Globalization Of Multinational Enterprise Activity And Economic Development:

The Globalization of Multinational Enterprise Activity and Economic Development N. Hood, S. Young, 1999-10-21 This book explores and analyzes the effects of the globalization strategies of multinational enterprises MNEs on national and local development and highlights the implications of these effects for policy makers Containing contributions from leading international business scholars the text addresses this previously little explored but critically important issue for the future of the world economy

The Globalization of Multinational Enterprise Activity and Economic Development Neil Hood, 1999 This book explores and analyzes the effects of the globalization strategies of multinational enterprises MNEs on national and local development and highlights the implications of these effects for policy makers Containing contributions from leading international business scholars the text addresses this previously little explored but critically important issue for the future of the world economy

Multinationals and Economic Geography Simona Iammarino, Philip McCann, 2013-01-01 The world economy is subject to a rapidly increasing globalization and multinational enterprises are their major driving force This brand new book on multinationals and economic geography by two world leading economic geographers is a landmark that provides an integrated and dynamic perspective on the economic geography of the multinational enterprise To fully understand this process of globalization the book explains forcefully and persuasively that one needs a dynamic perspective on multinational enterprises that brings together disparate literatures on economic geography knowledge and innovation global network cities and international business and management Embedding it in modern theory of innovation and geography the book provides not only a state of the art of theories and empirics on the location of multinationals but goes far beyond that This book is an absolute must read for any scholar and any student that is interested in multinationals and their location Ron Boschma Utrecht University The Netherlands and Lund University Sweden Despite often playing second fiddle to clusters in the economic geography literature multinationals are fundamental drivers of economic development As generators and diffusers of knowledge they have played an essential role in shaping the new world economic order No book captures this better than Simona Iammarino and Philip McCann's *Multinationals and Economic Geography* a must read for anyone eager to fully understand the new economic geography of globalisation Andr s Rodr guez Pose London School of Economics UK After more than fifty years of systematic research on multinational enterprises MNEs what is apparent is that there is as yet no unified or dominant theory of the MNE The objective of this book is to bring into focus one particular dimension of MNE behaviour and activity that has been relatively under researched namely the geography of the multinational enterprise as understood through the lens of innovation and technological change The authors clearly demonstrate that geography is becoming increasingly important for MNEs and in turn MNEs are becoming progressively more important for economic geography The pivot on which this vital relationship turns is the creation diffusion and management of new knowledge This unique book will prove a fascinating read for academics students and researchers across

a broad range of areas including geography economic geography regional science international business and management innovation studies economic development Professionals such as corporate managers and policymakers in these fields would also find this book to be of great interest

Regional and Global Multinationals Christoph Czychon, 2021-06-29 Based on their ability to facilitate interdependencies across the borders of national and regional markets multinationals enterprises MNEs act as the key drivers of world trade and investment activities While recent global challenges additionally highlight the need to explain and assess the status and progress of internationality regionality previous research renders the concept of firm level globalization as a special but not the general case Christoph Czychon dedicates specific attention to the research on regional and global MNEs based on an extensive and rigorous review of the existing academic literature as well as the analysis of 2005 2015 empirical data from the European context with a focus on CAC40 and DAX30 listed firms In doing so the author offers insights and results that stand in contrast to the original narrative of the debate and presents a comprehensive and updated perspective on regional and global MNEs

Multinationals, Clusters and Innovation A. Tavares, A. Teixeira, 2006-07-11 Countries adopt policies that attract foreign multinationals stimulate industrial clustering and foster innovation This book links these topical issues examining activities of multinational enterprises alongside the efficiency appropriateness and sufficiency of such policies With new empirical evidence it makes practical proposals throughout

The Limits of Convergence Mauro F. Guillén, 2010-07-01 This book challenges the widely accepted notion that globalization encourages economic convergence and by extension cultural homogenization across national borders A systematic comparison of organizational change in Argentina South Korea and Spain since 1950 finds that global competition forces countries to exploit their distinctive strengths resulting in unique development trajectories Analyzing the social political and economic conditions underpinning the rise of various organizational forms Guillén shows that business groups small enterprises and foreign multinationals play different economic roles depending on a country's path to development Business groups thrive when there is foreign trade and investment protectionism and are best suited to undertake large scale capital intensive activities such as automobile assembly and construction Their growth and diversification come at the expense of smaller firms and foreign multinationals In contrast small and medium enterprises are best fitted to compete in knowledge intensive activities such as component manufacturing and branded consumer goods They prosper in the absence of restrictions on export oriented multinationals The book ends on an optimistic note by presenting evidence that it is possible though not easy for countries to break through the glass ceiling separating poor from rich It concludes that globalization encourages economic diversity and that democracy is the form of government best suited to deal with globalization's contingencies Against those who contend that the transition to markets must come before the transition to ballots Guillén argues that democratization can and should precede economic modernization This is applied economic sociology at its best broad topical full of interesting political implications and critical of the conventional wisdom

Multinationals and Industrial Competitiveness John H. Dunning, Rajneesh Narula, 2005-01-01 This book provides an excellent overview of the changing relationship between multinationals and economic development as globalization has taken off and substantially altered the conditions for catching up as opposed to falling behind The authors move very effectively between the discussion of concepts that are crucial to understanding such changes and various empirical evidence on foreign direct investment trade inter firm relationships institutional settings and competitiveness John Cantwell Rutgers University US The globalisation of the world economy has undermined many of the old certainties regarding foreign direct investment flows Dunning and Narula use the concepts of alliance capitalism and technological evolution to analyse recent trends in international business They identify the challenges to government policymakers from regional integration and the consequent intensification of political competition to attract high technology investment This masterful and incisive analysis brings great clarity to perplexing issues and delineates a cogent industrial policy agenda for a globalised economy Mark Casson University of Reading UK This book offers an important contribution to the contemporary debate on the role of multinational enterprises MNEs in economic development in an increasingly globalizing knowledge intensive and alliance based world economy Each of the chapters touches upon critical issues now facing the global economy They also address the growing importance of innovative activities of firms in promoting economic development and industrial restructuring as well as the role of FDI and cooperative agreements in furthering this goal Emphasis is placed on the increasingly significant role of national governments in promoting the intellectual capital of their indigenous resources and capabilities and of inter firm collaborative alliances Globalization and technological advances are reconfiguring the ingredients of the competitiveness of firms and nation states They are emphasizing the increasingly important role of both private and social institutions as determinants of the success of corporations and of the economic development of societies Covering a range of issues from economic development alliance capitalism government policies regional integration and industrial development this authoritative book will greatly appeal to academics and economists especially those interested in international business and management
