## **Geotechnical Engineering Of Hard Soils:**

*Comptes Rendus Du 15ème Congrès Européen de Mécanique Des Sols & de Géotechnique : la Géotechnique Des Sols Indurés, Roches Tendres* Andreas Anagnostopoulos, Michael Pachakis, Christos Tsatsanifos, 2013 This publication contains the papers presented at the 15th European Conference on Soil Mechanics and Geotechnical Engineering ECSMGE held in Athens Greece Considerable progress has been made in recent decades in understanding the engineering behavior of those hard soils and weak rocks that clearly fall into either the field of soil or of rock mechanics and there have been important developments in design and construction methods to cope with them Progress would be even more desirable however for those materials which fall into the grey area between soils and rocks They present particular challenges due to their diversity the difficulties and problems arising in their identification and classification their sampling and testing and in the establishment of suitable models to adequately describe their behavior The publication aims to provide an updated overview of the existing worldwide knowledge of the geological features engineering properties and behavior of such hard soils and weak rocks with particular reference to the design and construction methods and problems associated with these materials Part 4 was published post conference and includes Conference Reports *Geotechnical Engineering of Hard Soils, Soft Rocks: Geological features, investigation and classification. geotechnical engineers involved in the design of shallow foundations      *Unsaturated Soils, Two Volume Set* Eduardo E. Alonso, Antonio Gens, 2010-09-02 In recent decades the development of unsaturated soil mechanics has been remarkable resulting in momentous advances in fundamental knowledge testing techniques computational procedures prediction methodologies and geotechnical practice The advances have spanned the full spectrum of theory and practice In addition unsaturated materials exhibiting complex behaviour such as residual soils swelling soils compacted soils collapsing soils tropical soils and solid wastes have been integrated in a common understanding of shared behaviour features It is also noteworthy that unsaturated soil mechanics has proved surprisingly fruitful in expanding to other neighbouring areas such as swelling rocks rockfill mechanics and freezing soils As a consequence geotechnical engineering involving unsaturated soils can be now approached from a more rational and systematic perspective leading towards an improved and more effective practice *Unsaturated Soils* contains the papers presented at the 5th International Conference on Unsaturated Soil Barcelona Spain 6-8 September 2010 They report significant advances in the areas of unsaturated soil behaviour testing techniques constitutive and numerical modelling and applications The areas of application include soil atmosphere interaction foundations slopes embankments pavements geoenvironmental problems and emerging topics They are complemented by three keynote lectures and three general reports covering general issues of modelling testing and applications *Unsaturated Soils* is a comprehensive record of the state of the art in unsaturated soil mechanics and a sound basis for further progress in the future The two volumes will serve as an essential reference for academics researchers and practitioners interested in unsaturated soils      **Characterisation and Engineering Properties of Natural Soils** T. S. Tan, 2003 This second volume

of a specialty 2 volume work contains 34 papers pertaining to the natural behaviour of diverse geomaterials found in different parts of the world Each paper is organized along the outline location and distribution engineering geology composition state and index properties structure engineering properties quality reliability of data with reference to methods of sampling and testing and relation to engineering problems This extensive body of collated knowledge is integrated by three overview papers covering engineering geology mechanical behaviour and engineering implications Topics Overview papers Marine clays Estuarine Clays Lacustrine clays Stiff clays Sands and other cohesionless soils Residual and other tropical Soils Weak rock      *Unsaturated Soils - Volume 3* J.F.T Juca, T.M.P. de Campos, F.A.M. Marinho, 2021-05-31

Unsaturated materials comprise residual collapsible and expansive naturally occurring soils compacted soils and more recently residues of solid wastes The engineering problems associated with unsaturated materials range from those related to conventional geotechnical works e.g. foundations pavements slopes and excavations retaining structures earthdams irrigation canals tunnelling compacted embankments to those included in the environmental area e.g. natural slope instability erosion and subsidence processes tailings residues or solid waste disposal contaminant transport remediation of contaminant sites engineered barriers for environmental protection re use of residues This book published in three separate volumes

comprises a selection of selected and invited papers presented at the Third International Conference on Unsaturated Soils UNSAT 2002 that took place in Recife Brazil from 10th to 13th March 2002 The book is of interest to consultants researchers practitioners lecturers and students with a background in geotechnical engineering environmental engineering and engineering geology
