S. Bhat,2009-09 Ecological Time Series Thomas M. Powell,John H. Steele,2012-12-06 This book results from a summer school held at Cornell University in 1992 The participants were graduate students and postdoctoral researchers selected from a broad range of interests and backgrounds in ecological studies The summer school was the second in a continuing series whose underlying aim and the aim of this volume is to bring together the different methods and concepts underpinning terrestrial freshwater and marine ecology The first volume in the series focused on patch dynamics in these three ecological sectors Here we have endeavored to complement that volume by extending its comparative approach to the consideration of ecological time series The types of data and the methods of collection are necessarily very different in these contrasting environments yet the underlying concept and the technical problems of analysis have much in common It proved to be of great interest and value to the summer school participants to see the differences and then work through to an appreciation of the generalizable concepts We believe that such an approach must have value as well for a much larger audience and we have structured this volume to provide a comparable reading experience The Earth as Transformed by Human Action B. L. Turner,William C. Clark,Robert W. Kates,John F. Richards,Jessica T. Mathews,William B. Meyer,1993-01-29 The Earth as Transformed by Human Action is the culmination of a mammoth undertaking involving the examination of the toll our continual strides forward technical and social take on our world The purpose of such a study is to document the changes in the biosphere that have taken place over the last 300 years to contrast global patterns of change to those appearing on a regional level and to explain the major human forces that have driven these changes The first section deals strictly with the major human forces of the past 300 years and the second is a detailed account of the transformations of the global environment wrought by human action The final section examines a range of perspectives and theories that purport to explain human actions with regard to the biosphere **The SAGE Handbook of Geomorphology** Kenneth J
