Himalayan Dilemma Reconciling Development And Conservation:

The Himalayan Dilemma Jack D. Ives, Bruno Messerli, 1989 The Himalayas have experienced a population explosion which has stripped the mountain forests causing erosion landslides and massive damage downstream in the Ganges plain or so it is claimed by the dubious Theory of Himalayan Environmental Degradation In this book renowned authorities Jack D Ives and Bruno Messerli dissect and dismember the theory showing how its mistaken assumptions have misguided development policy and foreign aid for decades They challenge received notions of the causes and effects of deforestation and argue that mountain subsistence farmers far from being a source of the region s problems are in fact an integral part of the solution

[Access to Environmental Justice](#) Andrew Harding, 2007 Although it is commonly asserted that enhanced citizen participation results in better environmental policy and improved enforcement of environmental standards this hypothesis has rarely been subject to testing on a comparative basis The contributors to this book set out to study the extent to which citizens can and do exert influence over their urban environments through the legal and extra legal gateways in eleven countries spanning several continents as well as different climates levels and type of economic development and national legal and constitutional systems as well as exhibiting a different set of environmental problems One interviewee questioned about access to environmental justice dryly remarked that in his city there was no environment no justice and no access to either Yet this view as will be seen requires to be nuanced While few people will be surprised by the finding that legal gateways to environmental justice are largely ineffective the reasons for this are revealing but also the richness of detail and the comparisons between the different countries and also the positive aspects which surfaced in several instances were indeed both encouraging and sometimes surprising This book presents the first comparative survey of access to environmental justice and will be of considerable use to lawyers policy makers activists and scholars who are concerned with the environmental issues which so profoundly affect and afflict our habitat and conditions of social justice throughout the world

Mountain Environments Romola Parish, 2014-06-03 This book breaks the ground in Geographical texts by transcending a strictly regional or topical focus It presents the opportunities and constraints that mountains and their resources offer to local and global populations the impacts of environmental and economic change development and globalisation on mountain environments Part of the Ecogeography series edited by

Richard Hugget **Mountain Geography** Martin F. Price, Alton C. Byers, Donald A. Friend, Thomas Kohler, Larry W. Price, 2013-08-24 Mountains cover a quarter of the Earth's land surface and a quarter of the global population lives in or adjacent to these areas. The global importance of mountains is recognized particularly because they provide critical resources such as water, food, and wood, contain high levels of biological and cultural diversity, and are often places for tourism and recreation and of sacred significance. This major revision of Larry Price's book *Mountains and Man* 1981 is both timely and highly appropriate. The past three decades have been a period of remarkable progress in our understanding of mountains from an academic point of view. Of even greater importance is that society at large now realizes that mountains and the people who reside in them are not isolated from the mainstream of world affairs but are vital if we are to achieve an environmentally sustainable future. *Mountain Geography* is a comprehensive resource that gives readers an in-depth understanding of the geographical processes occurring in the world's mountains and the overall impact of these regions on culture and society as a whole. The volume begins with an introduction to how mountains are defined, followed by a comprehensive treatment of their physical geography: origins, climatology, snow and ice, landforms, and geomorphic processes, soils, vegetation, and wildlife. The concluding chapters provide an introduction to the human geography of mountains: attitudes toward mountains, people living in mountain regions and their livelihoods and interactions within dynamic environments, the diverse types of mountain agriculture, and the challenges of sustainable mountain development. **Study Week on a Modern Approach to the Protection of the Environment** G. B. Marini-Bettòlo, 2017-01-31 These Proceedings consider all aspects of the environmental problems facing the world today: scientific, social, economic, philosophical, and historical. Many of the discussions, which followed paper presentations, are included in the text. Along with scientific discussions of solutions to particular problems, the book argues for a new approach to thought and action in the use of natural resources. If a constructive global strategy towards the protection of the environment is to be socially compatible and economically sound, then it must be developed through an interdisciplinary approach which will avoid the impractical solutions which might be suggested by theoretical or unilateral considerations. Ecological, economic, social, and cultural research must be accompanied by the development of a new mentality of respect for the environment which will inculcate a reasonable and moderate use of natural resources. Resistance and the State David Gellner, 2007-04 There has been growing concern about failed states, and since the massacre of the Royal family in Nepal in 2001, increasing media attention has focused on the decline of the state and the rise of the Maoist rebels. This book explores the complex relationship between a modernizing developmentalist state and the people it professes to represent. *Ethnobotany, Volume 2* Dr. Suresh Kumar, 2019-04-11 Ethnobotany deals with the relationship between people and plants. Since ancient times, plants were used to cure all types of illness and diseases all over the world. The traditional knowledge of medicinal valued plants communicated from one generation to another generation and plays a significant role in the development of traditional medicines. The ethnobotanical research provides

information about medicinal plants that can cure fatal diseases This book has fourteen chapters that include various aspect of Ethnobotany viz Introduction to Ethnobotany Ethnobotany Past Present and Future Ethnobotany and Ayurveda Important Sacred Plants in India Grace of Butter tree Diversity Indigenous use of the Ethnomedicinal flora of various plants of India Ethnobotany and Modern system of Medicine Plants of folklore from myth to magic Different tribal committee of India and Historical journey and its prospective in India This book is highly relevant to innovated and enhance knowledge about Ethnobotany and helpful for undergraduate post graduate students research scholars and faculty The book incorporates chapters authored by eminent botanists who are working in the field of Ethnobotany since a long time Recent
