processes that build and erode mountains and regulate Earth's climate. Efforts to study Earth's intertwined processes are made even more pertinent and urgent by the need to understand how the Earth can continue to sustain both civilization and the planet's biodiversity. A Vision for NSF Earth Sciences 2020-2030 Earth in Time provides recommendations to help the National Science Foundation plan and support the next decade of Earth science research focusing on research priorities infrastructure and facilities and partnerships. This report presents a compelling and vibrant vision of the future of Earth science research.

History of Geoscience W. Mayer, R.M. Clary, L.F. Azuela, T.S. Mota, S. Wołkowicz, 2017-06-06 The study of the Earth's origin its composition the processes that changed and shaped it over time and the fossils preserved in rocks have occupied enquiring minds from ancient times. The contributions in this volume trace the history of ideas and the research of scholars in a wide range of geological disciplines that have paved the way to our present day understanding and knowledge of the physical nature of our planet and the diversity of life that inhabited it. To mark the 50th anniversary of the founding of the International Commission on the History of Geology INHIGEO the book features contributions that give insights into its establishment and progress. In other sections authors reflect on the value of studying the history of the geosciences and provide accounts of early investigations in fields as diverse as tectonics volcanology geomorphology vertebrate palaeontology and petroleum geology. Other papers discuss the establishment of geological surveys the contribution of women to geology and biographical sketches of noted scholars in various fields of geoscience.

Earth's Magnetospheric Processes Billy McCormac, 2012-12-06 This book contains the lectures presented at the Summer Advanced Institute and Ninth ESRO Summer School which was held in Cortina Italy during the period August 30 through September 10 1971. One hundred seventy nine persons from eighty eight different countries attended. The authors and the publisher have made a special effort for rapid publication of an up to date status of the particles fields and processes in the Earth's magnetosphere which is an ever changing area. Special thanks are due to the lecturers for their diligent preparation and excellent presentations. The individual lectures and the published papers were deliberately limited; the author's cooperation in conforming to these specifications is greatly appreciated. The contents of the book are organized by subject area rather than in the order in which papers were presented during the Institute School. Many thanks are due to Drs J. Ronald Burrows James W. Dungey Harry Elliot Roger Gendrin Edward W. Hones Jr. Reimar Liist and J. Ortner who served as session chairmen during the Institute and contributed greatly to its success by skillfully directing the discussion period in a stimulating manner after each lecture. Many persons contributed to the success of the Institute School. The co-chairman Dr. Reimar Liist was most helpful during all phases of the preparation and planning. Drs J. Ronald Burrows Harry Elliot Carl Gunne Fiilthammar M. Giorgi J. Ortner J. R. U. Page Alois Schardt James A. Van Allen and Martin Walt were especially helpful in

The United States possesses a treasure trove of extraterrestrial samples that were returned to Earth via space missions over the past four decades Analyses of these previously returned samples have led to major breakthroughs in the understanding of the age composition and origin of the solar system Having the instrumentation facilities and qualified personnel to undertake analyses of returned samples especially from missions that take up to a decade or longer from launch to return is thus of paramount importance if the National Aeronautics and Space Administration NASA is to capitalize fully on the investment made in these missions and to achieve the full scientific impact afforded by these extraordinary samples Planetary science may be entering a new golden era of extraterrestrial sample return now is the time to assess how prepared the scientific community is to take advantage of these opportunities Strategic Investments in Instrumentation and Facilities for Extraterrestrial Sample Curation and Analysis assesses the current capabilities within the planetary science community for sample return analyses and curation and what capabilities are currently missing that will be needed for future sample return missions This report evaluates whether current laboratory support infrastructure and NASA s investment strategy is adequate to meet these analytical challenges and advises how the community can keep abreast of evolving and new techniques in order to stay at the forefront of extraterrestrial sample analysis **Book Catalog of the Library and Information Services Division: Author-title-series indexes** Environmental Science Information Center.
