Leisure In The Industrial Revolution:

Leisure in the Industrial Revolution Hugh Cunningham,2016-07-01 First published in 1980 This book is a study of what different classes of society understood by leisure and how they enjoyed it It argues that many of the assumptions which have underlain the history of leisure are misleading and in particular the notions that there was a vacuum in popular leisure in the early Industrial Revolution that with industrialisation there was sharp discontinuity with the past that cultural forms diffuse themselves only down the social scale and that leisure helped ease class distinctions An alternative interpretation is suggested in which popular culture can be seen as an active agent as well as a victim This title will be of interest to students of history

Leisure in the Industrial Revolution Hugh Cunningham,1980-01-01 **Leisure and Recreation Management** George Torkildsen,2005 Leisure and Recreation Management is essential reading for anyone interested in exploring both the theory and the practicalities of managing leisure and recreational facilities **Kraus' Recreation and Leisure in Modern Society** Daniel D. Time, work and leisure Hugh Cunningham, 2016-05-16 This book traces the history of the relationship between work and leisure from the leisure preference of male workers in the eighteenth century through the increase in working hours in the later eighteenth and early nineteenth centuries to their progressive decline from 1830 to 1970 It examines how trade union action was critical in achieving the decline how class structured the experience of leisure how male identity was shaped by both work and leisure how in a society that placed high value on work a leisured class was nevertheless at the apex of political and social power until it became thought of as the idle rich Coinciding with the decline in working hours two further tranches of time were marked out as properly without work childhood and retirement Accessible wide ranging and occasionally polemical this book provides the first history of how we have imagined and used time

Leisure and the Irish in the Nineteenth Century Leeann Lane, William Murphy, 2016 It has often been argued that modern leisure was born in the period from the mid nineteenth century to the outbreak of World War One Then it has been suggested that if leisure was not invented its forms and meanings changed Despite the recent expansion of the literature on Irish popular cultures perhaps most strikingly sport the conceptions purposes and practical manifestations of leisure among the Irish during this critical period have yet to receive the attention they deserve This collection represents an attempt to address this In twelve essays that explore vibrant expressions of associational culture the emergence of new leisure spaces literary manifestations and representations of leisure the pleasures and purposes of travel and the leisure pursuits of elite women the collection offers a variety of perspectives on the volume's theme As becomes apparent in these studies all manner of activity from music to football reading to dining travel to photography dancing to dining visiting to cycling child's play to fighting and attitudes to these were shaped not just by the drive to pleasure but by ideas of class respectability improvement and social control as well as political social educational medical and religious ideologies

The Economics of the Industrial Revolution (Routledge Revivals) Joel Mokyr, 2018-07-18 In recent years scholars from a variety of disciplines have addressed many perplexing

questions about the Industrial Revolution in all its aspects Understandably economics has become the focal point for these efforts as professional economists have sought to resolve some of the controversies surrounding this topic First published in 1985 this collection contains ten key essays written by leading economists on the subject of the Industrial Revolution Among the questions discussed are the causes for the pre eminence of Britain the roles of the inputs for growth capital labor technical progress the importance of demand factors the relation between agricultural progress and the Industrial Revolution and the standard of living debate The essays demonstrate that the application of fresh viewpoints to the literature has given us a considerable new body of data at our disposal making it possible to test commonly held hypotheses In addition this new data has enabled economists to apply a more rigorous logic to the thinking about the Industrial Revolution thus sharpening many issues heretofore blurred by slipshod methodology and internal inconsistencies Feminine Sentences Janet Wolff,1990 Until recently women have been noticeably absent from historical and sociological accounts of modernity As a step toward remedying this situation the essays gathered here challenge the continuing separation of sociological from textual analysis in cultural and feminist theory and inquiry They address critically the question of women s writing exploring the idea that women may begin to define their own lives and construct their own identities in a patriarchal culture through the very process of writing They also present a cogent defense of a feminist cultural politics including a politics of the body Integrating material drawn from a variety of sources feminist theory cultural and literary analysis sociology and art history Feminine Sentences is an original discussion of women s relationship to modern and postmodern culture Janet Wolff s book represents a major statement of her distinctive position and will be of interest to everyone working in the areas of cultural and literary theory women s studies and sociology FROM THE BOOK Women are sentenced to containment and silence This collection is intended as a contribution to the overthrow of that sentence and to the process whereby women find ways to intervene in an excluding culture and to articulate their own experience Feminine sentences are those formulations and expressions in a variety of cultural forms and media of women s own voice The literature of modernity describes the experience of men It is essentially a literature about transformations in the public world and its associated consciousness In so far as the experience of the modern occurred mainly in the public sphere it was primarily men s experience I want to argue that a feminist cultural politics of the body is a possibility There is every reason to propose the body as a privileged site of political intervention precisely because it is the site of repression and possession **Torkildsen's Sport and Leisure Management** George Torkildsen, The British Working Class 1832-1940 Andrew August,2014-06-11 In this insightful new study Andrew August examines the British working class in the period when Britain became a mature industrial power working men and women dominated massive new urban populations and the extension of suffrage brought them into the political nation for the first time Framing his subject chronologically but treating it thematically August gives a vivid account of working class life between the mid nineteenth and mid twentieth centuries examining the issues and concerns central to

working class identity Identifying shared patterns of experience in the lives of workers he avoids the limitations of both traditional historiography dominated by economic determinism and party politics and the revisionism which too readily dismisses the importance of class in British society

Mapping Leisure Ishwar Modi, Teus J. Kamphorst, 2018-02-06 This volume addresses the rich and varied thoughts concepts approaches and leisure practices in sixteen countries of three continents Australia Asia and Africa The chapters showcase the diversity in the forms and ways in which the idea and practice of leisure have developed across space and time However the common thread through the chapters is that concepts and practices of leisure are found all over the world from pre historic settlements to the present day consumer societies Seemingly being at leisure is a capacity of the human species present at birth and which develops in a variety of individual and societal contexts Even in situations where leisure gets little official recognition as being an aspect of life such as under colonial rule or in extremely work centric societies it needs to be contextually understood This is a welcome addition to the literature on leisure studies from a global and comparative perspective

Key Concepts in Leisure Jonathan Sutherland, 2009-09-09 Leisure studies encompasses the broadest range of leisure and sports pursuits and marries management administration and sports as well as customer service Key Concepts in Leisure presents an indispensable guide to the key themes and concepts in this rapidly developing fast paced and demanding industry

Interpreting the Industrial Revolution Peter N. Stearns, 1991 *Going to the dogs* Keith Laybourn, 2019-01-14 Greyhound racing emerged rapidly in Britain in 1926 but in its early years was subject to rabid institutional middle class opposition largely because of the legal gambling opportunities it offered to the working class Though condemned as a dissipate and impoverishing activity it was in fact a significant leisure opportunity for the working class which cost little for the minority of bettors involved in what was clearly little more than a bit of the flutter This book is the first national study of greyhound racing in Britain from its beginnings to its heyday in the 1930s and 1940s and up its long slow decline of the late twentieth century Much of the study will be defined by the dominating issue of working class gambling and the bitter opposition to both it and greyhound racing although the attractions of this American Night Out will also be examined

Network, Innovation and Competence-based Economy

Anna Ujwary-Gil, Natalia R. Potoczek, 2019-01-01 The inspiration for this monograph is the progress in information and IT technologies observed over several decades and the accompanying development of digital competences The collected results of the research work are grouped into three distinct chapters which at the same time have a common denominator in research perspectives Network based economy innovation based economy and competence based economy are primarily analyzed in relation to technological changes in the ICT area Each of these perspectives ultimately leads towards Economy 4.0 due to the progressing digital revolution called the fourth industrial revolution The contemporary importance of networks innovations and managerial competences in the economy is analyzed primarily in connection with technological progress The

issue of networks in economic life has been developing for over 30 years. The role of the network in achieving a competitive advantage is unquestioned while research issues are still being developed. This technological perspective is the most important context for network research today. Contemporary business models are developed based on a skillfully built inter-organizational network and a consciously used intra-organizational network. This applies to both commercial organizations and public entities. These issues are reflected in articles contained in this monograph, in particular in the first chapter. Various research conducted in organizations proves the increasing awareness of the importance of social life by managers and leaders as well as the increase in the ability to build networks using information and ICT. Research on networks which allows an understanding of the phenomenon of network formation leads to the creation of methods and tools supporting network management. Modern network researchers, especially in the field of management sciences, point out that understanding the nature of the network and the possibilities of interacting with the network will determine the competitive position of the organization. This awareness and the complexity of the network are a constant motivation to develop knowledge and use its application character. The concept of an innovation-based economy is included in the second chapter and is also related to technological progress in the field of communication. The studies presented relate to the degree of innovation, skillful differentiation of innovation and imitation, the effectiveness of project financing and the implementation of innovation. An important contribution to building knowledge on innovation comes from research conducted in individual sectors or regions where a new important perspective is gained and specific, sometimes unique, determinants of creating innovation are pointed out. References to regional and sectoral conditions can be found in individual subchapters. The research conclusions drawn have a cognitive and practical value for both researchers and management practitioners. In the third chapter of the monograph, studies that make an important contribution to building or verifying knowledge about the competence-based economy are grouped together. The research refers to the most important management problems and barriers to the development of organizations related to employees' competences. Reference was made to many research currents in management, e.g. to empower employees, build the image of the employer and the concept of sustainable development. Due to their long history of development, they would seem to be running out, while researchers prove that in contemporary commercial and non-commercial organizations, deficits in managerial competencies are still identified. This applies to both human management and technical competences, especially digital. Therefore, research indicating the reasons for a lack of competence in an era of strong popularization of these issues seems to be interesting. The purpose of this monograph was to present current research results and their importance in developing knowledge about the economy based on networks, innovations and competences. A lot of research was conducted from the perspective of changes in technological progress and the challenges of Economy 4.0. The new possibilities brought by the digital revolution in the field of building and managing networks and developing network-based business models cannot be underestimated. It should be expected that future

innovations will be developed mainly thanks to digital progress and will be determined by the digital competences of managers and leaders Modern research also shows that new generations of employees will compete primarily in the use of modern technological solutions such as data acquisition and processing analyzes and simulations on large data sets big data science data automation and robotization of production processes software integration cloud solutions and especially the increasingly comprehensive use of the Internet The importance of scientific research for learning about future phenomena understanding and taming the future is invaluable The authors and editors of the book express the hope that the research results presented in it will become an inspiration for new scientific explorations and the implementation of changes in organizations and economics
