Mine-impacted Land for Ecosystem Recovery* covers methods of rejuvenation of mine wasteland, including different practices of physical, chemical and ecological engineering methods, benefits of rejuvenation, stabilization of land surfaces, pollution control, aesthetic improvement, general amenity, plant productivity and carbon sequestration as well as restoring biodiversity and ecosystem function, best management practices and feasible solutions to the impacts of mining which will reduce the pollution load by reducing the discharge rate and the pollutant concentration, reduce erosion and sedimentation problems and result in improved

abandoned mine lands and ecosystem development The authors explain how mining impacts on soil properties and how soil carbon reserves soil fertility can be restored when mining has ceased Restoration involves a coordinated approach that recognizes the importance of key soil properties to enable re vegetation to take place rapidly and ecosystems to be established in a low cost and sustainable way This book s unique combination of the methods for reclamation technologies with policies and best practice worldwide will provide the background and the guidance needed by scientists researchers and engineers engaged in land reclamation as well as by industry managers *The Restoration and Management of Derelict Land* Anthony David Bradshaw,M. H. Wong,2002 A broad discussion of modern restoration and the management needed after restoration It deals with relevant topics such as restoration ecology restoration planning ecological and ecotoxicological risk assessment management and adaptive management restoration in the broader context of sustainable development and case studies and examples related to the Asian region Major emphasis is placed on the Asian region but the techniques described in the book can also be applied to other regions The work should serve as a reference for undergraduate and postgraduate students professors decision makers and engineers in environmental science and management *Department of the Interior Draft Environmental Impact Statement on the Sunnyside Combined Hydrocarbon Lease Conversion* United States.
