Global Environmental Politics Jean-Frédéric Morin, Amandine Orsini, Sikina Jinnah, 2020 *Global Environmental Politics* provides a fully up to date and comprehensive introduction to the most important issues dominating this fast moving field. Going beyond the issue of climate change the textbook also introduces students to the pressing issues of desertification, trade in hazardous waste, biodiversity protection, whaling, acid rain, ozone depletion, water consumption and over fishing. Importantly the authors pay particular attention to the interactions between environmental politics and other governance issues such as gender, trade, development, health, agriculture and security. Handbook of Global Environmental Politics Peter Dauvergne, 2012-01-01 The second edition of this Handbook contains more than 30 new and original articles as well six essential updates by leading scholars of global environmental politics. This landmark book maps the latest theoretical and empirical research in this energetic and growing field. Captured here are the pioneering and lively debates over concerns for the health of the planet and how they might best be addressed. The introduction explores the intellectual trends and evolving parameters in the field of global environmental politics. It makes a case for an expansive definition of the field, one that embraces an interdisciplinary literature on the connections between global politics and environmental change. The remaining chapters are divided into four broad themes: states and cooperation, global governance, the political economy of governance and knowledge and ethics, with each section covering key emerging issues. In depth explorations are given to topics such as climate change, multinational corporations, international agreements and UN organizations, regulations and business standards, trade and international finance, multilevel and transnational governance and ecological citizenship. *Handbook of Global Environmental Politics* Second Edition is a comprehensive review of the field and offers cutting edge ideas for further research. As such scholars, students and policymakers will find themselves looking to it for many years to come. *Global Environmental Politics* Johannes Urpelainen, 2022-07-29 Emerging economies have fundamentally transformed global environmental politics. Led by China and India they increasingly make or break international negotiations which now require agreement among a large number of governments with widely varied preferences. Emerging economies which still suffer from widespread poverty and frequently struggle with policy implementation often feel that Western led initiatives neglect their needs. What does the global environmental policy landscape look like in the age of a rising Global South? This book explains why emerging economies have come to dominate global environmental politics and examines the implications for future international cooperation. Johannes Urpelainen shows that emerging economies continue to prioritize economic growth and often have limited institutional capacity to contain the environmental destruction that it causes. However he argues despite barriers to cooperation innovative bargaining and institutional design offer a way forward. Bottom up agreements that respect national sovereignty and invest in capacity building hold more promise than traditional top down treaties with binding commitments. The book features detailed discussions of attempts to address hazardous chemicals, loss of biodiversity,

and climate change a comparative analysis of China and India and case studies of nine other emerging economies around the world Global Environmental Politics is an essential forward looking overview of today s most pressing international issue

Deliberating Environmental Policy in India Sunayana Ganguly, 2015-11-06 As one of the world's largest and most bio diverse countries India's approach to environmental policy will be very significant in tackling global environmental challenges This book explores the transformations that have taken place in the making of environmental policy in India since the economic liberalization of the 1990s It investigates if there has been a slow shift from top down planning to increasingly bottom up and participatory policy processes examining the successes and failures of recent environmental policies Linking deliberation to collective action this book contends that it is crucial to involve local actors in framing the policies that decide on their rights and control over bio resources in order to achieve the goal of sustainable human development The first examples of large scale participatory processes in Indian environmental policy were the 1999 National Biodiversity Strategy Action Plan and the 2006 Scheduled Tribes and Other Traditional Forest Dwellers Act This book explores these landmark policies exploring the strategies of advocacy and deliberation that led to both the successes and failures of recent initiatives It concludes that in order to deliberate with the state civil society actors must engage in forms of strategic advocacy with the power to push agendas that challenge mainstream development discourses The lessons learnt from the Indian experience will not only have immediate significance for the future of policy making in India but they will also be of interest for other countries faced with the challenges of integrating livelihood and sustainability concerns into the governance process
