Perspektiven linguistischer Sprachkritik Jörg Bücker, 2015-08-01 This volume provides a collection of new perspectives on linguistic aspects of language criticism It aims to offer a systematic account of the linguistic dimensions of all complex actions and discourses that can be the subject of critical language theory which tries to link language and society In contrast to conventional language criticism the linguistic branch builds its conditions on the basis of a systemic analysis of its objects of inquiry Its main goal is the formation of a linguistic awareness regarding the criterion of appropriateness with view of situational contextual and cultural factors The contributions in this volume reflect the multitude of different factors of and interrelations between linguistic aspects of language criticism They show the extent to which critical linguistic practices impact societal issues and discourses but also how they function in everyday and

institutional contexts such as new media and face to face interactions They also discuss the didactic challenges and opportunities that come with the teaching of language criticism in schools and universities This book is primarily aimed at linguists as well as lecturers and teachers but also at general readers interested in all aspects of language criticism *The Structure of German* Anthony Fox,1990 This book is a description of the major features of German according to the principles of modern linguistics It considers aspects of German phonology morphology syntax and semantics as well as varieties and discourse from a theoretical perspective though theory is discussed only insofar as it can throw light on the structure of the language The aim is not to present a reference grammar nor to provide definitive answers to the questions raised but rather to foster a linguistically informed approach to the description of the language No work of the kind has been available in English up to now and the book is intended to fill this gap

Swiss German Intonation Patterns Adrian Leemann,2012 Switzerland is renowned for having a diverse linguistic and dialectal landscape in a comparatively small and confined space Possibly this is one of the reasons why Swiss German dialects have been investigated thoroughly on various linguistic levels Nevertheless natural speech intonation has until today not been examined systematically The aim of this study is to analyze natural Swiss German fundamental frequency behavior according to linguistic paralinguistic and extralinguistic variables using statistical tests against the backdrop of detecting dialect specific patterns as well as cross dialectal differences The intonation analyses were conducted with the mathematically formulated Command Response model This is the first large scale study that applies this framework on a large corpus of natural dialectal speech This contribution provides a holistic account of the truly multilayered features of natural speech intonation and brings to light detailed underlying patterns of Swiss German dialectal fundamental frequency behavior The book is mainly targeted at linguists speech scientists as well as dialectologists
