Fluid Mechanics of Environmental Interfaces Sajjan G. Shiva, 2012-11-21 Environmental Fluid Mechanics EFM studies the motion of air and water at several different scales the fate and transport of species carried along by these fluids and the interactions among those flows and geological biological and engineered systems EFM emerged some decades ago as a response to the

need for tools to study problems of flow and *Environmental Geoscience: Interaction Between Natural Systems and Man* Arthur Newell Strahler, Alan H. Strahler, 1973

Surveillance on Screen Sébastien Lefait, 2013 Drawing on the rapidly developing field of surveillance studies this book examines television shows and films including *Lost* *Survivor* *Minority Report* *Enemy of the State* and *Nineteen Eighty Four* that shape our experience of surveillance both as watchers and as those being watched

Climate, Environment, and Society in the Pacific during the Last Millennium Patrick D. Nunn, 2007-10-10 The nature of global change in the Pacific Basin is poorly known compared to other parts of the world *Climate Environment and Society in the Pacific during the Last Millennium* describes the climate changes that occurred in the Pacific during the last millennium and discusses how these changes controlled the broad evolution of human societies typically filtered by the effects of changing sea level and storminess on food availability and interaction Covering the entire period since AD 750 in the Pacific this book describes the influences of climate change on environments and societies during the Medieval Warm Period and the Little Ice Age focusing on the 100 year transition between these a period of rapid change known as the AD 1300 Event Discusses the societal effects of climate and sea level change as well as the evidence for externally driven societal change Synthesizes how climate change has driven environmental change and societal change in the Pacific Basin Contains a comprehensive and up to date survey of the evidence for climate environmental and societal change supported by a full list of references

**The Impact of Mining on the Landscape** Renata Dulias, 2016-04-21 This book investigates the Upper Silesian Coal Basin USCB one of the oldest and largest mining areas not only in Poland but also in Europe Using uniform research methods for the whole study area it also provides a summary of the landscape transformations Intensive extraction of hard coal zinc and lead ores stowing sands and rock resources have caused such extensive transformations of landscape that it can be considered a model anthropogenic relief The book has three main focuses 1 Identifying anthropogenic forms of relief related to mining activity and presenting them from a spatial genetic and age perspective 2 Determining the changes in the morphometric characteristics of relief and the conditions for matter circulation in open systems drainage basins and closed systems land locked basins caused by the extraction of mineral resources and 3 Estimating the extent of anthropogenic denudation using two different methods based on raw material output and morphometric analysis In Poland no other mining area has undergone such intensive mining activity as the Upper Silesian Coal Basin during the last half century Its share in the total extraction of mineral resources was as high as 32% The total extraction of hard coal in the Upper Silesian Coal Basin from the mid 18th century until 2009 was the sixth largest in the world and the permanent regional effects of mining anthropopressure on the relief are among the most severe in the world The anthropogenic denudation rate in the Upper Silesian Coal Basin as well as the Ruhr Coal Basin Ruhr District and the Ostrava Karvina Coal Basin ranges from several dozen up to several hundred times higher than the rate of natural denudation irrespective of the calculation method used It would take the natural denudation processes tens of thousands of

years to remove the same amount of material from the substratum as that removed through human mining activity

**The Current Role of Geological Mapping in Geosciences** Stanislaw R. Ostaficzuk, 2005-10-04 The book contains private views of experts from various countries on the role of geological mapping in sustainable development New technologies and concepts are presented which are either awaiting for recognition by Geological Surveys or are gradually applied in some survey The target of the book is well worded in the Summary and recommendations elaborated by the Ad Hoc Committee at the Advanced Research Workshop on Innovative Geological Cartography held under NATO sponsorship in Poland in November 2003 After the Summaries were issued by the end of 2003 the authors who presented their views at the Workshop gave a revised version of their papers with more new ideas and material Generally the book is addressed to cartographers in Geological Surveys geologists and geographers co operating with landuse planners ecologists and decision makers who may learn about the state of the art and the enormous information potential of the modern information technologies in Geosciences The book however gives no methodological recipes but as it was the authors intention may and shall be used as a guide book in modernizing Information Technologies at the local regional and national levels in Geosciences
