Jordan Pairs Lecture Notes In Mathematics 46:

Steinberg Groups for Jordan Pairs Ottmar Loos, Erhard Neher, 2020-01-10 The present monograph develops a unified theory of Steinberg groups independent of matrix representations based on the theory of Jordan pairs and the theory of 3 graded locally finite root systems The development of this approach occurs over six chapters progressing from groups with commutator relations and their Steinberg groups then on to Jordan pairs 3 graded locally finite root systems and groups associated with Jordan pairs graded by root systems before exploring the volume's main focus the definition of the Steinberg group of a root graded Jordan pair by a small set of relations and its central closedness Several original concepts such as the notions of Jordan graphs and Weyl elements provide readers with the necessary tools from combinatorics and group theory *Steinberg Groups for Jordan Pairs* is ideal for PhD students and researchers in the fields of elementary groups Steinberg groups Jordan algebras and Jordan pairs By adopting a unified approach anybody interested in this area who seeks an alternative to case by case arguments and explicit matrix calculations will find this book essential

Encyclopaedia of Mathematics, Supplement III Michiel Hazewinkel, 2007-11-23 This is the third supplementary volume to Kluwer's highly acclaimed twelve volume *Encyclopaedia of Mathematics* This additional volume contains nearly 500 new entries written by experts and covers developments and topics not included in the previous volumes These entries are arranged alphabetically throughout and a detailed index is included This supplementary volume enhances the existing twelve volumes and together these thirteen volumes represent the most authoritative comprehensive and up to date *Encyclopaedia of Mathematics* available

Kahler Spaces, Nilpotent Orbits, and Singular Reduction Johannes Huebschmann, 2004 For a stratified symplectic space a suitable concept of stratified Kahler polarization encapsulates Kahler polarizations on the strata and the behaviour of the polarizations across the strata and leads to the notion of stratified Kahler space which establishes an intimate relationship between nilpotent orbits singular reduction invariant theory reductive dual pairs Jordan triple systems symmetric domains and pre homogeneous spaces The closure of a holomorphic nilpotent orbit or equivalently the closure of the stratum of the associated pre homogeneous space of parabolic type carries a positive normal Kahler structure In the world of singular Poisson geometry the closures of principal holomorphic nilpotent orbits positive definite hermitian JTS and certain pre homogeneous spaces appear as different incarnations of the same structure The closure of the principal holomorphic nilpotent orbit arises from a semisimple holomorphic orbit by contraction Symplectic reduction carries a positive Kahler manifold to a positive normal Kahler space in such a way that the sheaf of germs of polarized functions coincides with the ordinary sheaf of germs of holomorphic functions Symplectic reduction establishes a close relationship between singular reduced spaces and nilpotent orbits of the dual groups Projectivization of holomorphic nilpotent orbits yields exotic positive stratified Kahler structures on complex projective spaces and on certain complex projective varieties including complex projective quadrics The space of in general twisted representations of the fundamental group of a closed

surface in a compact Lie group or equivalently a moduli space of central Yang Mills connections on a principal bundle over a surface inherits a positive normal stratified Kahler structure Physical examples are provided by certain reduced spaces arising from angular momentum zero

Nonassociative Mathematics and its Applications Petr Vojtěchovský, Murray R. Bremner, J. Scott Carter, Anthony B. Evans, John Huerta, Michael K. Kinyon, G. Eric Moorhouse, Jonathan D. H.

Smith, 2019-01-14 Nonassociative mathematics is a broad research area that studies mathematical structures violating the associative law $x(yz) \neq (xy)z$ The topics covered by nonassociative mathematics include quasigroups loops Latin squares Lie algebras Jordan algebras octonions racks quandles and their applications This volume contains the proceedings of the Fourth Mile High Conference on Nonassociative Mathematics held from July 29 August 5 2017 at the University of Denver Denver Colorado Included are research papers covering active areas of investigation survey papers covering Leibniz algebras self distributive structures and rack homology and a sampling of applications ranging from Yang Mills theory to the Yang Baxter equation and Laver tables An important aspect of nonassociative mathematics is the wide range of methods employed from purely algebraic to geometric topological and computational including automated deduction all of which play an important role in this book

Combinatorial Algebraic Geometry Aldo Conca, Sandra Di Rocco, Jan Draisma, June Huh, Bernd Sturmfels, Filippo Viviani, 2014-05-15 Combinatorics and Algebraic Geometry have enjoyed a fruitful interplay since the nineteenth century Classical interactions include invariant theory theta functions and enumerative geometry The aim of this volume is to introduce recent developments in combinatorial algebraic geometry and to approach algebraic geometry with a view towards applications such as tensor calculus and algebraic statistics A common theme is the study of algebraic varieties endowed with a rich combinatorial structure Relevant techniques include polyhedral geometry free resolutions multilinear algebra projective duality and compactifications

Jordan Algebras Wilhelm Kaup, Kevin McCrimmon, Holger P. Petersson, 2011-05-02 The series is aimed specifically at publishing peer reviewed reviews and contributions presented at workshops and conferences Each volume is associated with a particular conference symposium or workshop These events cover various topics within pure and applied mathematics and provide up to date coverage of new developments methods and applications

Holomorphic Automorphism Groups in Banach Spaces J.M. Isidro, L.L. Stachó, 2011-08-18 Holomorphic Automorphism Groups in Banach Spaces

Applicable Mathematics in the Golden Age J. C. Misra, 2003 This comprehensive volume introduces educational units dealing with the various emerging branches of Applicable Mathematics It consists of chapters that deal with the major areas of pure mathematics and emphasises the cross field application of the skills conveyed within

Deformation of Artinian Algebras and Jordan Type Anthony Iarrobino, Pedro Macias Marques, Maria Evelina Rossi, Jean VallŠs, 2024-09-06 This volume contains the proceedings of the AMS EMS SMF Special Session on Deformations of Artinian Algebras and Jordan Type held July 18 22 2022 at the Universit Grenoble Alpes Grenoble France Articles included are a survey and open problems on deformations and relation to the Hilbert scheme a survey of commuting

nilpotent matrices and their Jordan type and a survey of Specht ideals and their perfection in the two rowed case Other articles treat topics such as the Jordan type of local Artinian algebras Waring decompositions of ternary forms questions about Hessians a geometric approach to Lefschetz properties deformations of codimension two local Artin rings using Hilbert Burch matrices and parametrization of local Artinian algebras in codimension three Each of the articles brings new results on the boundary of commutative algebra and algebraic geometry

Cubic Action of a Rank One Group Matthias Grüninger, 2022-04-08 View the abstract *Structure Theory of Jordan Algebras* Nathan Jacobson, 1981 Matrix Convolution Operators on Groups Cho-Ho Chu, 2008-08-15 In the last decade convolution operators of matrix functions have received unusual attention due to their diverse applications This monograph presents some new developments in the spectral theory of these operators The setting is the L_p spaces of matrix valued functions on locally compact groups The focus is on the spectra and eigenspaces of convolution operators on these spaces defined by matrix valued measures Among various spectral results the L_2 spectrum of such an operator is completely determined and as an application the spectrum of a discrete Laplacian on a homogeneous graph is computed using this result The contractivity properties of matrix convolution semigroups are studied and applications to harmonic functions on Lie groups and Riemannian symmetric spaces are discussed An interesting feature is the presence of Jordan algebraic structures in matrix harmonic functions Algebras, Groups, and Geometries, 1984 *Bruhat-Tits Theory* Tasho Kaletha, Gopal Prasad, 2023-01-26 Bruhat Tits theory is an important topic in number theory representation theory harmonic analysis and algebraic geometry This book gives the first comprehensive treatment of this theory over discretely valued Henselian fields It can serve both as a reference for researchers in the field and as a thorough introduction for graduate students and early career mathematicians Part I of the book gives a review of the relevant background material touching upon Lie theory metric geometry algebraic groups and integral models Part II gives a complete detailed and motivated treatment of the core theory as well as an axiomatic summary of Bruhat Tits theory that suffices for the main applications Part III treats modern topics that have become important in current research Part IV provides a few sample applications of the theory The appendices contain further details on the topic of integral models including a detailed study of integral models Algebra, Mathematical Logic, Number Theory, Topology Ivan Matveevich Vinogradov, 1986 Collection of papers on the current research in algebra mathematical logic number theory and topology **Michigan Mathematical Journal**, 1992 **Physical Applications of Homogeneous Balls** Yaakov Friedman, 2013-01-08 One of the mathematical challenges of modern physics lies in the development of new tools to efficiently describe different branches of physics within one mathematical framework This text introduces precisely such a broad mathematical model one that gives a clear geometric expression of the symmetry of physical laws and is entirely determined by that symmetry The first three chapters discuss the occurrence of bounded symmetric domains BSDs or homogeneous balls and their algebraic structure in physics The book further provides a discussion of how to obtain a triple

algebraic structure associated to an arbitrary BSD the relation between the geometry of the domain and the algebraic structure is explored as well The last chapter contains a classification of BSDs revealing the connection between the classical and the exceptional domains The Yokohama Mathematical Journal ,1993 *Mathematical Reviews* ,2005
