## **Identification And Supprebion Of Multiple Reflections In Seismic Prospecting:**

Identification And Suppression of Multiple Reflections in Seismic Prospecting Evgeniĭ Alekseevich Kozlov, 1988-12 This monograph is concerned with the three main aspects of dealing with multiple reflections in seismic prospecting and aims to substantiate a set of new techniques for their more effective suppression To increase the accuracy of the Earth s physical parameter estimates 1 D 2 D and 3 D cases earlier time intervals for seismic records are used in combination with the subtraction of predicted materials from target intervals in the course of seismic data inversion The automated identification of multiple events on seismic records in the course of data interpretation is discussed with the aim of improving the reliability with which structural and stratigraphic traps can be located In order to increase the signal to noise ratio modern techniques for the suppression of multiples on either 2 D or 3 D records based on the difference between propagation velocities of multiple and primary waves in the course of data processing are considered The book provides a description of general concepts then focuses on the methodology of data processing and interpretation including theory computational algorithms stability and noise immunity considerations Special attention is given to the practical implementation of the techniques proposed Finally using a large amount of both model and real data examples the book illustrates how to improve the resultant seismic data by the use of developed multiple identification and suppression techniques in various geologic environments
