Hispalensis Lectures On Nuclear Physics:

The Hispalensis Lectures on Nuclear Physics Jose Miguel Arias, Manuel Lozano, 2004-11-23 Powerful new techniques including heavy ion and exotic beams are pushing the frontiers of nuclear physics and opening up a wealth of new fields of research After introductory chapters on theoretical and experimental aspects of nuclear collisions and beams Exotic Nuclear Physics offers articles by experienced lecturers on forefront topics in nuclear physics such as the conquest of the neutron and the proton drip lines nuclear astrophysics the equation of state of hypernuclear matter nuclear supersymmetry and chaotic motion in nuclei This volume continues the successful tradition of published lecture notes from the Hispalensis International Summer School It will benefit graduate students and lecturers in search of advanced material for self study and courses as well as researchers in search of a modern and comprehensive source of reference [The Hispalensis Lectures on Nuclear Physics](#)

Many-body Theory Of Correlated Fermion Systems - Proceedings Of The VI Hispalensis International Summer School Jose M Arias, M Isabel Gallardo, Manuel Lozano, 1998-05-30 The structure of matter is intimately related to the fundamental role played by many fermion systems The development in the last few decades of the microscopic many body theory of correlated fermion systems has been a fertile ground not only for spectacular achievements in basic science in various areas of research but also for technological applications Among the numerous phenomena discovered and studied in systems of many fermions one can cite the superconductivity in metals the superfluidity in ^3He nuclear matter and nuclei the quantum Hall effect the giant resonances in nuclei the Anderson localization and the metal insulator transition hole and electron diffusion in doped semiconductors etc All these phenomena can be understood only in terms of correlations occurring in many fermion systems and the formulation of the correct microscopic theory of each phenomenon has marked a milestone in pure science as well as the starting point for the exploitation of its potential technological applications It is likely that in the future further developments will take place in this field of basic science The Hispalensis International School is a summer school aimed mainly at young physicists both theoreticians and experimentalists engaged in research work at the predoctoral or recent postdoctoral level The objective of the School provide an opportunity for participants to come into contact with experienced researchers and hear their clear account of the state of the art of many body theories in nuclear physics as well as in related fields and the main future lines of development

Basic Concepts in Nuclear Physics: Theory, Experiments and Applications José-Enrique García-Ramos, Clara E. Alonso, María Victoria Andrés, Francisco Pérez-Bernal, 2016-05-17 This volume covers invited papers presented during the La R bida 2015 International Scientific Meeting on Nuclear Physics which can be considered heir of a well known series of triennial international summer schools on Nuclear Physics organized from 1982 till 2003 by the Basic Nuclear Physics group in the University of Sevilla The La R bida 2015 meeting offered to graduate students and young researchers a broad view of the field of Nuclear Physics The first invited speaker presented the state of the art of Relativistic Mean Field calculations The

second set of notes covers selected topics in gamma ray spectroscopy with exotic nuclei The third speaker presented an introduction to the subject of severe accidents in nuclear power plants In the fourth set of notes the author illustrated how to use laser spectroscopy to determine very important observables of atomic nuclei The fifth speaker devoted its notes to explain several aspects of neutrino physics Finally the sixth speaker presented an overview of nuclear medicine and radiodiagnostic In addition to this the inclusion of the posters and seminars presented by the students gives a fresh and ample perspective on the many different problems of interest nowadays for the Nuclear Physics community

Nuclei Far from Stability and Astrophysics Dorin N. Poenaru,Heinigerd Rebel,Jürgen Wentz,2012-12-06 A broad range of topics of current interest are discussed from nuclear structure at the edge of stability to nuclear astrophysics and cosmic ray physics at the highest energies Both the state of the art and basic background information are presented with a particular emphasis on interrelated research interests The writers are all active scientists who enjoy the highest international reputation They cover a range of problems of nuclear structure in particular those concerning exotic nuclei and their decay modes their relevance to nuclear reaction chains in stellar burning processes at various astrophysical sites and as yet unsolved questions concerning the origin acceleration mechanism energy spectrum and elemental composition of high energy cosmic rays Readership Postgraduate physicists interested in the development of modern radioactive beam facilities large array gamma ray and cosmic ray detectors and new theoretical tools
