Our Molecular Future Douglas Mulhall, 2010-01-28 This is a vital book for those who care about the environment society and deploying new technology to check the destructive power of humankind Allan Thornton President Environmental Investigation Agency Washington DC and recipient of the Albert Schweitzer Medal This book will shake conventional environmental wisdom to its roots A landmark work that should be read by environmentalists and businesspersons alike Patrick Moore cofounder Greenpeace president Greenspirit In Our Molecular Future Mulhall neatly outlines why our increasing ability to manipulate single atoms and molecules is a concern and lays out the opportunities and threats this technology presents And it's surprisingly readable unlike most of the nanobabble in the science journals In the end as Mulhall admits he poses more questions than he answers But that's a good place to start New Scientist I just finished reading Douglas Mulhall's outstanding new book Our Molecular Future and I highly recommend it Put this one at the top of your list In an easy to read format with very few forays into geek speak Mulhall presents his well considered and thoroughly researched theories Overall an excellent overview for those who wish to understand how disruptive and enabling technologies may save us from ourselves and from mother nature And along the way you will learn a lot about how nanoscale technologies may enhance our lives provide abundance for all and greatly raise the standard of living for everyone Rating five stars out of five Rocky Rawstern Nanotech Now What Alvin Toffler's Future Shock was to the 20th century Our Molecular Future will be to the 21st century What will happen to our jobs health care and investments when the molecular revolution hits How might artificial intelligence transform our lives How can molecular technologies help us cope with climate changes earthquakes and other extreme natural threats Our Molecular Future explores some intriguing possibilities that answer these questions and many others Douglas Mulhall describes the exponential changes that are about to be wrought by the nanotechnology and robotic revolutions which promise to reduce the scale of computing to the nanometer a billionth of a meter while increasing computing power to almost unimaginable levels The resulting convergence of genetics robotics and artificial intelligence may give us hitherto undreamed of capacities to transform our environment and ourselves In the not so distant future our world may include machines that scour our arteries to prevent heart disease cars and clothes that change color at our whim exotic products built in our own desktop factories and enhancements to our personal financial security despite greatly accelerated obsolescence But while technology is making these fantastic leaps we may also encounter surprises that throw us into disarray climate changes earthquakes or even a seemingly improbable asteroid collision These extremes are not the nightmare scenarios of sensationalists Mulhall stresses nor are many of them human induced Instead they may be part of nature's cycle recurring more often than we've thought possible The good news is that this convergence

of catastrophe and technological transformation may work to our advantage If we re smart according to Mulhall we can use molecular machines to protect ourselves from nature s worst extremes and harness their potential benefits to usher in an economic renaissance This visionary link between future technology and past disasters is a valuable guide for every one of us who wants to be prepared for the twenty first century Further Praise for OUR MOLECULAR FUTURE A provocative and profoundly convincing message from the future Graham Hancock archaeological journalist and author of Fingerprints of the Gods In a breezy journalistic style Our Molecular Future takes us on a tour through some of the issues that will preoccupy ma
