Taylor, 2009-03-12 Environmental Sedimentology provides a comprehensive introduction to this rapidly expanding field which addresses the functioning and dynamics of contemporary sediment systems and how these systems respond to a range of both natural and anthropogenically induced disturbance events considers a range of sedimentary environments mountain and upland fluvial lacustrine arid urban deltaic and estuarine temperate coastal tropical coastal and continental shelf aspects of sediment management and remediation are also considered as are the potential impacts of on going and future climatic and environmental change Readership advanced level undergraduates in earth science environmental science and physical geography and graduate students in the earth and environmental sciences with an interest in contemporary sediment systems Sea-Level Rise and Coastal Subsidence: Causes, Consequences, and Strategies J.D. Milliman, B.U.

Haq, 1996-02-29 Greenhouse induced climate warming increasingly appears to be a reality and the warming climate will be accompanied by an accelerated sea level rise as much as 60 100 cm over the next century What is commonly absent in the discussion of rising sea level however is the role played by the subsidence of low lying coastal areas which can have a far greater local effect than the eustatic rise of the sea The combined sea level rise and land subsidence will almost certainly make the greatest impact on coastal societies in the densely populated regions of southern Asia but its effects will be felt globally This volume explores the concepts of sea level rise and coastal subsidence both natural and anthropogenically accelerated in the form of a series of case studies in such diverse locations as Bangkok Bangladesh Venice and the Niger and Mississippi deltas as well as a discussion of the economic engineering and policy responses that must be considered if the effects of local sea level rise are to be mitigated **Geospatial Technologies in Land Resources Mapping, Monitoring and Management** G. The Structure, Function and Management Implications of Fluvial Sedimentary Systems Fiona J. Dyer, Martin C. Thoms, Jon M. Olley, 2002 **Forest Hydrology** Mingteh Chang, 2006-05-25 Although a few texts on forest hydrology are available they cover very little if any background on water resources On the other hand books dealing with water resources do not cover topics on forest water relations The one exception to this is Forest Hydrology An Introduction to Water and Forests Now with the publication of a revised edition this volume adds information from recent studies to go even further in providing an introduction to forest hydrology that brings water resources and forest water relations into a single practical and comprehensive volume Focusing on processes and general principles the first six chapters provide an introduction and basic background in water and water resources while the last seven chapters look at the impact of forests on water Between these two groupings is a chapter that serves as an entry to the study of forest impacts on water resources describing forests and forest characteristics important to water circulation sediment movement and stream habitat This second edition also features new information on forests and flooding forest and stream habitat snow vaporization processes and GIS methods in

hydrology research examples on evaporation estimates and a new appendix on forest interception measurements Employing examples and case studies the book provides tools to help natural resource managers play an active role in policymaking and land use planning and in developing partnerships with stakeholders It also offers unique perspectives for addressing urban sprawl
