Bone and Soft Tissue Tumors Mario Campanacci, 2013-06-29 to the first edition 1990 This is an extraordinary book by an extraordinary author Mario Campanacci first published three volumes on musculoskeletal neoplasms and other tumor like processes in bone and soft parts in Italian in 1981 1985 This book is an update and expansion of that book published for the first time in English In this book Dr Campanacci brings to the readers the vast experience in musculoskeletal oncology of the Rizzoli Orthopaedic Institute in Bologna where he has been head of

the Oncology Unit for many years As such he has had at his disposal the patient records radiographs and pathologic material dating back to 1905 In fact a visitor to the Institute will be shown the radiograph made of the first tumor case on record that of a giant cell tumor of the distal femur The wealth of clinical material that has been accumulated at the Rizzoli Institute with exquisite documentation and maintenance is a unique resource and testimonial to not only the author but his predecessors Under Campanacci's leadership the Institute has provided care to the majority of patients with neoplasms throughout Italy Over the past two decades a treatment team with extraordinary ability in radiology imaging pathology chemotherapy as well as orthopedic surgery has been assembled

Soft Tissue Tumors D. Harms, D. Schmidt, 2013-11-11
Soft tissue tumors are a very heterogeneous group of tumors in terms of histogenesis morphology cytogenetics molecular biology clinical manifestation and prognosis Their spectrum is fascinating for morphologists and basic scientists alike Yet precisely this variability in the morphologic manifestation of soft tissue tumors specifically their histologic and cytologic patterns presents great difficulties to any effort to categorize them Although many soft tissue tumors are today defined not only by histology but also by immunohistochemical cytogenetic and molecular biological findings the histogenesis of many soft tissue tumors in particular malignant ones continues to be unknown This is associated with the fact that the actual precursor cells that lead to these tumors have frequently not yet been identified For this reason the customary classification of malignant soft tissue tumors is primarily not histogenetic but actually according to the dominant phenotype however characteristic it is Of course an exact morphologic examination of soft tissue tumors continues to be an essential prerequisite for making a diagnosis and determining a therapy The use of a wide range of additional modern examination techniques however can make a substantial contribution toward more precisely defining the biological behavior of a tumor which without doubt can have therapeutic implications

Soft Tissue Sarcomas in Adults M. Bamberg, W. Hoffmann, D.K. Hossfeld, 2012-12-06
Sarcomas represent a group of rare tumors which arise from the largest tissue compartment of the body but account only for about 1 % of all malignancies Among this group of tumors soft tissue sarcomas in adults are in addition to osteosarcomas the most important In the diagnostic workup of soft tissue sarcomas modern radiological investigation methods such as CT and MRI techniques are being critically evaluated While it is widely accepted that the conventional stained microscopic specimen is still the cornerstone for properly planned treatment strategies immunohistochemistry has come to play an indispensable role in accurate classification Reviewing the surgical techniques the treatment of musculo skeletal malignancies especially of soft tissue sarcomas has changed considerably over the past decades While amputation used to be the surgical treatment of choice limb saving procedures have now become an important therapeutic modality in treating such lesions particularly in combination with percutaneous or interstitial radiotherapy Despite adequate local treatment many patients with soft tissue sarcomas will ultimately develop metastatic disease usually in the lungs For this reason effective adjuvant systemic treatment should be given simultaneously with or soon after treatment of local disease

The results of several randomized trials evaluating adjuvant chemotherapy have been reported in the meanwhile indicating improved disease free survival with a trend towards improved overall survival In disseminated disease drug combi VI Preface nations or single agents are used as palliative treatment and might help to improve survival in selected subgroups
