Fifty Years Of Ocean Discovery:

50 Years of Ocean Discovery National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Ocean Studies Board, 2000-02-03 This book describes the development of ocean sciences over the past 50 years highlighting the contributions of the National Science Foundation NSF to the field's progress. Many of the individuals who participated in the exciting discoveries in biological oceanography, chemical oceanography, physical oceanography and marine geology and geophysics describe in the book how the discoveries were made possible by combinations of insightful individuals, new technology and in some cases serendipity. In addition to describing the advance of ocean science, the book examines the institutional structures and technology that made the advances possible and presents visions of the field's future. This book is the first ever documentation of the history of NSF's Division of Ocean Sciences, how the structure of the division evolved to its present form and the individuals who have been responsible for ocean sciences at NSF as rotators and career staff over the past 50 years.

Science at Sea National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on Evolution of the National Oceanographic Research Fleet, 2009-11-23 The U.S. academic research fleet is an essential national resource and it is likely that scientific demands on the fleet will increase. Oceanographers are embracing a host of remote technologies that can facilitate the collection of data but will continue to require capable, adaptable research vessels for access to the sea for the foreseeable future. Maintaining U.S. leadership in ocean research will require investing in larger and more capable general purpose Global and Regional class ships involving

the scientific community in all phases of ship design and acquisition and improving coordination between agencies that operate research fleets

Women and Geology Beth A. Johnson, 2018-07-26 Women have been a part of the story of geology from the beginning but they have struggled to gain professional opportunities equal pay and respect as scientists for decades Some have been dismissed some have been forced to work without pay and some have been denied credit This volume highlights the progress of women in geology including past struggles and how remarkable individuals were able to overcome them current efforts to draw positive attention and perceptions to women in the science and recruitment and mentorship efforts to attract and retain the next generation of women in geology Chapters include the first American women researchers in Antarctica a survey of Hollywood disaster movies and the casting of women as geologists social media campaigns such as 365ScienceSelfies and the stories of the Association for Women Geoscientists and the Earth Science Women's Network and their work to support and mentor women in geology

Paleobiology of the Polycystine Radiolaria David Lazarus,Noritoshi Suzuki,Yoshiyuki Ishitani,Kozo Takahashi,2020-12-09 Polycystine radiolaria are exclusively marine protists and are found in all ocean waters from polar regions to the tropics and at all water depths There are approximately 600 distinct described living species and several thousand fossil species of polycystines Radiolarians in general and polycystines in particular have recently been shown to be a major component of the living plankton and important to the oceanic carbon cycle As fossils radiolarians are also fairly common and often occur in sediments where other types of fossils are absent This has made them very valuable for certain types of geologic research particularly estimating the geologic age of the sediments containing them and as guides to past oceanic water conditions As our current understanding of the biology and even taxonomy of the living fauna is still very incomplete evolutionary studies based on living polycystines are still rare However the common occurrence of numerous specimens for many species and in a wide variety of oceanic environments provides an excellent opportunity to study the processes of biologic evolution in the fossil record Paleobiology of the Polycystine Radiolaria is the first major book on radiolarians to appear in the western literature since 2001 Focusing on living and fossil siliceous shelled radiolarians it is notable for its emphasis not upon morphologic or taxonomic detail but on concepts and applications The book attempts to provide a balanced critical review of what is known of the biology ecology and fossil record of the group as well as their use in evolutionary biostratigraphic and paleoceanographic research Full chapters on the history of study and molecular biology are the first ever in book form Written for an audience of advanced undergraduate to doctoral students as well as for a broad range of professionals in the biological and Earth sciences Paleobiology of the Polycystine Radiolaria summarizes current understanding of the marine planktonic protist group polycystine radiolaria both in living and fossil form **The Machine in Neptune's Garden** Helen M. Rozwadowski,David K. Van Keuren,2004 Science on a Mission Naomi Oreskes,2021-04-19 A vivid portrait of how Naval oversight shaped American oceanography revealing what difference it makes who pays for science What difference does it make who pays for science Some might say none If scientists seek to discover fundamental truths about the world and they do so in an objective manner using well established methods then how could it matter who's footing the bill History however suggests otherwise In science as elsewhere money is power Tracing the recent history of oceanography Naomi Oreskes discloses dramatic changes in American ocean science since the Cold War uncovering how and why it changed Much of it has to do with who pays After World War II the US military turned to a new uncharted theater of warfare the deep sea The earth sciences particularly physical oceanography and marine geophysics became essential to the US Navy which poured unprecedented money and logistical support into their study Science on a

Mission brings to light how this influx of military funding was both enabling and constricting it resulted in the creation of important domains of knowledge but also significant lasting and consequential domains of ignorance As Oreskes delves into the role of patronage in the history of science what emerges is a vivid portrait of how naval oversight transformed what we know about the sea It is a detailed sweeping history that illuminates the ways funding shapes the subject scope and tenor of scientific work and it raises profound questions about the purpose and character of American science What difference does it make who pays The short answer is a lot *Ceylon* James Emerson Tennent,2018-01-31 Reproduction of the original
