architecture Massimo Mucci, 2022-03-25 Nell'ampia produzione dell'architetto americano Lebbeus Woods 1940-2012 alcuni progetti risalenti alla prima metà degli anni Novanta del secolo scorso sono particolarmente rappresentativi del suo impegno nel ridefinire il ruolo politico dell'architettura nei processi di trasformazione della società I tre progetti per le città di Zagabria Sarajevo e L'Avana si distinguono per la ricerca originale e innovativa svolta dall'architetto su concetti quali freespace free zone heterarchical city fino ad arrivare a temi progettuali di più ampia portata Lo studio di questi progetti attraverso l'uso della rappresentazione dell'architettura come strumento di analisi compositiva permette di addentrarsi nelle procedure ideative e grafiche del progettista e di chiarire i punti di contatto e le distanze rispetto alle tendenze architettoniche di quegli anni I lavori grafici sono qui considerati espressioni di un pensiero teorico critico sull'architettura elaborato attraverso l'uso esplorativo simultaneo del disegno e della scrittura intrecciati tra loro su più livelli semantici in una catena di invenzioni figurative Questo permette di riconoscere nell'opera di Woods l'uso del disegno come progetto e di capire aspetti non conosciuti del suo linguaggio architettonico approfondendone la genesi compositiva all'interno di un quadro culturale caratterizzato da temi a lui vicini come quello della experimental architecture il Deco struttivismo la trasformazione

Lebbeus Woods: Exquisite Experiments, Early Years Aleksandra Wagner, Neil Spiller, 2024-03-18 American architect Lebbeus Woods 1940 2012 remains a quiet hero not only among his colleagues but also for architectural students intrigued by the ideas and fluent beauty of his powerful graphic verve as well as of his writing His projects from the mid 1980s until the end of his life have been widely published However this AD in collaboration with the Estate of Lebbeus Woods explores the earlier period beginning in the late 1960s when Woods was honing his draughtsmanship and theoretical positions while experimenting with a variety of themes and different modes of expression When he burst onto the international architectural scene with a solo exhibition and accompanying catalogue *Lebbeus Woods Origins* at the Architectural Association London in 1985 some wondered how anyone could emerge so fully formed from nowhere Working against the logic of nowhere this issue charts his early trajectory through the largely unpublished drawings and texts linking them with what came after Aiming to generate new scholarship its roster of international interdisciplinary critics and commentators offer a new understanding of Woods's work and of his formative years also shining a light on how we might think about the early work of any architect's career Contributors Joseph Becker Aaron Betsky Peter Cook Mark Dorrian Riet Eeckhout Kevin Erickson Joerg Gleiter Sharon Irish Eliyahu Keller Lawrence Rinder Ashley Simone Ben Sweeting

Architecture Thomas A. Dutton, Lian Hurst Mann, **The Architectural Model** Matthew Mindrup, 2019-10-08 An investigation of different uses for the architectural model through history as sign souvenir funerary object didactic tool medium for design and architect's muse For more than five hundred years architects have employed three dimensional models as tools to test refine and illustrate their ideas But as Matthew Mindrup shows the uses of physical architectural models extend beyond mere representation An architectural model can also simulate instruct inspire and generate architectural designs It can be among other things sign souvenir toy funerary object didactic tool medium or muse In this book Mindrup surveys the history of architectural models by investigating their uses both theoretical and practical Tracing the architectural model's development from antiquity to the present Mindrup also offers an interpretive framework for understanding each of its applications in the context of time and place He first examines models meant to portray extant fantastic or proposed structures describing their use in ancient funerary or dedicatory practices in which models are endowed with magical power as a medium for architectural reverie and inspiration and as prototypes for twentieth century experimental designs Mindrup then considers models that exemplify certain architectural uses exploring the influence of Leon Battista Alberti's dictum that models be simple lest they distract from the architect's ideas analyzing the model as a generative tool and investigating allegorical analogical and anagogical interpretations of models Mindrup's histories show how the model can be a surrogate for the architectural structure itself or for the experience of its formal tactile and sensory complexity and beyond that that the manipulation play experimentation and dreaming enabled by models allow us to imagine architecture in new ways □□□□□□□□ Lebbeus Woods, 1991 **Soft Living Architecture** Rachel Armstrong, 2018-09-06 Soft Living Architecture explores the invention of new architectures based on living processes It crafts a unique intersection between two fast developing disciplines biomimicry and biodesign in architecture and bioinformatics and natural computing in the natural sciences This is the first book to examine both the theory and methodology of architecture and design working directly with the natural world It explores a range of approaches from the use of life like systems in building design to the employment of actual growing and living cell and tissue cultures as architectural materials creating architecture that can change learn and grow with us The use of living architecture is cutting edge and speculative yet it is also inspiring a growing number of designers worldwide to adopt alternative perspectives on sustainability and environmental design The book examines the ethical and theoretical issues arising alongside case studies of experimental practice to explore what we mean by natural in the Anthropocene and raise deep questions about the nature of design and the design of nature This provocative and at times controversial book shows why it will become ever more necessary to embrace living processes in architecture if we are to thrive in a sustainable future **Mural Decoration in the Theban Necropolis** Betsy M. Star Ark Rachel Armstrong, 2016-11-13 As space ventures have become more numerous leading scientists and theorists have offered ways of building a living habitat in a hostile environment taking an ecosystems view of space colonization The contributors to this volume take a radical multi disciplinary view of the challenge of human space colonization through the ongoing project Persephone This book fundamentally challenges prevalent ideas about sustainability and proposes a new approach to resource austerity and conservation and providing truly sustainable approaches that are life promoting Readers will learn the details of the plans for Persephone a real project that is part of the company Icarus Interstellar's plans for the design and engineering of a living interior on a worldship to be constructed in Earth's orbit within 100 years Although the timeframe itself is only an estimate since it is contingent on many significant developments including funding and technological advances the industry consensus is that within 100 years we will see manned space exploration beyond our solar system This notion is shared by organizations such as the Initiative for Interstellar Studies and the DARPA funded 100 year starship project This book specifically develops the principles for the construction of a living habitat within a worldship a multi generational starship that contains its own world that supports colonists as it travels across great distances between stars at a speed much slower than light Far from being a sterile industrial setup such as the ISS or even being a bucolic suburbia as proposed by Gerard O'Neill in the 1970s this worldship will provide the pre conditions for sustaining life beyond Earth's

environment which may also lead to the evolution of non terrestrial ecologies Drawing on the principles of ecopoiesis and insights offered by the Biosphere 2 experiment that demonstrated what we have to learn about ecosystem construction this book proposes first designing the soils of such a space It should then be possible to set up the conditions that a first generation of colonists may experience in leaving our solar system to find new worlds to settle perhaps in spreading life throughout the universe Although the book takes a unique view of ecology and sustainability within the setting of a traveling starship it is equally concerned with the human experience on artificial worlds Chapters come from a range of multi disciplinary thinkers who shed light on the brave new future ahead from different angles
