Revolutions and Continuity in Greek Mathematics Michalis Sialaros,2018-04-23 This volume brings together a number of leading scholars working in the field of ancient Greek mathematics to present their latest research In their respective area of specialization all contributors offer stimulating approaches to questions of historical and historiographical revolutions and continuity Taken together they provide a powerful lens for evaluating the applicability of Thomas Kuhn's ideas on scientific revolutions to the discipline of ancient Greek mathematics Besides the latest historiographical studies on geometrical algebra and premodern algebra the reader will find here some papers which offer new insights into the controversial relationship between Greek and pre Hellenic mathematical practices Some other contributions place emphasis on the other edge of the historical spectrum by exploring historical lines of continuity between ancient Greek Byzantine and post Hellenic mathematics The terminology employed by Greek mathematicians along with various non textual and material elements is another topic which some of the essays in the volume explore Finally the last three articles focus on a traditionally rich source on ancient Greek mathematics namely the works of Plato and Aristotle

Research in Mathematics Education in Australasia 2004 - 2007 ,2008-01-01 Every four years beginning in 1984 the

Mathematics Education Research Group of Australasia MERGA produces a review of Australasian research in mathematics education The authors of the chapters in this volume have summarised and critiqued research conducted during the period 2004 2007 The research foci for the period are reflected in the chapter titles Working under tight funding opportunities and the shadow of demanding research accountability measures the research undertaken has nonetheless been rigorous far ranging and at the cutting edge In bringing this regular review of the best of Australasian mathematics education to a broader international audience for the first time readers will recognise the outstanding contributions made by Australasian mathematics education researchers and the potential their findings have to inform and direct future directions in the field

Gazette - Australian Mathematical Society Australian Mathematical Society,1987 Making Presentation Math Computable André Greiner-Petter,2022-12-31 This Open Access book addresses the issue of translating mathematical expressions from LaTeX to the syntax of Computer Algebra Systems CAS Over the past decades especially in the domain of Sciences Technology Engineering and Mathematics STEM LaTeX has become the de facto standard to typeset mathematical formulae in publications Since scientists are generally required to publish their work LaTeX has become an integral part of today s publishing workflow On the other hand modern research increasingly relies on CAS to simplify manipulate compute and visualize mathematics However existing LaTeX import functions in CAS are limited to simple arithmetic expressions and are therefore insufficient for most use cases Consequently the workflow of experimenting and publishing in the Sciences often includes time consuming and error prone manual conversions between presentational LaTeX and computational CAS formats To address the lack of a reliable and comprehensive translation tool between LaTeX and CAS this thesis makes the following three contributions First it provides an approach to semantically enhance LaTeX expressions with sufficient semantic information for translations into CAS syntaxes Second it demonstrates the first context aware LaTeX to CAS translation framework LaCAST Third the thesis provides a novel approach to evaluate the performance for LaTeX to CAS translations on large scaled datasets with an automatic verification of equations in digital mathematical libraries This is an open access book Proceedings of the Fifth International Scientific Conference “Intelligent Information Technologies for Industry” (IITI’21) Sergey Kovalev,Valery Tarassov,Vaclav Snasel,Andrey Sukhanov,2021-09-15 This book presents key advances in intelligent information technologies for industry This book of Lecture Notes in Networks and Systems contains the papers presented in the main track of IITI 2021 the Fifth International Scientific Conference on Intelligent Information Technologies for Industry held on September 30 October 4 2021 in Sirius Russia The conference was jointly co organized by Rostov State Transport University Russia and V B Technical University of Ostrava Czech Republic with the participation of Russian Association for Artificial Intelligence RAAI and Sirius University Russia IITI 2021 was devoted to practical models and industrial applications related to intelligent information systems It was considered as a meeting point for researchers and practitioners to enable the implementation of advanced information technologies into various industries Nevertheless

some theoretical talks concerning the state of the art in intelligent systems and soft computing were also included into proceedings There were 180 paper submissions from 14 countries Each submission was reviewed by at least three chairs or PC members We accepted 69 regular papers 38 % Unfortunately due to limitations of conference topics and edited volumes the Program Committee was forced to reject some interesting papers which did not satisfy these topics or publisher requirements We would like to thank all authors and reviewers for their work and valuable contributions The friendly and welcoming attitude of conference supporters and contributors made this event a success

Learn from the Masters! Frank Swetz, 1995 This book is for high school and college teachers who want to know how they can use the history of mathematics as a pedagogical tool to help their students construct their own knowledge of mathematics Often a historical development of a particular topic is the best way to present a mathematical topic but teachers may not have the time to do the research needed to present the material This book provides its readers with historical ideas and insights which can be immediately applied in the classroom The book is divided into two sections the first on the use of history in high school mathematics and the second on its use in university mathematics The articles are diverse covering fields such as trigonometry mathematical modeling calculus linear algebra vector analysis and celestial mechanics Also included are articles of a somewhat philosophical nature which give general ideas on why history should be used in teaching and how it can be used in various special kinds of courses Each article contains a bibliography to guide the reader to further reading on the subject

Rods, Sets and Arrows Dirk De Bock, Geert Vanpaemel, 2019-12-10 For anyone interested in the history and effects of the introduction of so called Modern Mathematics or Math matique Moderne or New Mathematics etc this book by Dirk De Bock and Geert Vanpaemel is essential reading The two authors are experienced and highly qualified Belgian scholars and the book looks carefully at events relating to school mathematics for the period from the end of World War II to 2010 Initially the book focuses on events which helped to define the modern mathematics revolution in Belgium before and during the 1960s The book does much more than that however for it traces the influence of these events on national and international debates during the early phases of the reform By providing readers with translations into English of relevant sections of key Continental documents outlining the major ideas of leading Continental scholars who contributed to the Math matique Moderne movement this book makes available to a wide readership the theoretical social and political backdrops of Continental new mathematics reforms In particular the book focuses on the contributions made by Belgians such as Paul Libois Willy Servais Fr d rique Lenger and Georges Papy The influence of modern mathematics fell away rapidly in the 1970s however and the authors trace the rise and fall from that time into the 21st century of a number of other approaches to school mathematics in Belgium in other Western European nations and in North America In summary this is an outstanding

landmark publication displaying the fruits of deep scholarship and careful research based on extensive analyses of primary sources

Mathematical Foundations of Computer Science 2002 Krzysztof Diks, Wojciech Rytter, 2007-10-23 This book constitutes the refereed proceedings of the 27th International Symposium on Mathematical Foundations of Computer Science MFCS 2002 held in Warsaw Poland in August 2002 The 48 revised full papers presented together with 5 invited papers were carefully reviewed and selected from 108 submissions All relevant aspects of theoretical computer science are addressed ranging from discrete mathematics combinatorial optimization graph theory algorithms and complexity to programming theory formal methods and mathematical logic
