Ideas, Machines, and Values Stephen H. Cutcliffe, 2000 Ideas Machines and Values is an introductory overview of the emergence of STS as a field of study as well as a portrait of its current interests and concerns The book examines the growth of STS from its birth inthe mid 1960 s through its development as an interdisciplinary field to its present state Also addressed are the questions Why should we study STS and In what direction should STS be headed This work is highly recommended for anyone interested in building a solid foundation for Science Technology and Society Studies Science and Technology Studies Sergio Sismondo, 2011-08-17 An Introduction to Science and Technology Studies Second Edition reflects the latest advances in the field while continuing to provide students with a road map to the complex interdisciplinary terrain of science and technology studies Distinctive in its attention to both the underlying philosophical and sociological aspects of science and technology Explores core topics such as realism and social construction discourse and rhetoric objectivity and the public understanding of science Includes numerous empirical studies and illustrative examples to elucidate the topics discussed Now includes new material on political economies of scientific and technological knowledge and democratizing technical decisions Other features of the new edition include improved readability updated references chapter reorganization and more material on medicine and technology Science, Technology and Society Wenceslao J. González, 2005 The emphasis on the realm of Science Technology and Society or Science and Technology Studies may have the same degree of relevance that the historical turn had in the past It is a social turn which affects philosophy of science as well as philosophy of technology It includes a new vision of the aims processes and results of scientific activities and technological doings because the focus of attention is on several aspects of science and technology which used to be considered as secondary or even irrelevant This turn highlights science and technology as social undertakings rather than intellectual contents According to this new vision there are several important changes as to what should be studied the objects of research how it should be studied the method and what the consequences for those studies are The new focus of attention can be seen in many changes and among them are several of special interest a from what science and technology are in themselves mainly epistemic contents to how science and technology are made largely social constructions b from the language and structure of basic science to the characteristics of applied science and the applications of science c from technology as a feature through which human beings control their natural surroundings a step beyond technics due to the contribution of science to technology as a social practice and an instrument of power and d from the role of internal values necessary for mature science and innovative technology to the role of contextual or external values cultural political economic of science and technology Wenceslao J Gonzalez is professor of logic and philosophy of science at the University of A Coru a Spain He has been vicedean of the School of Humanities and president of the Committee of Doctoral Programs at the University He has been a visting researcher at the Universities of St Andrews M nster and London London School of

Economics as well as Visiting fellow at the Center for Philosophy of Science University of Pittsburgh He has given lectures at the Universities of Pittsburgh Stanford Ouebec and Helsinki The conferences in which he has participated include those organized by the Universities of Uppsala New South Wales Bologne and Canterbury New Zealand He has edited 20 volumes and published 70 papers He is the editor of the monographic issues on Philosophy and Methodology of Economics 1998 and Lakatos s Philosophy Today 2001 His writings include Economic Prediction and Human Activity An Analysis of Prediction in Economics from Action Theory 1994 On the Theoretical Basis of Prediction in Economics 1996 Rationality in Economics and Scientific Predictions A Critical Reconstruction of Bounded Rationality and its Role in Economic Predictions 1997 Lakatos s Approach on Prediction and Novel Facts 2001 Rationality in Experimental Economics An Analysis of R Selten's Approach 2003 From Erkl renVerstehen to PredictionUnderstanding The Methodological Framework in Economics 2003 and The Many Faces of Popper's Methodological Approach to Prediction 2004 Visions of STS Stephen H. Cutcliffe, Carl Mitcham, 2012-02-01 Visions of STS brings together the views of ten leading scholars to clarify the nature of Science Technology and Society Studies and point toward future developments The interdisciplinary field of STS maps out the interconnected relationships among science technology and society in order to better understand both the innumerable benefits as well as problematic challenges This book rather than presenting science and technology as autonomous entities analyzes each contextually as societal mediated processes that reflect cultural political and economic values It contains four basic programmatic essays that deal with technological determinism the social constructivist view STS and policy information and the issue of interdisciplinarity Visions of STS also stresses more specialized perspectives of work education and public policy analysis and challenges the way STS itself is pursued Taken together these essays offer an exciting and unusually broad overview of STS Science, Technology and Society, 2000 The Oxford Handbook of Interdisciplinarity Robert Frodeman, Julie Thompson Klein, Roberto Carlos Dos Santos Pacheco, 2017-01-26 Interdisciplinarity has become as important outside academia as within Academics policy makers and the general public seek insights to help organize the vast amounts of knowledge being produced both within research and at all levels of education The second edition of The Oxford Handbook of Interdisciplinarity offers a thorough update of this major reference work summarizing the latest advances within the field of inter and transdisciplinarity The collection is distinguished by its breadth of coverage with chapters written by leading experts from multiple networks and organizations. The volume is edited by respected interdisciplinary scholars and supported by a prestigious advisory board to ensure the highest quality and breadth of coverage The Oxford Handbook of Interdisciplinarity provides a synoptic overview of the current state of interdisciplinary research education administration and management and of problem solving knowledge that spans the disciplines and interdisciplinary fields The volume negotiates the space between the academic community and society at large Offering the most broad based account of inter and transdisciplinarity to date its 47 chapters provide a snapshot of the state of knowledge integration as interdisciplinarity approaches its century mark This second edition expands its coverage to discuss the emergence of new fields the increase of interdisciplinary approaches within traditional disciplines and professions new integrative approaches to education and training the widening international presence of interdisciplinarity its increased support in funding agencies and science policy bodies and the formation of several new international associations associated with interdisciplinarity This reference book will be a valuable addition to academic libraries worldwide important reading for members of the sciences social sciences and humanities engaged in interdisciplinary research and education and helpful for Thinking through Science and administrators and policy makers seeking to improve the use of knowledge in society Technology Glen Miller, Helena Mateus Jerónimo, Qin Zhu, 2023-03-27 Groundbreaking in its range of disciplines and cultural backgrounds Thinking through Science and Technology explores how individual and societal beliefs values and actions are transformed by science technology and engineering Practical and theoretical insights from philosophers policymakers STS scholars and engineers illuminate the promise perils and paradoxes that arise with technoscientific change This collection of original research develops a philosophical understanding of technology and its inscription in a wider web of social and political meanings values and civilizational change It explores foundational beliefs at the core of engineering education and practice with an emphasis on the movement of ideas between Western and Chinese scholars as well as the complex interwoven relationship between ideas from religion science and technology as they have evolved in the West Contributors also critically examine the forces and frameworks that shape the development and evaluation of scientific practice and the innovation and adoption of technology with an emphasis on national and global policy. The volume offers a critical and timely reflection on science and technology that counters trends toward technological optimism on the one hand and disciplinary and cultural regionalization on the other Chapters written by prominent and promising scholars from around the world make this a global resource its breadth and clarity make it a superb introduction for those new to its fields It serves as an essential reference for established scholars as well as anyone seeking a more comprehensive understanding of social and technoscientific entanglements that permeate contemporary life List of contributors Gordon Akon Yamga Jennifer Karns Alexander Andoni Alonso Pamela Andanda Larry Arnhart Li Bocong Albert Borgmann Adam Briggle Jose A L pez Cerezo Mark Coeckelbergh Daniel C r zuelle Neelke Doorn Jean Pierre Dupuy Andrew Feenberg Jose Lu s Garcia Tricia Glazebrook Janna van Grunsven J Britt Holbrook Helena Jer nimo Tong LI Yongmou LIU Lavinia Marin Glen Miller Carl Mitcham Suzanne Moon Byron Newberry Jean Robert Sabine Roeser Taylor Stone Sajay Samuel Daniel Sarewitz Jen Schneider Jos Antonio Ullate Carlos Verdugo Serna Nan WANG Science, Technology & Society, 2000 Making 20th Century Science Stephen G. Brush, Ariel Segal, 2015 Historically the scientific method has been said to require proposing a theory making a prediction of something not already known testing the prediction and giving up the theory or substantially changing it if it fails the test A theory that leads to several successful predictions is more likely to be accepted than one that only explains what is already

known but not understood This process is widely treated as the conventional method of achieving scientific progress and was used throughout the twentieth century as the standard route to discovery and experimentation But does science really work this way In Making 20th Century Science Stephen G Brush discusses this question as it relates to the development of science throughout the last century Answering this question requires both a philosophically and historically scientific approach and Brush blends the two in order to take a close look at how scientific methodology has developed Several cases from the history of modern physical and biological science are examined including Mendeleev's Periodic Law Kekule's structure for benzene the light quantum hypothesis quantum mechanics chromosome theory and natural selection In general it is found that theories are accepted for a combination of successful predictions and better explanations of old facts Making 20th Century Science is a large scale historical look at the implementation of the scientific method and how scientific theories come to be Social Studies of Science and Technology: Looking Back, Ahead B. Joerges, H. Nowotny, 2012-12-06 BERNW ARD IOERGES AND HELGA NOWOTNY YET ANOTHER TURN The thing that doesn t fit is the thing that s most interesting Richard Fcynman This volume was originally conceived as a contribution to yet another tum not cap tured by one of the many adjectives that have served to describe the collective meander ing of the scholarly community in search of direction It was meant to mark the millen nial turn a seemingly purely chronological event but one in search for great meanings and invested with loaded significances. The editors wanted to seize the opportunity of the moment in order to pause and reflect on the sociology and history of social studies of science and technology The moment came and went and the new millennium barely nine months later thrust its historical marker upon the world through a horrendous and cruel shock in an unforeseen and unforeseeable way Since then the world appears more vulnerable and volatile fragmented and fraught with uncertainty The universal values as bequeathed by the Enlightenment are either refused or appear refuted The dream of a universal civilization which has accompanied the unfolding of the existing multiple modernities in their historically unique trajectories has been discarded and its promises in tatters Words in Blood, Like Flowers Babette E. Babich, 2007-06-01 Why did Nietzsche claim to have written in blood Why did Heidegger remain silent after World War II about his participation in the Nazi Party How did H Iderlin's voice and the voices of other more ancient poets come to echo in philosophy Words in Blood Like Flowers is a classical expression of continental philosophy that critically engages the intersection of poetry art music politics and the erotic in an exploration of the power they have over us While focusing on three key figures H Iderlin Nietzsche and Heidegger this volume covers a wide range of material from the Ancient Greeks to the vicissitudes of the politics of our times and approaches these and other questions within their hermeneutic and historical contexts Working from primary texts and a wide range of scholarly sources in French German and English this book is an important contribution to philosophy s most ancient quarrels not only with poetry but also with music and erotic love **Encyclopedia** of the Anthropocene, 2017-11-27 Encyclopedia of the Anthropocene Five Volume Set presents a currency based global

Philippe Goujon, Sylvain Lavelle, Penny Duquenoy, Kai Kimppa, Veronique Laurent, 2007-11-15 This volume honors the professional life of Jacques Berleur He is known for his extensive work within the IFIP community to expose the nature of the ethical dilemmas of a society increasingly reliant on complex ICT infrastructures to raise awareness of the social challenges this poses and to influence action compatible with the ethical values of western democracy An Introduction to the Philosophy of Engineering Bocong Li,2021-10-19 This book is the first academic work on the philosophy of engineering in China that reflects two decades of research It puts forward a new thesis namely that the core maxim in the philosophy of engineering is I create therefore I am which is radically different from the Cartesian maxim I think therefore I am In addition the book offers the first detailed portrait of the roots and evolution of the philosophy of engineering in China The book begins by discussing the triptych thesis of science technology and engineering which argues that there are a number of important distinctions between the three e.g. scientific activities are chiefly based on discovery while technological activities center on invention and engineering activities focus on creation Considering the latest developments in the philosophy of engineering the author also analyzes engineering communities engineering practice and a micro meso macro framework In subsequent chapters the author separately analyzes the three stages of engineering activities planning operating and using artifacts In the closing chapter two views on the philosophy of engineering as a new subdiscipline of philosophy and as a philosophy in its own right are briefly explained

Creating Value with Science and Technology Eliezer Geisler,2001-08-30 Do science and technology create value for society and the economy and how might one go about measuring it How do we evaluate its benefits Can we even be certain that there are benefits Geisler argues that there are benefits and that they outweigh in value the negative impacts that

inevitably accompany them His revolutionary new book goes on to show that they can also be measured and evaluated and in one volume all of the existing knowledge on how to do it is complied then Geisler's own methods are offered The result is a compelling argument that the value of science and technology in our lives has indeed been positive and that the economic well being of all individuals organizations and nations rests upon them Geisler starts off by describing his conceptual framework for the evaluation of science and technology and the impact and benefits that proceed from them He discusses the nature of evaluation in general terms and then in the specific context of science technology and innovation together He reviews the state of our present knowledge and assesses the nature of value creation itself Throughout Geisler remains fixed on his driving thesis Although there are certainly some negative impacts from science and technology on the whole the results of its outputs are positive He shows how they have contributed to a range of activities and institutions particularly to the improvement of health and human welfare worldwide Finally after discussing the theories of evaluation he gets down to the practice providing readers with a way to assess science and technological innovations for themselves and the Evolving Knowledge Society: Ethical Issues in Technological Design, Research, Development, and **Innovation** Luppicini, Rocci, 2010-01-31 This book introduces the reader to the key concepts and issues that comprise the emerging field of Technoethics the interdisciplinary field concerned with all ethical aspects of technology within a society Science Studies during the Cold War and Beyond Elena shaped by technology Provided by publisher Aronova, Simone Turchetti, 2016-09-24 This book examines the ways in which studies of science intertwined with Cold War politics in both familiar and less familiar battlefields of the Cold War Taken together the essays highlight two primary roles for science studies as a new field of expertise institutionalized during the Cold War in different political regimes Firstly science studies played a political role in cultural Cold War in sustaining as well as destabilizing political ideologies in different political and national contexts Secondly it was an instrument of science policies in the early Cold War the studies of science were promoted as the underpinning for the national policies framed with regard to both global geopolitics and local national priorities As this book demonstrates however the wider we cast our net extending our histories beyond the more researched developments in the Anglophone West the more complex and ambivalent both the science studies and the Cold War become outside these more familiar spaces The national stories collected in this book may appear incommensurable with what we know as science studies today but these stories present a vantage point from which to pluralize some of the visions that were constitutive to the construction of Cold War as a juxtaposition of the liberal democracies in the West and the communist East Philosophy of Engineering, East and West Carl Mitcham, Bocong LI, Byron Newberry, Baichun ZHANG, 2018-02-06 This co edited volume compares Chinese and Western experiences of engineering technology and development In doing so it builds a bridge between the East and West and advances a dialogue in the philosophy of engineering Divided into three parts the book starts with studies on epistemological and ontological issues with a special

focus on engineering design creativity management feasibility and sustainability Part II considers relationships between the history and philosophy of engineering and includes a general argument for the necessity of dialogue between history and philosophy It continues with a general introduction to traditional Chinese attitudes toward engineering and technology and philosophical case studies of the Chinese steel industry railroads and cybernetics in the Soviet Union Part III focuses on engineering ethics and society with chapters on engineering education and practice in China and the West The book s analyses of the interactions of science engineering ethics politics and policy in different societal contexts are of special interest The volume as a whole marks a new stage in the emergence of the philosophy of engineering as a new regionalization of philosophy This carefully edited interdisciplinary volume grew out of an international conference on the philosophy of engineering hosted by the University of the Chinese Academy of Sciences in Beijing It includes 30 contributions by leading philosophers social scientists and engineers from Australia China Europe and the United States Science and Religion Zara Thokozani Kamwendo, 2024-10-04 This edited volume offers new and exciting perspectives on the social study of science and religion through current scholarship grounded in Science and Technology Studies STS The contributors explore how STS theories methods and concepts can be applied to the study of religion as well as how to incorporate aspects of religion into STS The purpose of the volume is to advance the social study of science and religion by fostering the already interdisciplinary nature of the field and to encourage engagement with the intersection between science and religion from a wide range of perspectives **Adaptation of Western Economics by Russian Universities** Tatiana Suspitsyna, 2005-08-23 This book examines an intercultural translation of economics as an academic field from Western to post Soviet university settings
