Learning From Data Artificial Intelligence And Statistics V:

Learning from Data Doug Fisher, Hans-J. Lenz, 1996-05-02 This volume contains a revised collection of papers originally presented at the Fifth International Workshop on Artificial Intelligence and Statistics in 1995 The topics represented in this volume are diverse and include natural language application causality and graphical models classification learning knowledge discovery and exploratory data analysis The chapters illustrate the rich possibilities for interdisciplinary study at the interface of artificial intelligence and statistics The chapters vary in the background that they assume but moderate familiarity with techniques of artificial intelligence and statistics is desirable in most cases

Learning from Data Doug Fisher, Hans J. Lenz, 1996-05-01 *Database Theory and Application* Dominik Slezak, Yanchun Zhang, 2009-11-25 As future generation information technology FGIT becomes specialized and fragmented it is easy to lose sight that many topics in FGIT have common threads and because of this advances in one discipline may be transmitted to others Presentation of recent results obtained in different disciplines encourages this interchange for the advancement of FGIT as a whole Of particular interest are hybrid solutions that combine ideas taken from multiple disciplines in order to achieve something more significant than the sum of the individual parts Through such hybrid philosophy a new principle can be discovered which has the propensity to propagate throughout multifaceted disciplines FGIT 2009 was the first mega conference that attempted to follow the above idea of hybridization in FGIT in a form of multiple events related to particular disciplines of IT conducted by separate scientific committees but coordinated in order to expose the most important contributions It included the following international conferences Advanced Software Engineering and Its Applications ASEA Bio Science and Bio Technology BSBT Control and Automation CA Database Theory and Application DTA Disaster Recovery and Business Continuity DRBC published independently Future Generation Communication and Networking FGCN that was combined with Advanced Communication and Networking ACN Grid and Distributed Computing GDC Multimedia Computer Graphics and Broadcasting MulGraB Security Technology SecTech Signal Processing Image Processing and Pattern Recognition SIP and e Service Science and Technology UNESST

Probabilistic Graphical Models Daphne Koller, Nir Friedman, 2009-07-31 A general framework for constructing and using probabilistic models of complex systems that would enable a computer to use available information for making decisions Most tasks require a person or an automated system to reason to reach conclusions based on available information The framework of probabilistic graphical models presented in this book provides a general approach for this task The approach is model based allowing interpretable models to be constructed and then manipulated by reasoning algorithms These models can also be learned automatically from data allowing the approach to be used in cases where manually constructing a model is difficult or even impossible Because uncertainty is an inescapable aspect of most real world applications the book focuses on probabilistic models which make the uncertainty explicit and provide models that are more faithful to reality Probabilistic Graphical Models discusses a variety of models spanning Bayesian networks

undirected Markov networks discrete and continuous models and extensions to deal with dynamical systems and relational data For each class of models the text describes the three fundamental cornerstones representation inference and learning presenting both basic concepts and advanced techniques Finally the book considers the use of the proposed framework for causal reasoning and decision making under uncertainty The main text in each chapter provides the detailed technical development of the key ideas Most chapters also include boxes with additional material skill boxes which describe techniques case study boxes which discuss empirical cases related to the approach described in the text including applications in computer vision robotics natural language understanding and computational biology and concept boxes which present significant concepts drawn from the material in the chapter Instructors and readers can group chapters in various combinations from core topics to more technically advanced material to suit their particular needs

Machine Learning And Perception Guido Tascini, Primo

Zingaretti, Floriana Esposito, Vito Roberto, 1996-05-06 The present well established study of planets orbiting stars other than our Sun the exoplanets was reviewed by the author in his earlier book Wandering Stars This new and exciting field of study has expanded quickly particularly due to technological advances in both Earth based telescopes and more recently in the application of automatic space vehicles Well over 300 exoplanets have now been catalogued each of mass comparable to or greater than those of the major planets of the Solar System Earth sized bodies remain out of reach for the present The data obtained so far show that the distribution of major planets in our Solar System is the exception rather than the rule contrary to earlier expectations A few exoplanet systems do nevertheless give the promise of broadly Solar System conditions with the possibility of Earth like components in appropriate orbits This immediately raises the age old question of whether there can be life elsewhere in the Universe and whether this might involve advanced technologically capable beings like ourselves The topic is explored in this workbook To gain a balanced perspective on these matters the arguments are set against the broad panorama of the Universe on the one hand and on the evolution of life on Earth leading to Homo sapiens on the other More than this the apparatus for achieving technological excellence such as the development of appropriate energy sources and the invention of the required mathematical skills is also included This wide range of arguments is unusual This notebook cum workbook provides a firm and comprehensive introduction to these studies It is written by an expert in the field for readers beginning to ponder these questions seriously It is hoped that the reader will extend the arguments further as the subject develops A special feature is an extensive compendium to act as the beginnings of a personal inventory The Inverted Bowl is in a very real sense a companion to Wandering Stars a

Abstraction, Reformulation, and Approximation Berthe Y. Choueiry, Toby Walsh, 2003-06-26 This volume contains the proceedings of SARA 2000 the fourth Symposium on Abstraction Reformulations and Approximation SARA The conference was held at Horseshoe Bay Resort and Conference Club Lake LBJ Texas July 26 29 2000 just prior to the AAAI 2000 conference in Austin Previous SARA conferences took place at Jackson Hole in Wyoming 1994 Ville d Est erel in Quebec 1995 and Asilomar in California 1998 The symposium grew out of a series of workshops on abstraction approximation and reformulation that had taken place alongside AAAI since 1989 This year s symposium was actually scheduled to take place at

Lago Vista Clubs Resort on Lake Travis but due to the resort's failure to pay taxes the conference had to be moved late in the day. This mischance engendered eleventh hour reformulations, abstractions, and resource re-allocations of its own. Such are the perils of organizing a conference. This is the first SARA for which the proceedings have been published in the LNAI series of Springer Verlag. We hope that this is a reflection of the increased maturity of the field and that the increased visibility brought by the publication of this volume will help the discipline grow even further.

Abstractions, reformulations, and approximations. AI have found applications in a variety of disciplines and problems including automatic programming, constraint satisfaction, design, diagnosis, machine learning, planning, qualitative reasoning, scheduling, resource allocation, and theorem proving. The papers in this volume capture a cross section of these application domains.

Advances in Artificial Intelligence - IBERAMIA 2002 Francisco J. Garijo, José C. Riquelme, Miguel Toro Bonilla, 2003-06-30. The 8th Ibero American Conference on Artificial Intelligence IBERAMIA 2002 took place in Spain for the second time in 14 years; the first conference was organized in Barcelona in January 1988. The city of Seville hosted this 8th conference, giving the participants the opportunity of enjoying the richness of its historical and cultural atmosphere. Looking back over these 14 years, key aspects of the conference such as its structure, organization, the quantity and quality of submissions, the publication policy, and the number of attendants have significantly changed. Some data taken from IBERAMIA 88 and IBERAMIA 2002 may help to illustrate these changes. IBERAMIA 88 was planned as an initiative of three Ibero American AI associations: the Spanish Association for AI (AEPIA), the Mexican Association for AI (SMIA), and the Portuguese Association for AI (APIA). The conference was organized by the AEPIA staff, including the AEPIA president José Cuena, the secretary Felisa Verdejo, and other members of the AEPIA board. The proceedings of IBERAMIA 88 contain 22 full papers grouped into six areas: knowledge representation and reasoning, learning, AI tools, expert systems, language, and vision. Papers were written in the native languages of the participants: Spanish, Portuguese, and Catalan. Twenty extended abstracts describing ongoing projects were also included in the proceedings.
