Proceedings of the Fourth International Conference on Durability of Building Materials and Components

Gyoujin Cho, 2013-10-02 Proceedings of the Fourth International Conference on Durability of Building Materials and Components Volume I contains the proceedings of the Fourth International Conference on Durability of Building Materials and Components held in Singapore on November 4-6, 1987. The conference provided a forum for reviewing advances that have been made with regards to the durability of building materials and components and tackled topics ranging from concrete materials and structures to fiber reinforced concrete, plastics, surface coatings and building codes and specifications. Comprised of 67 chapters, this volume first summarizes the technical barriers to service life prediction and outlines research directions for overcoming such barriers. The discussion then turns to the deterioration of slate tiles containing iron sulfides, prediction of durability of building sealants and the durability of building ceramics in agricultural environments. Subsequent chapters focus on the influence of seawater curing on the pore structure of flyash blended cement mortar, effect of cement composition on the durability of natural fibers in mortar, permeability control of concrete protective layers in products and theory and experimental evidence concerning maximum and minimum strength of composite materials. The applications of surface integral techniques to fracture analysis are also considered. This book will be of interest to practitioners and research workers in engineering.

InCIEC 2013 Rohana Hassan, Marina Yusoff, Zulhabri Ismail, Norliyati Mohd Amin, Mohd Arshad Fadzil, 2014-01-09 The special focus of this proceeding is to cover the areas of infrastructure engineering and sustainability management. The state of the art information in infrastructure and sustainable issues in engineering covers earthquake bioremediation, synergistic management, timber engineering, flood management and intelligent transport systems. It provides precise information with regards to innovative research development in construction materials and structures in addition to a compilation of interdisciplinary findings combining nano materials and engineering.

Concrete in the Service of Mankind Ravindra Dhir, Peter Hewlett, 2003-06-24 This fourth volume of Concrete in the Service of Mankind focuses on radical concrete technology. Concrete is ubiquitous and unique and is found in every developed and developing country. Indeed, there are no alternatives to concrete as a volume construction material for infrastructure. This raises important questions of how concrete should be designed and constructed for cost effective use in the short and long term and to encourage further radical development. Equally, it must be environmentally friendly during manufacture in an aesthetic presentation in structures and in the containment of harmful materials. This book should be of interest to concrete technologists, contractors, civil engineers, consultants, government agencies, research organizations.

Textile Reinforced Concrete Alva Peled, Arnon Bentur, Barzin Mobasher, 2017-08-07 Textile reinforced concrete (TRC) has emerged in recent years as an attractive new high performance cement based composite. Textiles can significantly improve the mechanical behavior of cement matrices under static and dynamic conditions and give superior tensile strength, toughness, ductility, energy absorption and protection against environmental degrading influences. Flexibility with fabric production methods enables the

control of fabric and yarn geometry This along with the ability to incorporate into the fabric a range of yarns of different types and performances as well as cement matrix modifications enables design of the composite to a wide range of needs The book is intended to provide a comprehensive treatment of TRC covering the basic fundamentals of the composite material itself and the principles governing its performance on a macro scale as a component in a structure It provides in depth treatment of the fabric methods for production of the composite the micro mechanics with special attention to the role of bonding and microstructure behavior under static and dynamic loading sustainability design and the applications of TRC composites
