United States. Congress. Office of Technology Assessment, 1988 *New Developments in Biotechnology: Field-testing engineered organisms*, 1987 *Federal Register*, 2004 **Biotechnology; Managing the Risks of Field Testing Genetically Engineered Organisms**

GENERAL ACCOUNTING OFFICE WASHINGTON DC RESOURCES COMMUNITY AND ECONOMIC DEVELOPMENT DIV., 1988

The Subcommittee on Oversight and Investigations, House Committee on Energy and Commerce requested that GAO review the federal risk management of genetically engineered organisms intended for agricultural and health uses in the environment. This report:

1. evaluates the scope of regulatory policies applicable to deliberate small scale releases
2. reviews the administrative procedures for implementing these policies and
3. identifies technical methods available to control and monitor risks posed by field testing.

It focuses on agencies directly responsible for regulating environmental introductions: the Department of Agriculture (USDA), the Environmental Protection Agency (EPA), and the Food and Drug Administration (FDA). USDA, EPA, and FDA have limited experience with genetically engineered organisms used in the environment and are uncertain about their effects. Each agency generally uses a detailed prerelease evaluation process that draws upon a broad range of scientific expertise to review proposals for field tests on a case by case basis. The agencies have made efforts to coordinate their policies and review procedures. USDA has issued a new rule and EPA is considering amending regulations to cover the range of products under their jurisdictions more completely. Even so, some organisms are not subject to regulation due to differences in legislative mandates and risk management policies. Although genetically engineered microorganisms cannot be completely contained at the field test site, a variety of control methods are available to limit their dispersal and impact. These include setting physical barriers at the test site and selecting organisms with vulnerable biological features.

Genetically engineered (GE) crops were first introduced commercially in the 1990s. After two decades of production, some groups and individuals remain critical of the technology based on their concerns about possible adverse effects on human health, the environment, and ethical considerations. At the same time, others are concerned that the technology is not reaching its potential to improve human

health and the environment because of stringent regulations and reduced public funding to develop products offering more benefits to society While the debate about these and other questions related to the genetic engineering techniques of the first 20 years goes on emerging genetic engineering technologies are adding new complexities to the conversation Genetically Engineered Crops builds on previous related Academies reports published between 1987 and 2010 by undertaking a retrospective examination of the purported positive and adverse effects of GE crops and to anticipate what emerging genetic engineering technologies hold for the future This report indicates where there are uncertainties about the economic agronomic health safety or other impacts of GE crops and food and makes recommendations to fill gaps in safety assessments increase regulatory clarity and improve innovations in and access to GE technology **Molecular Biotechnology** Mr. Rohit Manglik,2024-01-22 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels A New Technological Era for American Agriculture United States.
