Children's Reading and Spelling Terezinha Nunes,Peter Bryant,2009-02-09 This book extends models of early literacy analyzing how children s reading and spelling skills develop throughout their school career An account of how a child s reading and spelling develop which goes beyond the early years Shows that there are radical changes in the way children read and spell as they get older Describes a new theory about the learning that goes on in the later stages of reading and spelling Makes clear the educational implications of this theory The authors research has previously contributed to the literacy hour a government initiative to improve the teaching of literacy skills in UK schools    Language Development and Learning to Read Diane McGuinness,2006-08-11 Research on reading has tried and failed to account for wide disparities in reading skill even among children taught by the same method Why do some children learn to read easily and quickly while others in the same classroom and taught by the same teacher don t learn to read at all In Language Development and Learning to Read Diane McGuinness examines scientific research that might explain these disparities She focuses on reading predictors analyzing the effect individual differences in specific perceptual linguistic and cognitive skills may have on a child s ability to read Because of the serious methodological problems she finds in the existing research on reading many of the studies McGuinness cites come from other fields developmental psychology psycholinguistics and the speech and hearing sciences and provide a new perspective on which language functions matter most for reading and academic success McGuinness first examines the phonological development theory the theory that phonological awareness follows a developmental path from words to syllables to phonemes which has dominated reading research for thirty years and finds that research evidence from other disciplines does not support the theory McGuinness then looks at longitudinal studies on the development of general language function and finds a tantalizing connection between core language functions and reading success Finally she analyzes mainstream reading research which links reading ability to specific language skills and the often flawed methodology used in these studies McGuinness s analysis shows the urgent need for a shift in our thinking about how to achieve reading success    Learning and Cognition Vibeke Grøver Aukrust,2011-02-17 This collection of 58 articles from the recently published third edition of the INTERNATIONAL ENCYCLOPEDIA OF EDUCATION focus on learning memory attention problem solving concept formation and language Learning and cognition is the foundation of cognitive psychology and encompasses many topics including attention memory categorization etc Most books in the area either focus on one subtopic in depth e g an entire book on memory or cover the gamut of subjects in a series of long technical handbook like chapters This concise reference offers researchers and professors teaching in the area a new take on the material that is comprehensive in breadth but lighter in depth focusing on main findings established facts and minimizing the amount of space taken up by large multi volume references An introduction to a complex field via summaries of main topics in this discipline Contains contributions from the foremost international researchers in the field Makes content

Das, 2013-11-11 Although a number of books have appeared on learning disabilities we feel that the present book has two distinct features which are not found in most others. It is multidisciplinary and it combines theory with practice. A group of researchers from the disciplines of Psychology including medical psychology and information processing, Reading, Special Education and Physical Education interacted with each other before and after their presentations in a conference November 1980 at the University of Alberta Edmonton Canada and then wrote their chapters for this book. We hope that their chapters were enriched by the discussions and arguments which happened in formal and informal settings during the authors' stay in Edmonton. Dr Leong could not attend the conference but was asked to write the introductory chapter for the book. The contributors to this volume have been involved with basic research as well as with clinical and educational research in learning disabilities. Some of them have a theoretical rather than a practical interest. However a serious interest in a handicapping condition perhaps compels one to consider its amelioration no matter how pure is the researcher. It is because of such a feeling that those who do basic research have suggested procedures for applying their findings. The result is a balanced product entailing theory and practice      **Reading Freedom** Hunter A. Calder, 2000
