How New Languages Emerge:

How New Languages Emerge David Lightfoot, 2006-01-05 An engaging account of how new languages come into being arguing that children are the driving force

How New Languages Emerge David Lightfoot, 2006-01-05 New languages are constantly emerging as existing languages diverge into different forms To explain this fascinating process we need to understand how languages change and how they emerge in children In this pioneering study David Lightfoot explains how languages come into being arguing that children are the driving force He explores how new systems arise how they are acquired by children and how adults and children play different complementary roles in language change Lightfoot makes an important distinction between external language language as it exists in the world and internal language language as represented in an individual's brain By examining the interplay between the two he shows how children are cue based learners who scan their external linguistic environment for new structures making sense of the world outside in order to build their internal language Engaging and original this book offers an interesting account of language acquisition variation and change

The Handbook of Language Emergence Brian MacWhinney, William O'Grady, 2018-05-01 This authoritative handbook explores the latest integrated theory for understanding human language offering the most inclusive text yet published on the rapidly evolving emergentist paradigm Brings together an international team of contributors including the most prominent advocates of linguistic emergentism Focuses on the ways in which the learning processing and structure of language emerge from a competing set of cognitive communicative and biological constraints Examines forces on widely divergent timescales from instantaneous neurolinguistic processing to historical changes and language evolution Addresses key theoretical empirical and methodological issues making this handbook the most rigorous examination of emergentist linguistic theory ever

How the Brain Got Language - Towards a New Road Map Michael A. Arbib, 2020-08-15 How did humans evolve biologically so that our brains and social interactions could support language processes and how did cultural evolution lead to the invention of languages signed as well as spoken This book addresses these questions through comparative neuro primatology comparative study of brain behavior and communication in monkeys apes and humans and an EvoDevoSocio framework for approaching biological and cultural evolution within a shared perspective Each chapter provides an authoritative yet accessible review from a different discipline linguistics evolutionary computational and neuro archeology and neuroarcheology macaque neurophysiology comparative neuroanatomy primate behavior and developmental studies These diverse perspectives are unified by having each chapter close with a section on its implications for creating a new road map for multidisciplinary research These implications include assessment of the pluses and minuses of the Mirror System Hypothesis as an old road map The cumulative road map is then presented in the concluding chapter Originally published as a special issue of Interaction Studies 19 1 2 2018

The Emergence of Protolanguage Michael A. Arbib, Derek Bickerton, 2010-09-03 Somewhere and somehow in the 5 to 7 million years since the last common ancestors of

humans and the great apes our ancestors got language The authors of this volume all agree that there was no single mutation or cultural innovation that took our ancestors directly from a limited system of a few vocalizations primarily innate and gestures some learned to language They further agree to use the term protolanguage for the beginnings of an open system of symbolic communication that provided the bridge to the use of fully expressive languages rich in both lexicon and grammar But here consensus ends and the theories presented here range from the compositional view that protolanguage was based primarily on words akin to the nouns and verbs etc we know today with only syntax lacking to the holophrastic view that protolanguage used protowords which had no meaningful subunits which might nonetheless refer to complex but significantly recurrent events The present volume does not decide the matter but it does advance our understanding The lack of any direct archaeological record of protolanguage might seem to raise insuperable difficulties However this volume exhibits the diversity of methodologies that can be brought to bear in developing datasets that can be used to advance the debate These articles were originally published as *Interaction Studies* 9 1 2008

How the Brain Got Language Michael A. Arbib, 2012-04-11 Unlike any other species humans can learn and use language This book explains how the brain evolved to make language possible through what Michael Arbib calls the Mirror System Hypothesis Because of mirror neurons monkeys chimps and humans can learn by imitation but only complex imitation which humans exhibit is powerful enough to support the breakthrough to language This theory provides a path from the openness of manual gesture which we share with nonhuman primates through the complex imitation of manual skills pantomime protosign communication based on conventionalized manual gestures and finally to protospeech The theory explains why we humans are as capable of learning sign languages as we are of learning to speak This fascinating book shows how cultural evolution took over from biological evolution for the transition from protolanguage to fully fledged languages The author explains how the brain mechanisms that made the original emergence of languages possible perhaps 100 000 years ago are still operative today in the way children acquire language in the way that new sign languages have emerged in recent decades and in the historical processes of language change on a time scale from decades to centuries Though the subject is complex this book is highly readable providing all the necessary background in primatology neuroscience and linguistics to make the book accessible to a general audience

The Emergence of Hybrid Grammars Enoch Oladé Aboh, 2015-08-27 Children are extremely gifted in acquiring their native languages but languages nevertheless change over time Why does this paradox exist In this study of creole languages Enoch Oladé Aboh addresses this question arguing that language acquisition requires contact between different linguistic sub systems that feed into the hybrid grammars that learners develop There is no qualitative difference between a child learning their language in a multilingual environment and a child raised in a monolingual environment In both situations children learn to master multiple linguistic sub systems that are in contact and may be combined to produce new variants These new variants are part of the inputs for subsequent learners Contributing to the debate on language

acquisition and change Aboh shows that language learning is always imperfect learners motivation is not to replicate the target language faithfully but to develop a system close enough to the target that guarantees successful communication and group membership

Language Evolution Rudolf Botha, 2016-03-02 How can we unravel the evolution of language given that there is no direct evidence about it Rudolf Botha addresses this intriguing question in his fascinating new book Inferences can be drawn about language evolution from a range of other phenomena serving as windows into this prehistoric process These include shell beads fossil skulls and ancestral brains modern pidgin and creole languages homesign systems and emergent sign languages modern motherese language use of modern hunter gatherers first language acquisition similarities between language and music and comparative animal behaviour The first systematic analysis of the Windows Approach it will be of interest to students and researchers in many disciplines including anthropology archaeology linguistics palaeontology and primatology as well as anyone interested in how language evolved

Scaffolded Language Emergence in the Classroom Donald Kiraly, Sarah Signer, 2017-04-14 This book introduces an approach to elementary adult foreign language learning that is based on theory in particular complexity thinking and social constructivism on the one hand and years of practice using various unconventional methods on the other A key assumption of the Scaffolded Language Emergence SLE approach is that a language need not be taught or learned in the conventional sense of these terms Instead it is argued language can emerge that is generate and maintain itself through authentic use The study and application of rules is considered most useful in later stages of learning while intuition and abductive thinking can be used very effectively to initiate or bootstrap naturalistic learning processes even in adults learning a foreign language
