DEMON **Advances in Petri Nets 1991** Helmut Plünnecke, Wolfgang Reisig, 1991 The main idea behind the series of volumes *Advances in Petri Nets* is to present to the general computer science community recent results which are the most representative and significant for the development of the area. The papers for the volumes are drawn mainly from the annual International Conferences on Applications and Theory of Petri Nets. Selected papers from the latest conference are independently refereed and revised and extended as necessary. Some further papers submitted directly to the editor are included. *Advances in Petri Nets 1991* covers the 11th International Conference on Applications and Theory of Petri Nets held in Paris, France, in June 1991. The volume contains the Bibliography of Petri Nets 1990 prepared by H. Plünnecke and W. Reisig with over 4000 entries. PUBLISHER'S WEBSITE **Lectures on Concurrency and Petri Nets**, 2004 **Advances in Petri Nets 1987** Grzegorz Rozenberg, 1987-06-22 The aim of these series of volumes *Advances in Petri Nets* is to present to the general computer science community the most significant recent results with regard to the development in the area. The main source of the papers are the annual European Workshops on Applications and Theory of Petri Nets: the highest ranked papers from the past workshops are considered for the series, i.e. they are again reviewed and accordingly revised or extended. In addition to the workshop papers, the *Advances* also present invited papers. The present volume *Advances in Petri Nets 1987* covers the 7th European Workshop on Applications and Theory of Petri Nets held in Oxford, Great Britain, in June 1986. It also contains a survey on complexity of problems related to Petri nets written by R. R. Howell and L. E. Rosier. A special feature of this volume is a bibliography on Petri nets containing more than 2000 entries. Unifying Petri Nets Hartmut Ehrig, Gabriel Juhas, Julia Padberg, Grzegorz Rozenberg, 2003-06-30 Since their introduction nearly 40 years ago, research on Petri nets has diverged in many different directions. Various classes of Petri nets motivated either by theory or applications with its own specific features and methods of analysis have been proposed and studied in depth. These successful developments have led to a very heterogeneous landscape of diverse models and this in turn has stimulated research on concepts and approaches that contribute to unifying and structuring the diverse landscape. This state-of-the-art survey presents the most relevant approaches to unifying Petri nets in a systematic and coherent way. The 14 chapters written by leading researchers are organized in topical sections on application-oriented approaches, unifying frameworks, and theoretical approaches. High-level Petri Nets Kurt Jensen, Grzegorz Rozenberg, 2012-12-06 High-level Petri nets are now widely used in both theoretical analysis and practical modelling of concurrent systems. The main reason for the success of this class of net models is that they make it possible to obtain much more succinct and manageable descriptions than can be obtained by means of low-level Petri nets, while on the other hand they still offer a wide range of analysis methods and tools. The step from low-level nets to high-level nets can be compared to the step from assembly languages to modern programming languages with an elaborated type concept. In low-level nets there is only one kind of token and this means that the state of a place is described by an integer and in many cases even by a boolean value. In high-level nets each token can carry complex

information which e.g. may describe the entire state of a process or a data base. Today most practical applications of Petri nets use one of the different kinds of high level nets. A considerable body of knowledge exists about high level Petri nets; this includes theoretical foundations, analysis methods and many applications. Unfortunately the papers on high level Petri nets have been scattered throughout various journals and collections. As a result much of this knowledge is not readily available to people who may be interested in using high level nets.

Reisig, Grzegorz Rozenberg, 1998 *Verification of Systems and Circuits Using LOTOS, Petri Nets, and CCS* Michael Yoeli, Rakefet Kol, 2008-03-28 *A Step by Step Guide to Verification of Digital Systems*. This practical book provides a step by step interactive introduction to formal verification of systems and circuits. The book offers theoretical background and introduces the application of three powerful verification toolsets: LOTOS based CADP, Petri nets based PETRIFY and CCS based CWB. The book covers verification of modular asynchronous circuits, alternating bit protocols, arbiters, pipeline controllers, up/down counters and phase converters as well as many other verification examples. Using the given detailed examples, exercises and easy to follow tutorials, complete with the downloadable toolsets available via referenced Web sites, this book serves as an ideal text in advanced undergraduate and graduate courses in computer science and electrical engineering. It is also valuable as a desktop reference for practicing verification engineers who are interested in verifying that designed digital systems meet specifications and requirements.

Lectures on Petri Nets I: Basic Models Wolfgang Reisig, Grzegorz Rozenberg, 1998-11-04. The two volume set originates from the Advanced Course on Petri Nets held in Dagstuhl, Germany, in September 1996. Beyond the lectures given there, additional chapters have been commissioned to give a well balanced presentation of the state of the art in the area. Together with its companion volume *Lectures on Petri Nets II: Applications*, this book is the actual reference for the area and addresses professionals, students, lecturers and researchers who are interested in systems design and would like to learn to use Petri nets familiar with subareas of the theory or its applications and wish to view the whole area. Interested in learning about recent results presented within a unified framework, planning to apply Petri nets in practical situations, interested in the relationship of Petri nets to other models of concurrent systems.

Conceptual Modeling -- ER 2003 Il-Yeol Song, Stephen W. Liddle, Tok Wang Ling, Peter Scheuermann, 2003-10-24. The 22nd International Conference on Conceptual Modeling (ER 2003) returned to Chicago after an absence of 18 years. Chicago, a city well known for its trendsetting and daring architecture, has met the new century with a renewed commitment to open public spaces and human interaction. Thus it provided a fitting venue for ER 2003, the scope of which was expanded to encompass all aspects of

conceptual modeling in order to deal with constantly changing information technology and business practices and to accommodate a new openness in connecting systems to each other and to human users The ER 2003 Program Co chairs Il Yeol Song Stephen Liddle and Tok Wang Ling along with an outstanding Program Committee assembled one of the nest technical programs of this conference series In keeping with the tradition of previous ER conferences the program for ER 2003 also included four preconference workshops two preconference tutorials two conference tutorials two panels and a demos and poster session The Program Co chairs as well as Manfred Jeusfeld and Oscar Pastor Workshop Co chairs Ee Peng Lim and Tobey Teorey Tutorial Co chairs Avigdor Gal and Elisa Bertino Panel Co chairs and Heinrich Mayr Demos and Poster Chair deserve our appreciation for an excellent job It was a pleasure working with all of them
