Algorithms and Ordering Heuristics for Distributed Constraint Satisfaction Problems Mohamed Wahbi, 2013-07-01 DisCSP Distributed Constraint Satisfaction Problem is a general framework for solving distributed problems arising in Distributed Artificial Intelligence A wide variety of problems in artificial intelligence are solved using the

constraint satisfaction problem paradigm However there are several applications in multi agent coordination that are of a distributed nature In this type of application the knowledge about the problem that is variables and constraints may be logically or geographically distributed among physical distributed agents This distribution is mainly due to privacy and or security requirements Therefore a distributed model allowing a decentralized solving process is more adequate to model and solve such kinds of problem The distributed constraint satisfaction problem has such properties
