Multiple Voices in Academic and Professional Discourse Sergio Maruenda Bataller,2011-05-25 The demands of

today's society for greater specialization have brought about a profound transformation in the humanities which are not immune to the competitive pressure to meet new challenges that are present in other sectors. Thus, lecturers and researchers in modern languages and applied linguistics departments have made great efforts to design syllabi and materials more attuned to the competences and requirements of potential working environments. At the same time, linguists have attempted to apply their expertise in wider areas, creating research institutes that focus on applying language and linguistics in different contexts and offering linguistic services to society as a whole. This book attempts to provide a global view of the multiple voices involved in interdisciplinary research and innovative proposals in teaching specialized languages while offering contributions that attempt to fill the demands of a varied scope of disciplines such as the sciences, professions or educational settings. The chapters in this book are made up of current research on these themes: discourse analysis in academic and professional genres, specialized translation, lexicology and terminology, and ICT research and teaching of specialized languages.

Terminology Management for Translators María Fernández-Parra, 2025-08-08 Professional translators are the crucial link between businesses and their success in international markets. The content they convey across languages very often includes specialised terminology. But how much exactly should translators know about terminology and its management and how should they deal with it? Can translators write like experts without being experts? What tools and technologies can assist translators in the management of terminology? This book provides the results of new research in this area in order to address these questions in detail. For professionals, this book provides a fresh view on practices in terminology management based on empirical data. For translator trainers, it provides a thorough overview of the aspects of terminological theories that are useful for translators, shows how the theory can underpin the design and creation of terminological databases for translators, and offers a wide range of ideas for discussion exercises and examples. For students and trainee translators, it explains why they should bother with terminology management at all and offers guidance on acquiring, storing and using their terminological resources efficiently, dispelling common misconceptions about terms and terminological work. With clear explanations and summaries, activities, discussion points, further reading and links to resources, this book is the ultimate introductory text and reference resource covering everything translators ever wanted to know about the terminological side of their work.

Theory and Practice of Specialised Online Dictionaries Pedro A. Fuertes-Olivera, Sven Tarp, 2014-06-18 This book is the first comprehensive monograph on the Function Theory of Lexicography, which originated at the Aarhus School of Business, Aarhus University. Function Theory considers dictionaries to be tools that are constructed for assisting specific users with punctual needs in specific usage situations, e.g. communicative oriented situations and cognitive oriented situations. The book's main focus is on defending the independent academic status of lexicography and its corollary. The process of designing, compiling and updating specialised online dictionaries needs a theoretical framework that addresses general and specific aspects. The former are common to all types of information tools; the latter are mainly dependent on the

media for which the information tool is constructed and their specific target users This books offers both aspects and moves from the highest level of abstraction to very detailed aspects of lexicographic work e g how to convert an originally conceived polyfunctional online dictionary into several monofunctional usage based ones The book illustrates that the theory and the methodology currently used by advocates of the Function Theory of Lexicography offers better results than other approaches and therefore makes its case for proposing the Function Theory for terminological terminographical work **Applied**
