Lectures On P Divisible Groups Lecture Notes In Mathematics Ser:

Lectures on p-Divisible Groups M. Demazure, 2006-11-15 Lectures given at the Tata Institute of Fundamental Research Bombay in January February 1971 **Graph Theory and Applications** Aldridge Knight Bousfield, Michel Demazure, 1964 **Lectures on Hilbert Modular Varieties and Modular Forms** Eyal Zvi Goren, 2002 This book is devoted to certain aspects of the theory of p adic Hilbert modular forms and moduli spaces of abelian varieties with real multiplication The theory of p adic modular forms is presented first in the elliptic case introducing the reader to key ideas of N M Katz and J P Serre It is re interpreted from a geometric point of view which is developed to present the rudiments of a similar theory for Hilbert modular forms The theory of moduli spaces of abelian varieties with real multiplication is presented first very explicitly over the complex numbers Aspects of the general theory are then exposed in particular local deformation theory of abelian varieties in positive characteristic The arithmetic of p adic Hilbert modular forms and the geometry of moduli spaces of abelian varieties are related This relation is used to study q expansions of Hilbert modular forms on the one hand and stratifications of moduli spaces on the other hand The book is addressed to graduate students and non experts It attempts to provide the necessary background to all concepts exposed in it It may serve as a textbook for an advanced graduate course *p-adic Differential Equations* Kiran S. Kedlaya, 2022-06-09 Now in its second edition this volume provides a uniquely detailed study of P adic differential equations Assuming only a graduate level background in number theory the text builds the theory from first principles all the way to the frontiers of current research highlighting analogies and links with the classical theory of ordinary differential equations The author includes many original results which play a key role in the study of P adic geometry crystalline cohomology P adic Hodge theory perfectoid spaces and algorithms for L functions of arithmetic varieties This updated edition contains five new chapters which revisit the theory of convergence of solutions of P adic differential equations from a more global viewpoint introducing the Berkovich analytification of the projective line defining convergence polygons as functions on the projective line and deriving a global index theorem in terms of the Laplacian of the convergence polygon Geometric Aspects of Dwork Theory Alan Adolphson, Francesco Baldassarri, Pierre Berthelot, Nicholas Katz, Francois Loeser, 2008-08-22 This two volume book collects the lectures given during the three months cycle of lectures held in Northern Italy between May and July of 2001 to commemorate Professor Bernard Dwork 1923 1998 It presents a wide ranging overview of some of the most active areas of contemporary research in arithmetic algebraic geometry with special emphasis on the geometric applications of the p adic analytic techniques originating in Dwork s work their connection to various recent cohomology theories and to modular forms The two volumes contain both important new research and illuminating survey articles written by leading experts in the field The book will provide an indispensable resource for all those wishing to approach the frontiers of research in arithmetic algebraic geometry **Moduli of Abelian Varieties** C. Faber, 2001-03 Abelian varieties and their moduli are a central topic of

increasing importance in today's mathematics Applications range from algebraic geometry and number theory to mathematical physics The present collection of 17 refereed articles originates from the third Texel Conference held in 1999 Leading experts discuss and study the structure of the moduli spaces of abelian varieties and related spaces giving an excellent view of the state of the art in this field The book will appeal to pure mathematicians especially algebraic geometers and number theorists but will also be relevant for researchers in mathematical physics

Moduli of Curves and Abelian Varieties Carel Faber, Eduard Looijenga, 2012-12-06 The present volume with contributions of R Dijkgraaf C Faber G van der Geer R Rain E Looijenga and F Oort originates from the Dutch Intercity Seminar on Moduli year 1995-96 Some of the articles here were discussed in preliminary form in the seminar others are completely new Two introductory papers on moduli of abelian varieties and on moduli of curves accompany the articles Topics include a stratification of a moduli space of abelian varieties in positive characteristic and the calculation of the classes of the strata tautological classes for moduli of abelian varieties as well as for moduli of curves correspondences between moduli spaces of curves locally symmetric families of curves and jacobians and the role of symmetric product spaces in quantum field theory string theory and matrix theory This Intercity Seminar is part of the long term project Algebraic curves and Riemann surfaces geometry arithmetic and applications sponsored by the Netherlands Organization for Scientific Research NWO that has been running since 1994 Its ancestry can be traced back to joint activities in the seventies if not earlier which as of 1980 had evolved into active biweekly research seminars These have been a focal point of Dutch algebraic geometry and singularity theory since We are grateful to NWO for its support for the project C F thanks the Max Planck Institut für Mathematik Bonn for support during the final stages of the preparation of this volume
