higher than normal 8 bit per color channel precision enabling representation of the complete color gamut and the full visible range of luminance However to realize transition from the traditional toHDRimaging it is necessary to develop imaging algorithms that work with the high precision data Tomake such algorithms effective and feasible in practice it is necessary to take advantage of the limitations of the human visual system by aligning the data shortcomings to those of the human eye thus limiting storage and processing precision Therefore human visual perception is the key component of the solutions we discuss in this book This book presents a complete pipeline forHDR image and video processing fromacquisition through compression and quality evaluation to display At the HDR image and video acquisition stage specialized HDR sensors or multi exposure techniques suitable for traditional cameras are discussed Then we present a practical solution for pixel values calibration in terms of photometric or radiometric quantities which are required in some technically oriented applications Also we cover the problem of efficient image and video compression and encoding either for storage or transmission purposes including the aspect of backward compatibility with existing formats Finally we review existing HDR display technologies and the associated problems of image contrast and brightness adjustment For this purpose tone mapping is employed to accommodate HDR content to LDR devices Conversely the so called inverse tone mapping is required to upgrade LDR content for displaying on HDR devices We overview HDR enabled image and video quality metrics which are needed to verify algorithms at all stages of the pipeline Additionally we cover successful examples of the HDR technology applications in particular in computer graphics and computer vision The goal of this book is to present all discussed components of the HDR pipeline with the main focus on video For some pipeline stages HDR video solutions are either not well established or do not exist at all in which case we describe techniques for single HDR images In such cases we attempt to select the techniques which can be extended into temporal domain Whenever needed relevant background information on human perception is given which enables better understanding of the design choices behind the discussed algorithms and HDR equipment Table of Contents Introduction Representation of an HDR Image HDR Image and Video Acquisition HDR Image Quality HDR Image Video and Texture Compression Tone Reproduction HDR Display Devices LDR2HDR Recovering Dynamic Range in Legacy Content HDRI in Computer Graphics Software   MCITP: Windows Server 2008 Server Administrator Study Guide Darril Gibson,2011-01-31 Master Windows Server 2008 and navigate every detail of Microsoft s new MCITP Windows Server 2008 Server Administrator exam with the information in MCITP Windows Server 2008 Administration Study Guide Exam 70 646 with CD Learn the infrastructure Web and IT application servers and also how to use scripts and batch files to accomplish tasks on a regular basis As a Server Administrator you will understand how to manage the server operating system file and directory services distribute software patches and updates profile and monitor assigned servers and troubleshoot For Instructors Teaching supplements are available for this title   *Ruthless Compassion* Robert N.
