Remmert, 2013-03-09 Of making many books there is no end and much study is a weariness of the flesh Eccl 12:12 In the beginning Riemann created the surfaces The periods of integrals of abelian differentials on a compact surface of genus g immediately attach a $2g$ -dimensional complex torus to X If $g \geq 2$ the moduli space of X depends on $3g-3$ complex parameters Thus problems in one complex variable lead from the very beginning to studies in several complex variables Complex tori and moduli spaces are complex manifolds i.e. Hausdorff spaces with local complex coordinates \mathbb{C}^n \mathbb{Z}^n holomorphic functions are locally those functions which are holomorphic in these coordinates z In the

second half of the 19 century classical algebraic geometry was born in Italy The objects are sets of common zeros of polynomials Such sets are of finite dimension but may have singularities forming a closed subset of lower dimension outside of the singular locus these zero sets are complex manifolds **Coherent Analytic Sheaves** H.
