Fidia Research Foundation Neuroscience Award Lectures, 1990 *Fidia Research Foundation neuroscience award lectures. 4. 1988 - 1989 (1990)* Jean-Pierre Changeux, Fidia Research Foundation, 1990 **Fidia Research Foundation Neuroscience Award Lectures**, 1990 Fidia Research Foundation Neuroscience Award Lectures, 1989-90 FIDIA Research Foundation Neuroscience Award Lectu, 1986 Fidia Research Foundation Neuroscience Award Lectures Eric M. Shooter, 1989 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1989 **Published Scientific Papers of the National Institutes of Health** National Institutes of Health (U.S.), 1990 Presents the broad outline of NIH organizational structure the professional staff and their scientific and technical publications covering work done at NIH **Neurotransmitter Receptors** F. Hucho, 1994-03-17 This comprehensive compilation provides a wealth of information on receptor sequences produced by recombinant DNA techniques used in combination with classical biochemistry To minimize redundancies in this wealth of information only a few receptors some of which are typical for a whole group of similar receptors others which are presently of special interest are dealt with in a full size chapter Others are represented in the TIPS Receptor Nomenclature Supplement which is included as a special feature in this book making this volume more useful as a receptor handbook **Ion Channels** T. Narahashi, 2013-12-01 Further establishes the reputation of the series an invaluable resource Trends in Pharmacological Sciences from a review of Volume 3 Volume 4 explores such emergent topics as three dimensional conceptions of ion channel proteins based on the available structural and functional data the structure pharmacology and regulation of the GABAA receptors and the Ca² dependent K channels in adrenal chromatic cell membranes Molecular Basis of Neurological Disorders and Their Treatment J.W. Gorrod, A. Albano, E. Ferrari, S. Papa, 2012-12-06 cytochemical techniques ICC which provide a useful adjunct to investigations by immunoblotting A particular advantage of a cytochemical approach to the investigation of mitochondrial disorders is that it allows the mosaic distribution of certain of these defects to be detected whereas the tissue homogenization involved in conventional enzyme assays or immunoblotting precludes this A further advantage of MEA or ICC is that only small amounts of tissue are needed which is important since many of the affected patients are infants or small children The main aim of this communication is to outline ways in which these techniques can be used in the diagnosis and further investigation of mitochondrial disorders Reference will be made not only to those situations in which MEA and ICC offer advantages over standard enzyme assays and immunoblotting but also to contexts in which the reverse applies 4 2 MATERIALS AND METHODS Muscle biopsies for cytochemical investigation were snap frozen using isopentane cooled to 150 C in liquid nitrogen Samples were stored in heat sealed polythene packets in the vapour phase of liquid nitrogen containers 4 2 1 Microphotometric enzyme assays Frozen sections 8 Jlm thick were cut using a Reichert Jung Frigocut cryostat microtome equipped with motor driven cutting action to maintain maximal reproducibility of section thickness Sections were picked up on microscope slides and air dried for 15

min at room temperature

Membrane Proteins: Structures, Interactions and Models A. Pullman, Joshua Jortner, 2012-12-06 The 25th Jerusalem Symposium represents a most significant highlight in the development and history of these meetings Living within the decimal system we have celebrated with much pleasure the 10th and the 20th Jerusalem Symposia With this one we experience a feeling of particular satisfaction because 25 years is different from more than two decades and a half It is a quarter of a century It seems thus as if we have changed the dimension of our endeavour In no way do we lose the sense of modesty with respect to the significance of these meetings For the organizers however they do represent a continuity of efforts which we feel happy to have been able to carry out At this occasion it seems useful to say a few words about the origin of the Jerusalem Symposia and to recall the name of a colleague who played an essential role in their creation and has been a most efficient and devoted co organizer of the seven first of them This was Professor Ernst Bergmann one of the most distinguished founders of Israeli Science and a world famous physico organic chemist

Receptor Subunits and Complexes A. Burgen, E. A. Barnard, 1992-06-18 This volume provides a wide ranging review of the variety and specificity of receptors including those for neurotransmitters hormones growth factors oncogenes and antigens and looks in depth at the fundamental features of multi subunit complexes and their vital role in coordinating and controlling the functions of the body These receptors for hormones and drugs are mostly constituted from protein subunits They may be organised as ligand operated ion channels in a cell membrane or they may be concerned with enzyme activation to generate second messengers or DNA transcription following a change in the association disassociation state of the receptor complex Advances at the molecular level have enabled scientists to relate the structure of these receptor subunits to their specific mode of action and their function and this in turn is leading the way forward to exciting new research with important medical consequences for the treatment of disease The fourteen chapters in this volume summarise these advances across a wide range of disciplines and the resulting publication will therefore be of interest to research scientists in endocrinology immunology pharmacology oncology and neurobiology

Physiology Or Medicine, 1991-1995 Nils Ringertz, 1997 During the period 1991-1995 important areas of physiological medical research being recognized were ion channels in cells protein phosphorylation split genes G proteins and genetic control of embryonic development The following is a list of the Nobel laureates for those years with a description of the works that won them their prizes 1991 E NEHER 1992 E H FISCHER 1993 R J ROBERTS 1994 A G GILMAN 1995 E B LEWIS C N SLEIN VOLHARD E F WIESCHAUS for their discoveries concerning the genetic control of early embryonic development

Cellular Metabolism of the Arterial Wall and Central Nervous System Gotthard Schettler, Heiner Greten, Andreas J.R. Habenicht, 2012-12-06 International experts review the molecular biology of ion channels diseases of the central nervous system including Alzheimer's disease the molecular biology of atherogenesis plasma lipoproteins lipid transport long chain fatty acid transport and metabolism and lipoprotein receptors Future directions and

perspectives and common features in these important areas are discussed **Genetic Engineering** Jane K.

Davis, 1994 The authors encompass a broad background from biophysics and electrophysiology to psychophysics neurology and computational vision However all the chapters focus on a common issue the role of the primate including human cerebral cortex in memory visual perception focal attention and awareness *Large Scale Neuronal Theories of the Brain* brings together thirteen original contributions by some of the top scientists working in neuroscience today It presents models and theories that will most likely shape and influence the way we think about the brain the mind and interactions between the two in the years to come Chapters consider global theories of the brain from the bottom up providing theories that are based on real nerve cells their firing properties and their anatomical connections This contrasts with attempts that have been made by psychologists and by theorists in the artificial intelligence community to understand the brain strictly from a psychological or computational point of view The authors encompass a broad background from biophysics and electrophysiology to psychophysics neurology and computational vision However all the chapters focus on a common issue the role of the primate including human cerebral cortex in memory visual perception focal attention and awareness Contributors Horace Barlow Patricia Churchland V S Ramachandran and Terrence J Sejnowski Antonio R Damasio and Hanna Damasio Robert Desimone Earl K Miller and Leonardo Chelazzi Christof Koch and Francis Crick Rodolfo R Llinas and Urs Ribary David Mumford Tomaso Poggio and Anya Hurlbert Michael I Posner and Mary K Rothbart Wolf Singer Charles F Stevens Shimon Ullman David C Van Essen Charles W Anderson and Bruno A Olshausen

Brain Functions of Neuropeptides: A Current View J.P.H. Burbach, D. de Wied, 1993-05-15 *Brain Functions of Neuropeptides* contains capita selecta on neuropeptides by leading scientists in the neurosciences As a guide through the wealth of neuropeptide research the authors here present current and personal views on the roles that neuropeptide functions have in the nervous system and their mode of action The authors address an audience that includes readers at the undergraduate level in life sciences but also experts who are interested in timely issues *Induced Rhythms in the Brain* Basar, Bullock, 2013-04-17 It is easy to imagine the excitement that pervaded the neurological world in the late 1920 s and early 1930 s when Berger's first descriptions of the electroencephalogram appeared Berger was not the first to discover that changes in electric potential can be recorded from the surface of the head but it was he who first systematized the method and it was he who first proposed that explanatory correlations might be found between the electroencephalogram brain processes and behavioral states An explosion of activity quickly followed studies were made of the brain waves in virtually every conceivable behavioral state ranging from normal human subjects to those with major psychoses or with epilepsy to state changes such as the sleep wakefulness transition There evolved from this the discipline of Clinical Electroencepha

lography which rapidly took a valued place in clinical neurology and neuro surgery Moreover use of the method in experimental animals led to a further understanding of such state changes as attention inattention arousal and sleep and wakefulness The evoked potential method derived from electro encephalography was used in neurophysiological research to construct precise maps of the projection of sensory systems upon the neocortex These maps still form the initial guides to studies of the cortical mechanisms in sensation and perception The use of the event related potential paradigm has proved useful in studies of the brain mechanisms of some cognitive functions of the brain
