Hannant, 1978 **Fiber-Reinforced Cements and Concretes** Colin D Johnston, 2014-04-21 This book summarizes and simplifies the results of a considerable body of research and practical experience with a wide range of fiber reinforced cementitious composites *Fibre Reinforced Cement and Concretes* R.N. Swamy, B. Barr, 2002-11-01 This volume consists of papers presented at the International Conference on Recent Developments in Fibre Reinforced Cements and Concretes held at the School of Engineering University of Wales College of Cardiff UK 18 20 September 1989 **Natural Fibre Reinforced Cement and Concrete** R. N. Swamy, 1988 *Fibre Reinforced Cement and Concretes* R.N. Swamy, B. Fibre Reinforced Cementitious Composites Arnon Bentur, Sidney Mindess, 2006-11-16 Advanced cementitious composites can be designed to have outstanding combinations of strength five to ten times that of conventional concrete and energy absorption capacity up to 1000 times that of plain concrete This second edition brings together in one volume the latest research developments in this rapidly expanding area The book is split Fibre Reinforced Concrete FIB - International Federation for Structural Concrete, 2022-11-01 Fibre Reinforced Concrete FRC is a composite material characterized by an enhanced post cracking tensile residual strength due to the capacity of fibres to bridge the crack faces by means of pull out mechanism Due to a better knowledge of FRC and the recent developments worldwide of guidelines for structural design the fib Special Activity Group 5 who prepared the new fib Model Code decided to introduce some sections on new materials and in particular on FRC structural design At that time working Groups TG 8 3 Fibre reinforced concrete and TG 8 6 Ultra high performance fibre reinforced concrete of fib prepared these sections of the new fib Model Code concerning FRC design rules for providing a guidance to engineers to properly and safely design FRC structural elements both at serviceability and at ultimate limit states based on the state of the art knowledge This bulletin was written with the aim to share the main framework used by the two groups to introduce these two sections and to describe the many aspects already known but not yet introduced in the Model Code Even though the basic principles introduced in the two sections are mainly obtained from research on steel fibre reinforced concrete the Model Code is open to every type of fibres following a performance based design approach The bulletin represents a wide effort made by the people of the Task Group 4 1 and 4 2 to trace the knowledge on FRC and aims to be helpful for structural designers when using this new material in the practice

Bartos, 2013-10-22 Fresh concrete is generally featured in publications on concrete technology where the focus is often on fundamental rheology or diverse research methods or the standards describe the tests but do not provide practical advice on interpretation of the results This book aims to fill the gap between highly scientific and fundamental works and the many fragmented test specifications It summarises the existing knowledge on the properties of fresh concrete in a form accessible to practicing engineers and concrete technologists It includes a manual of practical tests which cover both the standard tests in major countries and new tests specifically applicable to site testing The testing equipment required and the procedures are described in sufficient detail for the tests to be carried out with references to selected national standards when compliance with specific conditions applicable in those countries is required Particular attention is paid to properties of special fresh concrete mixes which are increasingly used in practical construction The work will be of interest to engineers and others involved in the research development design and execution of concrete construction including those working in EEC countries

Fiber-reinforced Cement Composites Perumalsamy N. Balaguru, Surendra P. Shah, 1992 Concrete Technology (Theory and Practice), 8e Shetty M.S. & Jain A.K., 2019 Concrete Technology Theory and Practice gives students of Civil Engineering a thorough understanding of all aspects of concrete technology from first principles It covers types of Cement Admixtures Concrete strength durability and testing with reference to national standards Cement-based Composites: Materials, Mechanical Properties and Performance A.M. Brandt, 2003-09-02 This book considers the properties and behaviour of cement based materials from the point of view of composite science and technology It deals particularly with newer forms of cement based materials and also with a composite approach to conventional materials and their special

properties Emphasis is put on non conventional reinforcement and design Production Methods and Workability of Concrete P.J.M. Bartos,D.J. Cleland,D.L. Marris,2004-06-02 Practical production of ordinary and special high performance concretes and their behaviour and properties when fresh are the main themes of this book It derives from the International RILEM Conference held in Paisley Scotland in June 1996 and represents the culmination of the work of two RILEM Technical Committees 145 WSM Workability of Specified Fibre Reinforced Cementitious Composites Routledge,1990-02-02 This text covers the fundamental scientific principles of fibres that have been modified to be compatible with cementitious matrices It also provides information and a description of the properties of specific systems prepared with different types of fibres such as steel glass asbestos polypropylene natural fibres and various types of high performance polymeric fibres It includes a reference list and sets of tables describing the engineering properties of the different systems and micrographs
