Global Methods In Optimal Control Theory:

Global Methods in Optimal Control Theory Vadim Krotov, 1995-10-13 This work describes all basic equations and inequalities that form the necessary and sufficient optimality conditions of variational calculus and the theory of optimal control. Subjects addressed include developments in the investigation of optimality conditions, new classes of solutions, analytical and computational methods and applications. *Stability by Liapunov's Matrix Function Method with Applications* A.A. Martynyuk, 1998-08-03 Provides a systematic study of matrix Liapunov functions incorporating new techniques for the qualitative analysis of nonlinear systems encountered in a wide variety of real world situations. Methods of Fourier Analysis and Approximation Theory Michael Ruzhansky, Sergey Tikhonov, 2016-03-11 Different facets of interplay between harmonic analysis and approximation theory are covered in this volume. The topics included are Fourier analysis, function spaces, optimization theory, partial differential equations, and their links to modern developments in the approximation theory. The articles of this collection were originated from two events. The first event took place during the 9th ISAAC Congress in Krakow, Poland, 5th-9th August 2013, at the section Approximation Theory and Fourier Analysis. The second event was the conference on Fourier Analysis and Approximation Theory in the Centre de Recerca Matemàtica CRM Barcelona during 4th-8th November 2013, organized by the editors of this volume. All articles selected to be part of this collection were carefully reviewed.

Cogalois Theory Toma Albu, 2002-10-16 This volume offers a systematic comprehensive investigation of field extensions, finite or not, that possess a Cogalois correspondence. The subject is somewhat dual to the very classical Galois Theory dealing with field extensions possessing a Galois correspondence. Solidly backed by over 250 exercises and an extensive bibliography, this book presents a compact and complete review of basic field theory, considers the Vahlen-Capelli Criterion, investigates the radical Kneser strongly Kneser Cogalois and G-Cogalois extensions, discusses field extensions that are simultaneously Galois and G-Cogalois, and presents nice applications to elementary field arithmetic.

Optimal Design of Control Systems Gennadii E. Kolosov, 2020-08-27 Covers design methods for optimal or quasioptimal control algorithms in the form of synthesis for deterministic and stochastic dynamical systems with applications in aerospace, robotic, and servomechanical technologies. Providing new results on exact and approximate solutions of optimal control problems.

Foundations of Translation Planes Mauro Biliotti, Vikram Jha, Norman Johnson, 2001-07-13 An exploration of the construction and analysis of translation planes to spreads, partial spreads, coordinate structures, automorphisms, autotopisms, and collineation groups. It emphasizes the manipulation of incidence structures by various coordinate systems, including quasispreads and matrix spreads. The volume showcases methods of structure theory as well as tools and techniques for the construction of new planes.
