Learning Music Theory with Logic, Max, and Finale Geoffrey Kidde, 2020-02-20 Learning Music Theory with Logic Max and Finale is a groundbreaking resource that bridges the gap between music theory teaching and the world of music software programs Focusing on three key programs the Digital Audio Workstation DAW Logic the Audio Programming Language APL Max and the music printing program Finale this book shows how they can be used together to learn music theory It provides an introduction to core music theory concepts and shows how to develop programming skills alongside music theory skills Software tools form an essential part of the modern musical environment laptop musicians today can harness incredibly powerful tools to create record and manipulate sounds Yet these programs on their own don't provide musicians with an understanding of music notation and structures while traditional music theory teaching doesn't fully engage with technological capabilities With clear and practical applications this book demonstrates how to use DAWs APLs

and music printing programs to create interactive resources for learning the mechanics behind how music works Offering an innovative approach to the learning and teaching of music theory in the context of diverse musical genres this volume provides game changing ideas for educators practicing musicians and students of music The author s website at <http://www.geoffreykidde.com> includes downloadable apps that support this book

[Music and Child Development](#) J.Craig Peery,Irene Weiss Peery,Thomas W. Draper,2012-12-06 I acknowledge a deep debt of gratitude to my coeditors my wife Irene and my friend and colleague Tom Draper They have worked with diligence and insight to bring this work to completion They have delegated the task of writing the Preface to me As the scientific study of human development matures it is not only natural but it is necessary to reach beyond understanding the ways humans develop capacities to study the ways emerging capacities fit into the larger sphere of human undertakings Music is one of the most significant of those endeavors As I attend the several piano competitions that are on my agenda each year and see children seated at the keyboard drawing forth the magnificent sounds of Bach Chopin and Ravel I am always a little awed Surely it seems to me the piano is among the best of man s creations the creative energies of great composers are among mankind s greatest expressions and encouraging children to associate themselves seriously with both instrument and composer can be one of the great blessings to their young lives and by association to the larger society Music touches the entire range of our lifespan on a daily basis Involving children with music and music training has high market and common sense validity Parents understand intuitively that children will benefit and their lives will be enriched if they are influenced by music and music training

The Evolution of Rhythm Cognition: Timing in Music and Speech Andrea Ravignani,Henkjan Honing,Sonja A. Kotz,2018-07-24 Human speech and music share a number of similarities and differences One of the closest similarities is their temporal nature as both i develop over time ii form sequences of temporal intervals possibly differing in duration and acoustical marking by different spectral properties which are perceived as a rhythm and iii generate metrical expectations Human brains are particularly efficient in perceiving producing and processing fine rhythmic information in music and speech However a number of critical questions remain to be answered Where does this human sensitivity for rhythm arise How did rhythm cognition develop in human evolution How did environmental rhythms affect the evolution of brain rhythms Which rhythm specific neural circuits are shared between speech and music or even with other domains Evolutionary processes long time scales often prevent direct observation understanding the psychology of rhythm and its evolution requires a close fitting integration of different perspectives First empirical observations of music and speech in the field are contrasted and generate testable hypotheses Experiments exploring linguistic and musical rhythm are performed across sensory modalities ages and animal species to address questions about domain specificity development and an evolutionary path of rhythm Finally experimental insights are integrated via synthetic modeling generating testable predictions about brain oscillations underlying rhythm cognition and its evolution Our understanding of the cognitive neurobiological and evolutionary bases of

rhythm is rapidly increasing However researchers in different fields often work on parallel potentially converging strands with little mutual awareness This research topic builds a bridge across several disciplines focusing on the cognitive neuroscience of rhythm as an evolutionary process It includes contributions encompassing although not limited to 1 developmental and comparative studies of rhythm e g critical acquisition periods innateness 2 evidence of rhythmic behavior in other species both spontaneous and in controlled experiments 3 comparisons of rhythm processing in music and speech e g behavioral experiments systems neuroscience perspectives on music speech networks 4 evidence on rhythm processing across modalities and domains 5 studies on rhythm in interaction and context social affective etc 6 mathematical and computational e g connectionist symbolic models of rhythmicity as an evolved behavior
