Geomechanics G.N. Pande, S. Pietruszczak, 2004-08-15 Reflecting the current research and advances made in the application of numerical methods in geotechnical engineering this volume details proceedings of the Ninth International Symposium on Numerical Models in Geomechanics NUMOG IX held in Ottawa Canada 25-27 August 2004 Highlighting a number of new developments in the area papers concentrate upon the following four main areas constitutive relations for geomaterials numerical algorithms formulation and performance modelling of transient coupled and dynamic problems application of numerical techniques to practical problems Representing the most advanced modern findings in the field Numerical Models in Geomechanics is a comprehensive and impeccably researched text ideal for students and researchers as well as practising engineers

Fracture Scaling Zdenek P. Bazant, Y. Rajapakse, 2012-12-06 This volume is a collection of the papers given at the workshop on Fracture Scaling held at the University of Maryland USA 10-12 June 1999 under the sponsorship of the Office of Naval Research Arlington VA USA These papers can be grouped under five major themes Micromechanical analysis Size effects in fiber composites Scaling and heterogeneity Computational aspects and nonlocal or gradient models Size effects in concrete ice and soils This workshop is the result of a significant research effort supported by the Office of Naval Research into the problems of scaling of fracture in fiber composites and generally into the problems of scaling in solid mechanics These problems which are of interest for many materials especially all quasibrittle materials share similar characteristics Thus progress in the understanding of scaling problems for one material may help progress for another material This makes it clear that a dialogue between researchers in various fields of mechanics is highly desirable and should be promoted In view of this this volume should be of interest to researchers and advanced graduate students in materials science solid mechanics and civil engineering

Advances in Unsaturated Soils

Bernardo Caicedo, 2013-02-01 New theories and testing techniques related with Unsaturated Soil Mechanics have proven to be valuable tools to study a broad spectrum of geo materials which includes rocks rock fills frozen soils and domiciliary solid wastes These new theories and testing techniques have permitted the analysis of several traditional problems from a new perspective e.g. swelling or collapsible soils and compacted soils or pavements materials and they have also shown their efficiency to study new energy related problems like CO₂ sequestration and nuclear waste disposal Advances in Unsaturated

Soils is a collection of papers from the 1st Pan American Conference on Unsaturated Soils organized in Cartagena de Indias Colombia in February 2013 The volume includes 76 research papers coming from all over the world as well as 7 keynote papers by well known international researchers The contributions present a variety of topics including Advances in testing techniques Unsaturated soil behavior Constitutive modeling and microstructure Numerical modeling Geotechnical problems Advances in Unsaturated Soils is expected to become a useful reference to academics and professionals involved in Unsaturated Soil Mechanics

Geotechnical Aspects of Underground Construction in Soft Ground Giulia Viggiani, 2012-09-05 Geotechnical Aspects of Underground Construction in Soft Ground comprises a collection of 118 papers four reports on symposium themes and four invited lectures presented at the seventh International Symposium on Geotechnical Aspects of Underground Construction in Soft Ground held in Rome Italy 16-18 May 2011 The symposium was organized by the Pressuremeters in Geotechnical Design B.G. Clarke, 1994-10-20 The use of pressuremeters in predicting in situ soil properties is increasing as the technique becomes established as a reliable method of site investigation This book provides a thorough review of the topic and its use in site investigation

The Pressuremeter and Its Marine Applications J.-L. Briaud, Jean M. E. Audibert, 1986 Fracture Mechanics Applied to Geotechnical Engineering Luis E. Vallejo, Robert Y. Liang, 1994 This book reviews fracture mechanics theory and its application in preventing failure in geotechnical engineering works including embankment dams pavements clay liners and soil covers in waste containment systems Contributors examine stress and strain fields in the vicinity of cracks and predict the depths to which cracks will extend beneath the surface of a drying clay They also determine the underlying physical processes that govern inelastic behavior in brittle geologic materials Case studies that use finite elements techniques linear elastic fracture mechanics and the interpretation of acoustic emissions among other methods of investigation are presented

Characterisation and Engineering Properties of Natural Soils T. S. Tan, 2003 This second volume of a specialty 2 volume work contains 34 papers pertaining to the natural behaviour of diverse geomaterials found in different parts of the world Each paper is organized along the outline location and distribution engineering geology composition state and index properties structure engineering properties quality reliability of data with reference to methods of sampling and testing and relation to engineering problems This extensive body of collated knowledge is integrated by three overview papers covering engineering geology mechanical behaviour and engineering implications Topics Overview papers Marine clays Estuarine Clays Lacustrine clays Stiff clays Sands and other cohesionless soils Residual and other tropical Soils Weak rock

Comptes Rendus Du 15ème Congrès Européen de Mécanique Des Sols & de Géotechnique : la Géotechnique Des Sols Indurés, Roches Tendres Andreas Anagnostopoulos, Michael Pachakis, Christos Tsatsanifos, 2013 This publication contains the papers presented at the 15th European Conference on Soil Mechanics and Geotechnical Engineering ECSMGE held in Athens Greece Considerable progress has been made in recent decades in understanding the engineering behavior of those hard

soils and weak rocks that clearly fall into either the field of soil or of rock mechanics and there have been important developments in design and construction methods to cope with them Progress would be even more desirable however for those materials which fall into the grey area between soils and rocks They present particular challenges due to their diversity the difficulties and problems arising in their identification and classification their sampling and testing and in the establishment of suitable models to adequately describe their behavior The publication aims to provide an updated overview of the existing worldwide knowledge of the geological features engineering properties and behavior of such hard soils and weak rocks with particular reference to the design and construction methods and problems associated with these materials Part 4 was published post conference and includes Conference Reports *Pre-failure Deformation Behaviour of Geomaterials* R. J. Jardine, 1998 In the past fifteen years experimental and theoretical characterisation of the pre failure deformation properties of geomaterials has developed enormously In recognition of these important research developments a Geotechnique Symposium in Print SIP was held at the Institution of Civil Engineers in 1997 This volume brings together the nineteen Geotechnique SIP papers which summarise the recent developments in measuring and understanding the pre failure stress strain time properties of natural soils and apply this information to practical engineering problems
