Fundamentals of Electro-Optic Systems Design Sherman Karp, Larry B. Stotts, 2013 Presents practical electro optical applications in the context of the fundamental principles of communication theory thermodynamics information theory and propagation theory Combining systems issues with fundamentals of communications this is an essential reference for all practising engineers and academic researchers in optical engineering *Free Space Optical Systems Engineering* Larry B. Stotts, 2017-03-29 Gets you guickly up to speed with the theoretical and practical aspects of free space optical systems engineering design and analysis One of today s fastest growing system design and analysis disciplines is free space optical systems engineering for communications and remote sensing applications It is concerned with creating a light signal with certain characteristics how this signal is affected and changed by the medium it traverses how these effects can be mitigated both pre and post detection and if after detection it can be differentiated from noise under a certain standard e g receiver operating characteristic Free space optical systems engineering is a complex process to design against and analyze While there are several good introductory texts devoted to key aspects of optics such as lens design lasers detectors fiber and free space optical communications and remote sensing until now there were none offering comprehensive coverage of the basics needed for optical systems engineering If you re an upper division undergraduate or first year graduate student looking to acquire a practical understanding of electro optical engineering basics this book is intended for you Topics and tools are covered that will prepare you for graduate research and engineering in either an academic or commercial environment If you are an engineer or scientist considering making the move into the opportunity rich field of optics this all in one guide brings you up to speed with everything you need to know to hit the ground running leveraging your experience and expertise acquired previously in alternate fields Following an overview of the mathematical fundamentals this book provides a concise yet thorough coverage of among other crucial topics Maxwell Equations Geometrical Optics Fourier Optics Partial Coherence theory Linear algebra Basic probability theory Statistics Detection and Estimation theory Replacement Model detection theory LADAR LIDAR detection theory optical communications theory Critical aspects of atmospheric propagation in real environments including commonly used models for characterizing beam and spherical and plane wave propagation through free space turbulent and particulate channels Lasers blackbodies graybodies sources and photodetectors e g PIN ADP PMT and their inherent internal noise sources The book provides clear detailed discussions of the basics for free space optical systems design and analysis along with a wealth of worked examples and practice problems found throughout the book and on a companion website Their intent is to help you test and hone your skill set and assess your comprehension of this important area Free Space Optical Systems Engineering is an indispensable introduction for students and professionals alike

Integrated Modeling of Telescopes Torben Andersen, Anita Enmark, 2011-06-23 Ground or space based telescopes are becoming increasingly more complex and construction budgets are typically in the billion dollar range Facing costs of this

magnitude availability of engineering tools for prediction of performance and design optimization is imperative Establishment of simulation models combining different technical disciplines such as Structural Dynamics Control Engineering Optics and Thermal Engineering is indispensable Such models are normally called Integrated Models because they involve many different disciplines The models will play an increasingly larger role for design of future interdisciplinary optical systems in space or on ground The book concentrates on integrated modeling of optical and radio telescopes but the techniques presented will be applicable to a large variety of systems Hence the book will be of interest to optical and radio telescope designers designers of spacecrafts that include optical systems and to designers of various complex defense systems The book may also find use as a textbook for undergraduate and graduate courses within the field Adaptive Optics is an exciting and relatively new field originally dedicated to correction for blurring when imaging through the atmosphere Although this objective is still of high importance the concept of Adaptive Optics has recently evolved further Today the objective is not only to correct for atmospheric turbulence effects but also for a range of static and dynamical telescope aberrations The notion of adaptive optics has expanded to the field of Wavefront Control correcting for a variety of system aberrations Wavefront control systems maintain form and position of optical elements with high precision under static and dynamical load In many ways such systems replace the steel structures of traditional optical systems thereby providing much lighter systems with a performance not possible before Integrated Modeling is the foremost tool for studies of Wavefront Control for telescopes and complex optics and is therefore now of high importance Springer has recently published two books on telescopes Reflecting Telescope Optics by R Wilson and The Design and Construction of Large Optical Telescopes by P Bely Noting that a new and expensive generation of Extremely Large Telescopes with apertures in the 30 100 m range is on the way the present book on integrated modeling is a good match to the existing books and an appropriate specialization and continuation of some subjects dealt with in those books Path To Transformational Space Exploration, The (In 2 Volumes) Philip Lubin, 2022-03-14 In this book professor Lubin lays out the fundamental physics and mathematics required to radically alter our capabilities in propulsion to enable extremely high speed space flight both in our solar system and beyond The case is made that the only currently viable solution to enable this transformation including relativistic flight for the first interstellar robotic missions is using large scale directed energy Traditional methods of propulsion are not capable of achieving the speed required for rapid missions in our solar system including fast crewed missions to Mars as well as the many robotic missions desired both in our solar system and to the nearest stars Humanity has now reached a technological tipping point with the ability to project power over vast distances with transformational implications in a wide variety of areas from propulsion to beaming power throughout our solar system to planetary defence In a series of over 50 technical papers the fundamentals of this transformation are outlined and synthesized in this book allowing a detailed understanding of the many challenges ahead and a roadmap to the future direction for human exploration far beyond our solar system While

exploration Optical Engineering ,2006 Publishes papers reporting on research and development in optical science and engineering and the practical applications of known optical science engineering and technology Field Guide to Adaptive Optics Robert K. Tyson, Benjamin West Frazier, 2012 Provides a summary of the methods for determining the requirements of an adaptive optics system the performance of the system and the requirements for the components of the system This second edition has a greatly expanded presentation of adaptive optics control system design and operation Discussions of control models are accompanied by various recommendations for implementing the algorithms in hardware

**Field Guide to Geometrical Optics** John E. Greivenkamp,2004 This Field Guide derives from the treatment of geometrical optics that has evolved from both the undergraduate and graduate programs at the Optical Sciences Center at the University of Arizona The development is both rigorous and complete and it features a consistent notation and sign convention This volume covers Gaussian imagery paraxial optics first order optical system design system examples illumination chromatic effects and an introduction to aberrations The appendices provide supplemental material on radiometry and photometry the human eye and several other topics **SPIE Field Guides** Society of Photo-optical Instrumentation Engineers, 2003 **SPIE field guides: FG** SPIE, The International Society for Optical Engineering, 2004

Field Guide to Atmospheric Optics Larry C. Andrews, 2019 The material in this Field Guide includes a review of classical Kolmogorov turbulence theory Gaussian beam waves in free space and atmospheric effects on a propagating optical wave These atmospheric effects have great importance in a variety of applications like imaging free space optical communications laser radar and remote sensing This Field Guide presents tractable mathematical models from which the practitioner can readily determine beam spreading beam wander spatial coherence radius Fried s parameter angle of arrival fluctuations scintillation aperture averaging effects fade probabilities bit error rates and enhanced backscatter effects among others There have been a number of new model developments in atmospheric propagation of a laser beam since the first edition of this Field Guide to Atmospheric Optics many of which are included in this second edition The subject of Atmospheric Optics is more extensive than that presented here For example most treatments of the subject matter concentrate heavily on the scattering and absorption by the molecular gases particulates and aerosols in the atmosphere This usually also includes a detailed analysis of the wind temperature and pressure particularly as a function of altitude Another area of concentration in many treatments of the subject takes into account meteorological optics which is a fascinating area all of its own The subject of optical phenomena is often presented in great detail covering rainbows halos mirages red sunsets and so on Selected SPIE Proceedings SPIE, Spie--the International Society for Optical Engineering, 2002-07 Includes proceedings volumes 1542 2201 2534 3353 and 4007 Adaptive Optics Engineering Handbook Robert Tyson, 1999-11-10 This handbook supplies analytical tools for the design and development of adaptive optics systems to enhance their ability to adjust for atmospheric
