## **Global Environmental Change:**

*Global Environmental Change and Human Security* Richard A. Matthew, Jon Barnett, Bryan McDonald, Karen L. O'Brien, 2009-10-09 Experts discuss the risks global environmental change poses for the human security including disaster and disease violence and increasing inequity In recent years scholars in international relations and other fields have begun to conceive of security more broadly moving away from a state centered concept of national security toward the idea of human security which emphasizes the individual and human well being Viewing global environmental change through the lens of human security connects such problems as melting ice caps and carbon emissions to poverty vulnerability equity and conflict This book examines the complex social health and economic consequences of environmental change across the globe In chapters that are both academically rigorous and policy relevant the book discusses the connections of global environmental change to urban poverty natural disasters with a case study of Hurricane Katrina violent conflict with a study of the decade long Nepalese civil war population gender and development The book makes clear the inadequacy of traditional understandings of security and shows how global environmental change is raising new unavoidable questions of human insecurity conflict cooperation and sustainable development Contributors W Neil Adger Jennifer Bailey Jon Barnett Victoria Basolo Hans Georg Bohle Mike Brklacich May Chazan Chris Cocklin Geoffrey D Dabelko Indra de Soysa Heather Goldsworthy Betsy Hartmann Robin M Leichenko Laura Little Alexander Lopez Richard A Matthew Bryan McDonald Eric Neumayer Kwasi Nsiah Gyabaah Karen L O'Brien Marvin S Soroos Bishnu Raj Upreti Global Environmental Change Antoinette Mannion, 2014-09-19 Now in its second edition This text has been extensively revised and rewritten to reflect the growth in environmental research during the last decade Human induced environmental change is occurring at such a rapid rate that inevitably the fundamental processes involved in biogeochemical cycling are being altered Global Environmental Change considers alterations to the biogeochemical cycles of carbon nitrogen sulphur and other elements as a result of industrial technological development and agriculture which have significantly altered the natural environment The book adopts a temporal and spatial approach to environmental change beginning with the natural environmental change of the Quaternary period and continuing with the culturally induced change since the inception of agriculture 10 000 years ago **A New Kind of Sharing** June D. Hall, Arthur J. Hanson, 1992 New Kind of Sharing **Global Environmental Change and Land Use** H.J.T.M. Haarman, Jan Verhagen, C.A. Rovers, 2003-06-30 The interaction between environmental change and human activities is complex requiring the concepts and tools of a number of disciplines for its effective analysis Land use and land cover change has only recently become a topic susceptible to scientific research as these concepts and tools have been developed and made available Rooted in a broad community concerned with global change systematic research has begun into land use systems at different scales and interactions and their links with global cycles of water nitrogen and carbon are being explored Partly based on research initiated by the Dutch National Research Programme on Global Air Pollution and

Climate Change NRP this book touches upon various land use and land cover issues in relation to global environmental change In addition to the biogeochemical cycles land as a carrier for functions of economic activities food and fibre production and energy production via biomass are discussed Crucial in studying land use is human behaviour and man environment interaction at different scales Land use and land cover change is an important contributor of greenhouse gases as these activities directly interfere with the carbon nitrogen and water cycles These cycles are connected through numerous feedback loops The interface of land use and climate is essentially determined by the interaction of man and the environment Man uses land primarily to produce food a relatively small area is needed for urban development

**Global Environmental Change** Robert W. Corell, Patricia A. Anderson, 1991-03-26 Understanding global environmental change and predicting the consequences of global environmental variability are becoming increasingly important to the nations of the world Global change is now on the agenda of world leaders a substantial number of whom are deeply concerned with the potential economic social and political consequences of human induced variabilities in the climate system and other aspects of global environmental change Uncertainty of scientific knowledge of global and regional processes and the limited ability of science to predict the behavior of the Earth system are of major concern These realities place upon the international scientific community a responsibility to expand scientific knowledge and predictive capabilities about the fundamental processes that control the Earth system The response of the scientific community has been phenomenal National and international planning and coordination mechanisms have been established to address the fundamental scientific questions of global environmental change e g the International Geosphere Biosphere Programme the World Climate Research Programme and the U S Global Change Research Program and other such national programs This NATO Workshop entitled The Science of Global Environmental Change focused on the state of knowledge in global change science and on assisting the Scientific Affairs Division of NATO in designing a 5 year program of Advanced Research Workshops ARWs and Advanced Study Institutes ASIs in the area of global change that would make a meaningful contribution to the international activities already underway

**Human Dimensions of Global Environmental Change** National Research Council, Division of Behavioral and Social Sciences and Education, Policy Division, Board on Environmental Change and Society, Committee on the Human Dimensions of Global Change and Committee on Global Change Research, 1999-08-29 This publication is extracted from a much larger report Global Environmental Change Research Pathways for the Next Decade which addresses the full range of the scientific issues concerning global environmental change and offers guidance to the scientific effort on these issues in the United States This volume consists of Chapter 7 of that report Human Dimensions of Global Environmental Change which was written for the report by the Committee on the Human Dimensions of Global Change of the National Research Council NRC It provides findings and conclusions on the key scientific questions in human dimensions research the lessons that have been learned over the past decade and the research imperatives for global change research funded from the United States

**Global Environmental Change** R E Hester, R M Harrison, 2007-10-31 Few people today are unaware of the far reaching effects of global environmental change and it is now generally accepted that human activities are the root cause of the changes in climate Global Environmental Change provides a balanced overview of the problems associated with global warming Commencing with a chapter on the evidence for global warming presented by Sir John Houghton the book then goes on to discuss the many problems associated with air pollution Subsequent chapters cover rising sea levels the effect of climate change on human health and the role of environmental performance in industry This readable and factually detailed book will have wide appeal but will be of particular interest to environmental scientists industrial managers policy makers and students *Encyclopedia of Global Warming and Climate Change, Second Edition* S. George Philander, 2012-06-13 The First Edition of the Encyclopedia of Global Warming and Climate Change provided a multi authored academic yet non technical resource for students and teachers to understand the importance of global warming to appreciate the effects of human activity and greenhouse gases around the world and to learn the history of climate change and the research enterprise examining it This edition was well received with notable reviews Since its publication the debate over the advent of global warming at least partially brought on by human enterprise has continued to ebb and flow depending literally on the weather politics and media coverage of climate summits and debates Advances in research also change the discourse as new data is collected and new scientific projects continue to explore and explain global warming and climate change Thus a new Second Edition updates more than half of the original entries and adds new perspectives and content to keep students and researchers up to date in a field that has proven provocatively lively Planetary Overload Anthony J. McMichael, 1995 The human species faces a new threat to its health perhaps to its survival Our burgeoning numbers the spread of technology and our conspicuous consumption are overloading Earth s capacity to replenish and repair itself Taking a unique perspective Planetary Overload forcefully points out the consequences to human health of ongoing degradation of Earth s ecosystems In a broad based accessible analysis A J McMichael examines current ecological disruptions land degradation ozone depletion temperature increases and loss of genetic diversity through the extinction of species among others and compellingly demonstrates their potentially disastrous results including food shortages new and intensified disease patterns rising seas mass refugee problems and cancers blindness and immune suppression from increased ultraviolet radiation While other books on the subject analyse only the environmental impact of these problems McMichael takes his analysis to an entirely new and disturbing extreme he relates each of these insidious processes back to its ultimate impact on human health He thoroughly considers these problems and their scientific uncertainties within a broad evolutionary biological social and economic context He also explores the underlying problems contributing to environmental breakdown especially the relations between the world s rich and poor This eloquent and alarming book will be of intense interest to environmentalists public health professionals policy makers environmental studies and human ecology scholars and anyone wishing a lucid rational

assessment of today's pressing ecological concerns      **Global Environmental Change** Robert W. Corell, Patricia A. Anderson, 2012-08-14 Understanding global environmental change and predicting the consequences of global environmental variability are becoming increasingly important to the nations of the world. Global change is now on the agenda of world leaders, a substantial number of whom are deeply concerned with the potential economic, social, and political consequences of human-induced variabilities in the climate system and other aspects of global environmental change. Uncertainty of scientific knowledge of global and regional processes and the limited ability of science to predict the behavior of the Earth system are of major concern. These realities place upon the international scientific community a responsibility to expand scientific knowledge and predictive capabilities about the fundamental processes that control the Earth system. The response of the scientific community has been phenomenal. National and international planning and coordination mechanisms have been established to address the fundamental scientific questions of global environmental change, e.g., the International Geosphere-Biosphere Programme, the World Climate Research Programme, and the U.S. Global Change Research Program and other such national programs. This NATO Workshop, entitled *The Science of Global Environmental Change*, focused on the state of knowledge in global change science and on assisting the Scientific Affairs Division of NATO in designing a 5-year program of Advanced Research Workshops (ARWs) and Advanced Study Institutes (ASIs) in the area of global change that would make a meaningful contribution to the international activities already underway.      *The Daily Globe* Joe Smith, 2000 Some of the greatest challenges facing humanity, such as climate change and biodiversity loss, have enormous implications for economic, social, and environmental security. Yet the significance of these issues is not reflected in media reporting.      *Hydrology and Global Environmental Change* Nigel W. Arnell, 2014-10-13 *Hydrology and Global Environmental Change* presents the hydrological contribution to, and consequences of, global environmental change. Assuming little or no prior knowledge on the part of the reader, the book looks at the main processes of global environmental change: global-scale processes, large regional processes, repetitive processes, and how the hydrological cycle processes and regimes impact on GEC and vice versa.

**Global Environmental Change Research** United States. Congress. Senate. Committee on Commerce, Science, and Transportation. Subcommittee on Science, Technology, and Space, 1987      [Encyclopedia of Global Environmental Change](#), 2001      **Facing Global Environmental Change** Hans Günter Brauch, Navnita Chadha Behera, Patricia Kameri-Mbote, John Grin, Ursula Oswald Spring, Béchir Chourou, Czesław Mesjasz, Heinz Krummenacher, 2009-06-04 The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally. Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth Assessment Report (AR4) of the Intergovernmental Panel on Climate Change (IPCC), which were disseminated on a large scale and reported extensively by the media. This was the result not only of a heightened interest on the part of the public on various aspects of climate change but also because the IPCC itself proactively attempted to spread the findings of its AR4 to

the public at large The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US Al Gore By taking this decision in favour of a leader who has done a great deal to create awareness on climate change and a body that assesses all scientific aspects of climate change and disseminates the result of its findings the Norwegian Nobel Committee has clearly drawn the link between climate change and peace in the world

**Tourism and Global Environmental Change** Stefan Gössling, Michael C. Hall, 2006-06-07 This fascinating book is the first comprehensive analysis of the economic social and political interrelationships between tourism and global environmental change one of the most significant issues facing humankind today Its contributors argue that the impacts of these changes are potentially extremely serious both for the tourism industry and for the communities dependent upon it Integrating knowledge from the social and physical sciences this significant book explores the key issues surrounding global environmental change as well as government and industry willingness to meet the challenges posed by it Divided into four main sections it investigates the tourism and global environmental change relationship in specific environments global issues related to environmental change differing perceptions of global environmental change held by tourists and the tourist industry Comprehensive in scope topical and integrative this key text is essential reading for students scholars and researchers in all aspects of tourism geography and environmental studies

The Routledge Handbook of Urbanization and Global Environmental Change Karen Seto, William Solecki, Corrie Griffith, 2015-12-22 This volume provides a comprehensive overview of the interactions and feedbacks between urbanization and global environmental change A key focus is the examination of how urbanization influences global environmental change and how global environmental change in turn influences urbanization processes It has four thematic foci Theme 1 addresses the pathways through which urbanization drives global environmental change Theme 2 addresses the pathways through which global environmental change affects the urban system Theme 3 addresses the interactions and responses within the urban system in response to global environmental change Theme 4 centers on critical emerging research

*Human Dimensions of Global Environmental Change* National Research Council, Division of Behavioral and Social Sciences and Education, Policy Division, Board on Environmental Change and Society, Committee on the Human Dimensions of Global Change and Committee on Global Change Research, 1999-07-29 This publication is extracted from a much larger report Global Environmental Change Research Pathways for the Next Decade which addresses the full range of the scientific issues concerning global environmental change and offers guidance to the scientific effort on these issues in the United States This volume consists of Chapter 7 of that report Human Dimensions of Global Environmental Change which was written for the report by the Committee on the Human Dimensions of Global Change of the National Research Council NRC It provides findings and conclusions on the key scientific questions in human dimensions research the lessons that have been learned over the past decade and the research imperatives for global change research funded from the United States

*Assessing*

*Vulnerability to Global Environmental Change* Richard J. T. Klein, Anthony G. Patt, 2012-05-16 Assessing the vulnerability of human populations to global environmental change particularly climate change is now the main imperative of research and international action. However, much of the research into vulnerability is not designed to feed directly into decision making and policy, creating a gap between the knowledge created by researchers and what is required by decision makers. This book seeks to rectify this problem and bridge the gap. It discusses vulnerability as the central theme and brings together many different applications from disaster studies, climate change impact studies and several other fields, and provides the most comprehensive synthesis of definitions, theories, formalization and applications to date, illustrated with examples from different disciplines, regions and periods, and from local through to regional, national and international levels. Case study topics cover sea level rise, vulnerability to changes in ecosystem services, assessing the vulnerability of human health and double exposure to climate change and trade liberalization amongst other issues. Research outcomes stress that science policy dialogues must be transparent to be effective and concentrate on a mutual understanding of the concepts used. A key research finding is that the most useful information for decision makers is that which shows the separate causes and drivers of vulnerability rather than presenting vulnerability in an aggregated form. The book concludes with a unifying framework for analysing integrated methodologies of vulnerability assessment and guiding how research and policy can be linked to reduce vulnerability.

*Global Environmental Change and International Law* Lynne M. Jurgielewicz, 1996 This is one of the few books dealing with regime theory to be written from a legal point of view. Jurgielewicz's book is part of an effort to promote interdisciplinary research on the nature of the international legal order. Her work explores the concept of international regimes within the international legal order, utilizing the policy oriented approach to international law. The study uses examples of global environmental change as models. By examining the general international law applicable to climate change and ozone layer depletion, the author attempts to explain the original need for regime formation in these areas. Next, Jurgielewicz looks at the role of regimes within international law, focusing on their formation, maintenance, source of legal obligation and compliance mechanisms. The book concludes that regimes are present within the international legal order and play a vital role in maintaining that order. This book will appeal to students in law schools, graduate schools or advanced undergraduate seminars covering international relations, international legal theory, international law and international organizations.
