Singh, 2004 A very useful reader providing an excellent and authentic perspective on higher education and UGC in India Educational Review The University Grants Commission UGC was established by an Act of Parliament at the end of 1953 Its charter was to regulate and control all tertiary level institutions in the country and to determine standards of higher and professional education From the time the UGC was set up there has been an exponential growth in the number of higher academic institutions which today employ more than 400 000 teachers with a student body in excess of 9 million Recent

years have also witnessed the mushrooming of private institutions which are largely beyond the remit of the UGC. The result is a chaotic situation where institutions are free to do what they want with little concern for students. This is the first book length study of the functioning of the UGC and indirectly of fifty years of higher education in India. Written by an eminent educationist, it critically examines the way in which the UGC has performed since its inception and determines the reasons for its failure. Dr Amrik Singh maintains that the powers given to the UGC are severely limited and that combined with poor internal management this has made it a largely ineffective body. The author offers a number of practical solutions which if implemented could go a long way towards ameliorating the problems facing the UGC today. These include Amending the UGC Act to grant it more statutory and disciplinary powers. Adequate financial and administrative support from the Ministry of Human Resource Development. Expanding the UGC's role of accreditation. Strengthening the educational structure at the state level. Designing new modes of testing in universities and colleges. Encouraging teachers to take a greater leadership role. Developing mechanisms for student assessment of teachers. This book is neither a scholarly work nor an historical account of the UGC. Rather it is a critical assessment of an institution whose role is central to the field of higher education in India. Timely and topical it will be of immense interest to educationists and policy makers in the field of higher education as also to the general reader.

The Oxford Illustrated History of Science Iwan Rhys Morus, 2017-06-16 The Oxford Illustrated History of Science is the first ever fully illustrated global history of science from Aristotle to the atom bomb and beyond. The first part of the book tells the story of science in both East and West from antiquity to the Enlightenment from the ancient Mediterranean world to ancient China from the exchanges between Islamic and Christian scholars in the Middle Ages to the Chinese invention of gunpowder paper and the printing press from the Scientific Revolution of sixteenth and seventeenth century Europe to the intellectual ferment of the eighteenth century. The chapters that follow focus on the increasingly specialized story of science since end of the eighteenth century covering experimental science in the laboratory from Michael Faraday to CERN the exploration of nature from intrepid Victorian explorers to twentieth century primatologists the mapping of the universe from the discovery of Uranus to Big Bang theory the impact of evolutionary ideas from Lamarck Darwin and Wallace to DNA and the story of theoretical physics from James Clark Maxwell to Quantum Theory and beyond. A concluding chapter reflects on how scientists have communicated their work to a wider public from the Great Exhibition of 1851 to the internet in the early twenty first century.
