Communicating Popular Science S. Perrault, 2013-07-12 Technoscientific developments often have far reaching consequences both negative and positive for the public Yet because science has the authority to decide which judgments about scientific issues are sound public concerns are often dismissed because they are not part of the technoscientific paradigm they question This book addresses the role of science popularization in that paradox it explains how science writing works and argues that it can do better at promoting public discussions about science related issues To support these arguments it situates science popularization in its historical and cultural context provides a conceptual framework for analyzing popular science texts and examines the rhetorical effects of common strategies used in popular science writing Twenty six years after Dorothy Nelkin's groundbreaking book *Selling Science How the Press Covers Science and Technology* popular science writing is still not meeting its potential as a public interest genre *Communicating Popular Science* explores how it can move closer to doing so

Journalism, Science and Society Martin W. Bauer, Massimiano Bucchi, 2008-07-25 Analyzing the role of journalists in science communication this book presents a perspective on how this is going to evolve in the twenty first century The book takes three distinct perspectives on this interesting subject Firstly science journalists reflect on their operating rules science news values and news making routines Secondly a brief history of science journalism puts things into context characterising the changing output of science writing in newspapers over time Finally the book invites several international journalists or communication scholars to comment on these observations thereby opening the global perspective This unique project will interest a range of readers including science communication students media studies scholars professionals working in science communication and journalists

Making Data Talk David E Nelson,Bradford W Hesse,Robert T Croyle,2009-05-20 The demand for health information continues to increase but the ability of health professionals to provide it clearly remains variable The aim of this book is 1 to summarize and synthesize research on the selection and presentation of data pertinent to public health and 2 to provide practical suggestions based on this research summary and synthesis on how scientists and other public health practitioners can better communicate data to

the public policy makers and the press in typical real world situations Because communication is complex and no one approach works for all audiences the authors emphasize how to communicate data better and in some instances contrast this with how to communicate data worse rather than attempting a cookbook approach The book contains a wealth of case studies and other examples to illustrate major points and actual situations whenever possible Key principles and recommendations are summarized at the end of each chapter This book will stimulate interest among public health practitioners scholars and students to more seriously consider ways they can understand and improve communication about data and other types of scientific information with the public policy makers and the press Improved data communication will increase the chances that evidence based scientific findings can play a greater role in improving the public s health

Introducing Science Communication Mark L. Brake,Emma Weitkamp,2017-09-16 From discussions of climate change to the latest arguments around stem cell research science has never been more topical and relevant to our everyday lives Yet its intricacies are often hard for the general public to grasp The key challenge for scientists and science communicators is to explain these scientific ideas and engage different groups with current debates This long overdue book explores how to successfully communicate complex and sometimes controversial scientific issues Investigating the practices behind a range of traditional media and more interactive

approaches the book looks at how professional communicators interact with and present science communication in all its guises. It explores the historical background of science communication and examines how science continues to be referred to and used throughout popular culture, the media and museums. Practical chapters explain key methods and give tips on overcoming communication issues and problems whilst introducing the reader to a theoretical understanding of science communication. Written and edited by pioneering and experienced professionals in the field, this is an essential text for students and practitioners learning how to effectively communicate science.

Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14. The explosion of scientific information is exacerbating the information gap between richer, poorer, educated, less educated publics. The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind. This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences. Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments. Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences. Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research. Science communication often in new forms must expand to meet all these needs. Providing a comprehensive introduction to students, professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each. For this reason, science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses. Even so, those entering the field rarely will have a comprehensive background in both science and communication studies. This circumstance underscores the importance of compiling useful reference materials. The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources. Science communicators need to understand more than how to interpret scientific facts and conclusions; they need to understand basic elements of the politics, sociology and philosophy of science as well as relevant media and communication theory, principles of risk communication, new trends and how to evaluate the effectiveness of science communication programmes. To mention just a few of the major challenges. This work will help to develop and enhance such understanding as it addresses these challenges and more. Topics covered include advocacy, policy and research organizations, environmental and health communication, philosophy of science, media theory and science communication, informal science education, science

journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics *Handbook on Communicating and Disseminating Behavioral Science* Melissa K. Welch-Ross, Lauren G. Fasig, 2007-10-03 The Handbook on Communicating and Disseminating Behavioral Science assembles for the first time in a single volume research scholarship and practices from across relevant disciplines and professions to give a coherent picture for both students in the classroom and scholars. Designed as both a text and a handbook it provides insights into the main actors contemporary themes and approaches key challenges and the broader conditions that influence whether and how the work occurs. Contributors include behavioral scientists journalism and communication scholars mass media reporters editors and producers from print television and radio representatives of think tanks and advocacy organizations and professional communicators from a university a scientific society and a national social issue campaign. All bring an accomplished record of sharing behavioral science to inform policy mass media service professions and the public. Though scholarly the book brings together leading authorities who are both doers and thinkers to offer insights into how the work is done and to illuminate the underlying conceptual and empirical issues. The book also advances the dissemination and communication of behavioral research as an area of scientific inquiry in its own right one that holds vast opportunities for the field of behavioral science. Contributors offer recommendations for programs of research that should be at the top of the research agenda. As a book of core readings written to be accessible to both professionals and students the book is poised to be a staple of any serious attempt to introduce behavioral scientists to key issues in communicating and disseminating behavioral science and to advance their capacity to understand and conduct the work. It is also an unrivaled resource for student and professional science communicators seeking to learn more about the challenges of communicating behavioral research. **Environment Reporters in the 21st Century** JoAnn Myer

Valenti, 2017-07-28 *Environment Reporters in the 21st Century* is the story of a relatively new journalistic beat environmental reporting. This book explores the development of the environmental beat as a specialty during the last thirty years. It also discusses broader trends within American journalism resulting from technological changes that challenge traditional mediums especially newspapers and magazines. The book is divided into three parts. The first reviews the literature and explains the methodology. The second describes the results of the authors research. The third provides in depth accounts of environment reporters at work. A final chapter puts the research in historical perspective viewing it in terms of the economic decline of the newspaper business and of local television news. Journalists mediate a constant struggle among thousands of environmental activists corporate public relations people government officials and scientists to shape environmental reporting. This volume tells the story of environmental reporting imaginatively and innovatively. **Communicating Science to the Public** Leo Tan Wee Hin, R. Subramaniam, 2014-07-24 This book explores effective approaches for communicating science to the public in developing countries. Offering multiple perspectives on this important topic it features

17 chapters that represent the efforts of 23 authors from eight countries Australia Bangladesh India Ireland New Zealand USA Singapore and South Africa Inside readers will find a diversity of approaches to communicate science to the public The book also highlights some of the challenges that science communicators science policy makers science teachers university academics in the sciences and even entrepreneurs may face in their attempts to boost science literacy levels in their countries In addition it shares several best practices from the developed world that may help readers create communication initiatives that can lead to increased engagement with science in communities in the Asia Pacific region and beyond Given the pervasive influence of science and technology in today s society their impact will only increase in the years to come as the world becomes more globalized and the economies of countries become more inter linked This book will be a useful source of reference for developing countries looking to tap into the potential of science for nation building and effectively engage their communities to better understand science and technology Supported by the Pacific Science Association Hawaii
