Heim, G. Palm, 2013-03-08 **Stability and Origin of Biological Information** I. Miller, 1975 *Studies in Mathematics* Mathematical Association of America, 1962 **Psychophysics** George A. Gescheider, 2013-06-17 This third edition of a classic text which was first published in 1976 is the only comprehensive up to date presentation of psychophysics currently available It has been used by undergraduate and graduate students and scholars throughout the world and is consistently thought of as the best single source for learning the basic principles of psychophysics The coverage of the field is comprehensive including topics ranging from the classical methods of threshold measurement to the modern methods of detection theory to psychophysical scaling of sensation magnitude The approach is one in which methods theories and applications are described for each experimental procedure New features found in this third edition include methodological and theoretical contributions made in the field during this time period descriptions of adaptive procedures for measuring thresholds context effects in scaling theory of quantal fluctuations multidimensional scaling nonmetric scaling of sensory differences and the relationship between the size of the DL and the slope of the sensation magnitude function new methods for measuring the observer's sensitivity of criterion and an expanded discussion of category scaling including the range frequency model and verbally labeled categories and methods used to control the observer's nonlinear use of numbers in magnitude estimation such as line length scaling magnitude matching master scaling and category ratio scaling

Nonlinear Dynamics in Human Behavior Raoul Huys, Viktor K. Jirsa, 2010-12-09 Humans engage in a seemingly endless variety of different behaviors of which some are found across species while others are conceived of as typically human Most generally behavior comes about through the interplay of various constraints informational mechanical neural metabolic and so on operating at multiple scales in space and time Over the years consensus has grown in the research community that rather than investigating behavior only from bottom up it may be also well understood in terms of concepts and laws on the phenomenological level Such top down approach is rooted in theories of synergetics and self organization using tools from nonlinear dynamics The present compendium brings together scientists from all over the world that have contributed to the development of their respective fields departing from this background It provides an introduction to deterministic as well as stochastic dynamical systems and contains applications to motor control and coordination visual perception and illusion as well as auditory perception in the context of speech and music

Mathematical Models in Cell Biology and Cancer Chemotherapy M. Eisen, 2013-03-13 The purpose of this book is to show how mathematics can be applied to improve cancer chemotherapy Unfortunately most drugs used in treating cancer kill both normal and abnormal cells However more cancer cells than normal cells can be destroyed by the drug because tumor cells usually exhibit different growth kinetics than normal cells To capitalize on this last fact cell kinetics must be studied by formulating mathematical models of normal and abnormal cell growth These models allow the therapeutic and harmful effects of cancer drugs to be simulated quantitatively The combined cell and drug models can be used to study the effects of different methods of administering drugs The least harmful method of drug administration according to a given criterion can be found by applying optimal control theory The prerequisites for reading this book are an elementary knowledge of ordinary differential equations probability statistics and linear algebra In order to make this book self contained a chapter on cell biology and a chapter on control theory have been included Those readers who have had some exposure to biology may prefer to omit Chapter I Cell Biology and only use it as a reference when required However few biologists have been exposed to control theory Chapter 7 provides a short coherent and comprehensible presentation of this subject The concepts of control theory are necessary for a full understanding of Chapters 8 and 9

Alwyn Scott, 2007-12-14 Arguably the most intricate dynamic object in the universe the human brain is an unsounded source of wonder for the scientific community The primary aim of this book is to provide both students and established investigators in the growing area of neuroscience with an appreciation of the roles that mathematics may play in helping to understand this enigmatic organ Along with discussions of results obtained by the neuroscience community emphasis is placed on suggesting fruitful research problems for those planning to embark on mathematical studies in neuroscience To make the overall perspectives understandable to philosophers and psychologists essential features of the discussions are presented in ordinary English with more detailed mathematical comments in appendices and footnotes Although it attempts to maintain both clarity and biological relevance this is not a text on the anatomy of nerve systems thus readers should bring some knowledge of neurophysiology through other courses associated studies or laboratory research It is a guiding theme throughout the book that the brain is organized into several quite different levels of dynamic activity As will be seen these levels are hierarchically structured beginning with the molecular dynamics of intrinsic membrane proteins and proceeding upward through the switching properties of active membrane patches and synapses the emergence of impulses on active fibers overall properties of individual neurons and the growth of functional assemblies of interacting neurons to the global dynamics of a brain At each level of description reality turns different facets of her mystery to us and diverse phenomena make their contributions to the brain's collective behavior

Heidegger and Jewish Thought Elad Lapidot, Micha Brumlik, 2017-11-15 Once a prophet of critical other thought Heidegger has now for many become the epitome of the unthinkable in the light of the Black Notebooks controversy The unthinkable here is anti Semitism The encounter between Heidegger and the Jews has thus come to signify very much in the spirit of Heidegger s own anti Judaism the end of thought The present volume resists this view by positing not only Heidegger but also the Jewish people as representing thought The encounter between Heidegger and various traditions of Jewish thought is conceived here as a conversation inter alia an exchange between real or perceived others others to the philosophical tradition to mainstream modernity to Western Christian metaphysics to each other and even to themselves The conversation takes shape in this volume as a symposium of seventeen essays by leading scholars both of Heidegger s philosophy and of Jewish Studies

Semiotik / Semiotics. 1. Teilband Roland Posner, Klaus Robering, Thomas A. Sebeok, 2008-07-14 This series of HANDBOOKS OF LINGUISTICS AND COMMUNICATION SCIENCE is designed to illuminate a field which not only includes general linguistics and the study of linguistics as applied to specific languages but also covers those more recent areas which have developed from the increasing body of research into the manifold forms of communicative action and interaction For classic linguistics there appears to be a need for a review of the state of the art which will provide a reference base for the rapid advances in research undertaken from a variety of theoretical standpoints while in the more recent branches of communication science the handbooks will give researchers both an overview and orientation To attain these objectives the series aims for a standard comparable to that of the leading handbooks in other disciplines and to this end strives for comprehensiveness theoretical explicitness reliable documentation of data and findings and up to date methodology The editors both of the series and of the individual volumes and the

individual contributors are committed to this aim The language of publication is English The main aim of the series is to provide an appropriate account of the state of the art in the various areas of linguistics and communication science covered by each of the various handbooks however no inflexible pre set limits will be imposed on the scope of each volume The series is open ended and can thus take account of further developments in the field This conception coupled with the necessity of allowing adequate time for each volume to be prepared with the necessary care means that there is no set time table for the publication of the whole series Each volume is a self contained work complete in itself The order in which the handbooks are published does not imply any rank ordering but is determined by the way in which the series is organized the editors of the whole series enlist a competent editor for each individual volume Once the principal editor for a volume has been found he or she then has a completely free hand in the choice of co editors and contributors The editors plan each volume independently of the others being governed only by general formal principles The series editors only intervene where questions of delineation between individual volumes are concerned It is felt that this modus operandi is best suited to achieving the objectives of the series namely to give a competent account of the present state of knowledge and of the perception of the problems in the area covered by each volume To discuss your handbook idea or submit a proposal please contact Birgit Sievert
