 solar radiation The physiological consequences of sun exposure have been systematically studied starting at the end of the  
 nineteenth century and we now have accumulated knowledge about how Caucasian and Asian skins reacts to solar radiation  
 The chemical effects of solar ultraviolet radiation have been analyzed with particular emphasis during the second half of the  
 twentieth century Research on micro organisms has allowed us to understand the mechanisms of UV induced mutagenesis  
 and photosensitization Studies with laboratory rodents have opened the path to the understanding of UV induced immune  
 depression carcinogenesis photo damage and photo aging The results of these studies have enabled other scientists to  
 investigate the same phenomena in human organs such as the skin and the eye UV radiation damages hair as well The  
 present knowledge in these fields is summarized in some of the chapters of this monograph Mass phenomenon in Europe  
 with the generalization of summer vacations which were a consequence of social reforms introducing the concept of paid  
 vacations This created a need for protection and opened a market for sunscreens This monograph is concerned with sun  
 protection as a whole and is not just another book on sunscreens Nonetheless in these days of general concern it is important  
 to learn about the efficiency of sunscreens Several authors discuss how to reduce the number of impinging photons and

explain why sunscreens seem to offer less protection than expected Guidelines are given on how to use sunscreens in everyday life which are expressed rigorously though clearly for access to the common reader Our knowledge on the relationship between sun and humans is at the early stages of development Industrial and commercial activities are concerned by the development of this knowledge and rules have been and will be promulgated to guarantee efficacy and safety of sun products It is hoped that this monograph will be of interest to the scholar the layman and the legislator

**Dietary Reference Intakes** Standing Committee on the Scientific Evaluation of Dietary Reference Intakes,Food and Nutrition Board,Institute of Medicine,1998-08-20 There has been intense interest recently among the public and the media in the possibility that increased intakes of dietary antioxidants may protect against chronic disease Many research programs are underway in this area Epidemiological evidence suggests that the consumption of fruits and vegetables may reduce the risk of both cancer and cardiovascular disease and it has been hypothesized that this is due in part to the presence of antioxidant compounds in fruits and vegetables As a result these compounds have been considered together by many people and loosely termed dietary antioxidants Closer examination however reveals that compounds typically grouped together as dietary antioxidants can differ quite considerably from one another both in terms of their chemical behavior and in terms of their biological properties This report from the Institute of Medicine s Food and Nutrition Board provides a proposed definition of dietary antioxidants so as to characterize the biological properties of these compounds

**Evidence-Based Dermatology** Hywel Williams,Michael Bigby,Thomas Diepgen,Andrew Herxheimer,Luigi Naldi,Berthold Rzany,2009-01-22 Evidence based Dermatology Second Edition is a unique book in the field of clinical dermatology Written and edited by some of the world s leading experts in evidence based dermatology it takes a highly evidence based approach to the treatment of all major and many of the less common skin conditions The toolbox at the beginning of the book explaining how to critically appraise different studies along with the comprehensive reviewing and appraisal of evidence in the clinical chapters make this book distinctive in its field as do the treatment recommendations which are based on the discussion of the best available evidence using a question driven approach and a common structure on
