Legal Knowledge Engineering:

Legal Knowledge Engineering A Valente,1995 **Knowledge Engineering: Practice and Patterns** Philipp Cimiano,H. Sofia Pinto,2010-11-18 Knowledge Management and Knowledge Engineering is a fascinating field of research these days In the beginning of EKAW the modeling and acquisition of knowledge was the privilege of or rather a burden for a few knowledge engineers familiar with knowledge engineering paradigms and knowledge representation formalisms While the aim has always been to model knowledge declaratively and allow for reusability the knowledge models produced in these early days were typically used in single and very specific applications and rarely changed Moreover these models were typically rather complex and they could be understood only by a few expert knowledge engineers This situation has changed radically in the last few years as clearly indicated by the following trends The creation of even formal knowledge is now becoming more and more collaborative Collaborative ontology engineering tools and social software platforms show the potential to leverage the wisdom of the crowds or at least of the many to lead to broader consensus and thus produce shared models which qualify better for reuse A trend can also be observed towards developing and publishing small but 2 3 4 high impact vocabularies e g FOAF DublinCore GoodRelations rather than complex and large knowledge models *Model Based Legal Knowledge Engineering* Nienke den Haan,1999 , **AI For Lawyers** Noah Waisberg,Alexander Hudek,2021-02-02 Discover how artificial intelligence can improve how your organization practices law with this compelling resource from the creators of one of the world's leading legal AI platforms AI for Lawyers How Artificial Intelligence is Adding Value Amplifying Expertise and Transforming Careers explains how artificial intelligence can be used to revolutionize your organization's operations Noah Waisberg and Dr Alexander Hudek a lawyer and a computer science Ph D who lead prominent legal AI business Kira Systems have written an approachable and insightful book that will help you transform how your firm functions AI for Lawyers explains how artificial intelligence can help your law firm Win more business and find more clients Better meet and exceed client expectations Find hidden efficiencies Better manage and eliminate risk Increase associate and partner engagement Whether focusing on small or big law AI for Lawyers is perfect for any lawyer who either feels uneasy about how AI might change law or is looking to capitalize on the evolving practice With contributions from experts in the fields of e Discovery legal research expert systems and litigation analytics it also belongs on the bookshelf of anyone who's interested in the intersection of law and technology **Law As Engineering** David Howarth,2013-01-01 David Howarth's Law as Engineering is a profound contribution to the law Evoking the level of originality associated with pioneering contributions to law and economics half a century ago Howarth's book aligns law not on economics but on engineering styles of thought and problem solving His analysis sheds deep light on a 21st century world where the work of transactional and legislative lawyers who design and build social structures and devices much as engineers do physical ones is becoming ever more important and complex with far reaching implications for both legal ethics and legal education Scott Boorman Yale

university US This is a brilliant highly original analysis of what lawyers actually do and what they ought to do in order to protect their clients and the public It will rescue lawyers from the kinds of behaviour that contributed to the financial crash It also points legal education and research in important new directions Sir Bob Hepple Professor QC FBA This book brings an important new perspective to a consideration of what lawyers do and of what they are for The implications explored in the book are an immensely valuable contribution to thinking on the future development of legal education and training It should be read by everyone responsible for recruiting or training others for the law whether in the public or the private sector Sir Stephen Laws KCB QC Hon LLD Hon First Parliamentary Counsel Law as Engineering proposes a radically new way of thinking about law as a profession and discipline concerned with design rather than with litigation and having much in common with engineering in the way it produces devices useful for its clients It uses that comparison to propose ways of improving legal design to advocate a transformation of legal ethics so that the profession learns from its role in the crash of 2008 and to reform legal education and research Offering a totally new perspective this book will be a fascinating read for law students and prospective law students legal academics across all sub fields lawyers in government especially those engaged in drafting legislation and policymakers
