The New Superconducting Electronics H. Weinstock,Richard W. Ralston,2012-12-06 This volume is based on the proceedings of the NATO sponsored Advanced Studies Institute ASn on The New Superconducting Electronics held 9 20 August 1992 in Waterville Valley New Hampshire USA The contents herein are intended to provide an update to an earlier volume on the same subject based on a NATO ASI held in 1988 Four years seems a relatively short time interval and our title itself featuring The New Superconducting Electronics may appear somewhat pretentious Nevertheless we feel strongly that the ASI fostered a timely reexamination of the technical progress and application potential of this rapid paced field There are indeed many new avenues for technological innovation which were not envisioned or considered possible four years ago The greatest advances by far have occurred with regard to oxide superconductors the so called high transition temperature superconductors known in short as HTS These advances are mainly in the ability to fabricate both 1 high quality relatively large area films for microwave filters and 2 multilayer device structures principally superconducting normal superconducting SNS Josephson junctions for superconducting quantum interference device SQUID magnetometers Additionally we have seen

the invention and development of the flux flow transistor a planar three terminal device During the earlier ASI only the very first HTS films with adequate critical current density had just been fabricated and these were of limited area and had high resistance for microwave current

Integrated Chemical Microsensor Systems in CMOS Technology Andreas Hierlemann, 2005-08-29 Beginning with a comprehensive survey of existing semiconductor based chemical microsensors and microsystems this book proceeds to describe in detail CMOS technology based chemical microsensor systems The benefits of using CMOS technology for developing chemical microsensor systems and in particular monolithically integrated sensor systems comprising transducers and associated circuitry are laid out Several successful realizations of such microsensor systems are presented First the fundamentals of the chemical sensing process itself will be elucidated followed by a short description of microfabrication techniques and the CMOS substrate Thereafter a comprehensive overview of semiconductor based and CMOS based transducer structures and their applications is given It is shown that CMOS technology can be successfully used as platform technology to integrate microtransducers with the necessary driving and signal conditioning circuitry and in a next step to develop monolithic multisensor arrays and fully developed microsystems with on chip sensor control and standard interfaces The book concludes with a brief outlook to future developments such as interfacing cells with CMOS microelectronics

Gas Sensors G. Sberveglieri, 2012-12-06 There were two reasons that induced me to plan and to organize this book the first was the lack of a text entirely devoted to the subject of gas sensors notwithstanding some books devoted to the various kind of chemical sensors have recently been published The second reason was the need of introducing the basic topics of gas detection mechanisms to a growing number of researchers active in research and development laboratories of industries and universities The field of chemical sensors is indeed in fast and consistent growth as it is proved by the increased number of participants to the congresses that were recently held on this subject namely the Third Meeting on Chemical Sensors September 24-26 1990 Cleveland Transducers 91 June 24-27 1991 S Francisco and EUROSENSORS V September 30-October 3 1991 Rome Therefore this book is mainly intended as a reference text for researchers with a MS degree in physics chemistry and electrical engineering it reports the last progresses in the R D and in the technology of gas sensors I choose to deal specifically with the topic of gas sensors because these devices show a very large number of applications in the domestic and industrial field and they are characterized by a great effort of research and development
