Fighting Agents:

The Fighting Agents W.E.B. Griffin, 2001-05-01 The Philippines 1943 As the ragged remnants of the American forces stand against the might of the Imperial Japanese Army a determined cadre of OSS agents becomes their only contact with the outside world and their only hope for survival **NIST Special Publication**, 1996 Advances on Practical Applications of Agents and Multi-Agent Systems Yves Demazeau, Toru Ishida, Juan Manuel Corchado Rodríguez, Javier Bajo Pérez, 2013-04-17 This book constitutes the refereed proceedings of the 11th International Conference on Practical Applications of Agents and Multi Agent Systems PAAMS 2013 held in Salamanca Spain in May 2013 The 14 revised full papers and 9 short papers presented together with 16 demonstrations were carefully reviewed and selected from 70 submissions The papers report on the application and validation of agent based models methods and technologies in a number of key application areas including agents for real world problems crowd modeling and analysis decision making and discovery interaction with artificial agents mobility ubiquity and clouds multi agent design technology and simulation and organization MICAI 2000: Advances in Artificial Intelligence Osvaldo Cairo, Enrique L. Sucar, Francisco J. Cantu, 2006-12-30 Fifty years ago A Turing predicted that by 2000 we would have a machine that could pass the Turing test Although this may not yet be true AI has advanced significantly in these 50 years and at the dawn of the XXI century is still an active and challenging field This year is also significant for AI in Mexico with the merging of the two major AI conferences into the biennial Mexican International Conference on Artificial Intelligence MICAI series MICAI is the union of the Mexican National AI Conference RNIA and the International AI Symposium ISAI organized annually by the Mexican Society for AI SMIA since 1984 and by the Monterrey Institute of Technology ITESM since 1988 respectively The first Mexican International Conference on Artificial Intelligence MICAI 2000 took place April 11-14 2000 in the city of Acapulco Mexico This conference seeks to promote research in AI and cooperation among Mexican researchers and their peers worldwide We welcome you all Over 163 papers from 17 different countries were submitted for consideration to MICAI 2000 After reviewing them thoroughly MICAI's program committee referees and program chair accepted 60 papers for the international track This volume contains the written version of the papers and invited talks presented at MICAI We would like to acknowledge the support of the American Association for Artificial Intelligence AAAI and the International Joint Conference on Artificial Intelligence IJCAI We are specially grateful for the warm hospitality and generosity offered by the Acapulco Institute of Technology **Fathom**, 1969 **Innovative Approaches to Planning, Scheduling and Control** Katia P. Sycara, 1990 **Principles of Noology** Seng-Beng Ho, 2016-06-29 The idea of this book is to establish a new scientific discipline noology under which a set of fundamental principles are proposed for the characterization of both naturally occurring and artificial intelligent systems The methodology adopted in Principles of Noology for the characterization of intelligent systems or noological systems is a computational one much like that of AI Many AI devices such as predicate logic

representations search mechanisms heuristics and computational learning mechanisms are employed but they are recast in a totally new framework for the characterization of noological systems The computational approach in this book provides a quantitative and high resolution understanding of noological processes and at the same time the principles and methodologies formulated are directly implementable in AI systems In contrast to traditional AI that ignores motivational and affective processes under the paradigm of noology motivational and affective processes are central to the functioning of noological systems and their roles in noological processes are elucidated in detailed computational terms In addition a number of novel representational and learning mechanisms are proposed and ample examples and computer simulations are provided to show their applications These include rapid effective causal learning a novel learning mechanism that allows an AI noological system to learn causality with a small number of training instances learning of scripts that enables knowledge chunking and rapid problem solving and learning of heuristics that further accelerates problem solving Semantic grounding allows an AI noological system to truly understand the meaning of the knowledge it encodes This issue is extensively explored This is a highly informative book providing novel and deep insights into intelligent systems which is particularly relevant to both researchers and students of AI and the cognitive sciences **Monitoring, Security, and Rescue**

Techniques in Multiagent Systems Barbara Dunin-Keplicz, Andrzej Jankowski, Marcin Szczuka, 2006-08-13 In today's society the issue of security has become a crucial one The use of knowledge based technology in security applications emerges with important applications in monitoring control crisis and rescue management This volume contains extended and improved versions of selected contributions presented at the International Workshop Monitoring Security and Rescue Techniques in Multiagent Systems MSRAS 2004 held in Plock Poland June 7-9 2004 bringing together the world's leading researchers in the field **Advances in Artificial Life** Jozef Kelemen, Petr Sosik, 2003-06-30 Why is the question of the difference between living and non living matter intellectually so attractive to the man of the West Where are our dreams about our own ability to understand this difference and to overcome it using the firmly established technologies rooted Where are for instance the cultural roots of the enterprises covered nowadays by the discipline of Artificial Life Contemplating such questions one of us has recognized the existence of the eternal dream of the man of the West expressed for example in the Old Testament as follows the Lord God formed the man from the dust of the ground and breathed into his nostrils the breath of life and the man became a living being Genesis 2:7 This is the dream about the workmanlike act of the creation of Adam from clay about the creation of life from something non living and the confidence in the magic power of technologies How has this dream developed and been converted into a reality and how does it determine our present day activities in science and technology What is this confidence rooted in Then God said Let us make man in our image Genesis 1:26 Man believes in his own ability to repeat the Creator's acts to change ideas into real things because he believes he is godlike This confidence is using the trendy Dawkins term perhaps the most important cultural meme of the West *Fire Service Hydraulics* Dick
