Fellenius, 2017-03-17 The Red Book presents a background to conventional foundation analysis and design The text is not intended to replace the much more comprehensive standard textbooks but rather to support and augment these in a few important areas supplying methods applicable to practical cases handled daily by practising engineers and providing the basic soil mechanics background to those methods It concentrates on the static design for stationary foundation conditions Although the topic is far from exhaustively treated it does intend to present most of the basic material needed for a practising engineer involved in routine geotechnical design as well as provide the tools for an engineering student to approach and solve common geotechnical design problems **Performance Specifications for Rapid Highway Renewal** Sidney Scott

III and Linda Konrath, This report from the second Strategic Highway Research Program SHRP 2 which is administered by

the Transportation Research Board of the National Academies describes suggested performance specifications for different application areas and delivery methods that users may tailor to address rapid highway renewal project specific goals and conditions

Modern Earth Structures for Transport Engineering Ivan Vaníček, Daniel Jirásko, Martin Vaníček, 2020-04-04

Nowadays demands on modern civil engineering structures require not only safe technical solutions but also additional approaches involving ecological sociological and economical aspects This book reacts on these new requirements with a focus on earth structures for transport engineering mainly for motorways and railways Technical demands have to be adequately related to the risk with which the design and execution are connected Soil used for the construction together with subsoil are natural materials with a high degree of inhomogeneity Therefore the risk when constructing with such materials is much higher than for structures utilizing man made materials The engineering approach is firstly focused on the geotechnical risk identification and subsequently on the reduction of this risk Geotechnical risk is linked to the uncertainties for individual phases of the design and construction processes Ground model geotechnical design model calculation model and structure execution are the main phases of the above mentioned processes Risk reduction involves the lowering of the range of uncertainties for individual phases guaranteeing safe and optimal technical solutions Eurocode 7 Geotechnical design creates a general frame of this risk identification and reduction approach Earth structures are offering great opportunities for sustainability approach Therefore the possibilities how to decrease consumption of land greenfields energy and natural aggregates are at the centre of interest In parallel to sustainability the principles of availability and affordability for transport infrastructures are discussed The main aim there is to eliminate the impact of interaction of the transport infrastructure with natural and man made hazards thus guaranteeing long term functionality This book will be of interest to specialists responsible for transport infrastructure planning investors project owners of motorways and railways and environmental engineers The main focus is on those responsible for geotechnical investigations earth structures design and on contractors of such structures

Ground Control and Improvement Petros P. Xanthakos, Lee W. Abramson, Donald A. Bruce, 1994-06-14 A comprehensive compilation concerned with a variety of modern methods being used worldwide to improve soil and rock conditions supporting new and remedial construction Ground water lowering and drainage techniques soil compaction excavation support methods permeation and jet grouting are among the many topics discussed More than 100 tables and 650 figures illustrate the text
