Scientific History Elena Aronova, 2021-04-02 Increasingly scholars in the humanities are calling for a reengagement with the natural sciences Taking their cues from recent breakthroughs in genetics and the neurosciences advocates of big history are reassessing long held assumptions about the very definition of history its methods and its evidentiary base In Scientific History Elena Aronova maps out historians continuous engagement with the methods tools values and scale of the natural sciences by examining several waves of their experimentation that surged highest at perceived times of trouble from the crisis ridden decades of the early twentieth century to the ruptures of the Cold War The book explores the intertwined trajectories of six intellectuals and the larger programs they set in motion Henri Berr 1863 1954 Nikolai Bukharin 1888 1938 Lucien Febvre 1878 1956 Nikolai Vavilov 1887 1943 Julian Huxley 1887 1975 and John Desmond Bernal 1901 1971 Though they held different political views spoke different languages and pursued different goals these thinkers are representative of a larger motley crew who joined the techniques approaches and values of science with the writing of history and who created powerful institutions and networks to support their projects In tracing these submerged stories Aronova reveals encounters that profoundly shaped our knowledge of the past reminding us that it is often the forgotten parts of history that are the most revealing

The Past, Present, and Future of Integrated

History and Philosophy of Science Emily Herring, Kevin Matthew Jones, Konstantin S. Kiprijanov, Laura M

Sellers, 2019-05-14 Integrated History and Philosophy of Science iHPS is commonly understood as the study of science from a combined historical and philosophical perspective Yet since its gradual formation as a research field the question of how to suitably integrate both perspectives remains open This volume presents cutting edge research from junior iHPS scholars and

in doing so provides a snapshot of current developments within the field explores the connection between iHPS and other academic disciplines and demonstrates some of the topics that are attracting the attention of scholars who will help define the future of iHPS History as a Science: The Philosophy of R.G. Collingwood Jan van der Dussen, 1981-10-31 1 1

COLLINGWOOD'S RECEPTION Collingwood's scholarly reputation is a complicated and variegated affair For one has not only to make a distinction between his reputation during his life and after his premature death in 1943 but also between his reputation as a philosopher and as an archaeologist and historian Collingwood himself considered philosophy as his primary occupation and his work in archaeology and history as that of an amateur This work however reached the highest standards and his contributions to archaeology and history have always been appreciated accordingly Though Collingwood's reputation as the main expert on Roman Britain in the period between the two wars remains unchallenged modern developments in this field have inevitably superseded his contributions and made them primarily voices from a past period Philosophy was the other half of Collingwood's scholarly life In his own thinking there was always a close relationship between philosophy and archaeological and historical practice His interpreters have not always recognized this connection I have met archaeologists who were surprised to hear that Collingwood was a philosopher as well who either did not know that he had been a practising and philosophers archaeologist and historian or thought it no more than a private hobby Collingwood's reputation as a philosopher was very different from the one he gained in archaeology and history For in the philosophical climate at Oxford between the wars he was always an isolated figure

The Scientific Life Steven Shapin, 2009-08-01 Who are scientists What kind of people are they What capacities and virtues are thought to stand behind their considerable authority They are experts indeed highly respected experts authorized to describe and interpret the natural world and widely trusted to help transform knowledge into power and profit But are they morally different from other people The Scientific Life is historian Steven Shapin's story about who scientists are who we think they are and why our sensibilities about such things matter Conventional wisdom has long held that scientists are neither better nor worse than anyone else that personal virtue does not necessarily accompany technical expertise and that scientific practice is profoundly impersonal Shapin however here shows how the uncertainties attending scientific research make the virtues of individual researchers intrinsic to scientific work From the early twentieth century origins of corporate research laboratories to the high flying scientific entrepreneurship of the present Shapin argues that the radical uncertainties of much contemporary science have made personal virtues more central to its practice than ever before and he also reveals how radically novel aspects of late modern science have unexpectedly deep historical roots His elegantly conceived history of the scientific career and character ultimately encourages us to reconsider the very nature of the technical and moral worlds in which we now live Building on the insights of Shapin's last three influential books featuring an utterly fascinating cast of characters and brimming with bold and original claims The Scientific Life is essential reading for anyone wanting to reflect on late modern American culture and

Barcelona: An Urban History of Science and Modernity, 1888-1929 Oliver Hochadel, Agustí Nieto-Galan, 2016-04-14 The four decades between the two Universal Exhibitions of 1888 and 1929 were formative in the creation of modern Barcelona Architecture and art blossomed in the work of Antoni Gaudi and many others At the same time social unrest tore the city apart Topics such as art nouveau and anarchism have attracted the attention of numerous historians Yet the crucial role of science technology and medicine in the cultural makeup of the city has been largely ignored The ten articles of this book recover the richness and complexity of the scientific culture of end of the century Barcelona The authors explore a broad range of topics zoological gardens natural history museums amusement parks new medical specialities the scientific practices of anarchists and spiritists the medical geography of the urban underworld early mass media domestic electricity and astronomical observatories They pay attention to the agenda of the bourgeois elites but also to hitherto neglected actors users of electric technologies and radio amateurs patients in clinics and dispensaries collectors and visitors of museums working class audiences of public talks and female mediums Science technology and medicine served to exert social control but also to voice social critique Barcelona An urban history of science and modernity 1888 1929 shows that the city around 1900 was both a creator and facilitator of knowledge but also a space substantially transformed by the appropriation of this knowledge by its unruly citizens

Rethinking History, Science, and Religion Bernard Lightman, 2019-10-03 The historical interface between science and religion was depicted as an unbridgeable conflict in the last quarter of the nineteenth century Starting in the 1970s such a conception was too simplistic and not at all accurate when considering the totality of that relationship This volume evaluates the utility of the complexity principle in past present and future scholarship First put forward by historian John Brooke over twenty five years ago the complexity principle rejects the idea of a single thesis of conflict or harmony or integration or separation between science

and religion Rethinking History Science and Religion brings together an interdisciplinary group of scholars at the forefront of their fields to consider whether new approaches to the study of science and culture such as recent developments in research on science and the history of publishing the global history of science the geographical examination of space and place and science and media have cast doubt on the complexity thesis or if it remains a serviceable historiographical model
