## **Habitat Of Hydrocarbons On The Norwegian Continental Shelf:**

**Habitat of Hydrocarbons on the Norwegian Continental Shelf** Norsk petroleumssforening, 1986-12-31      **Habitat of Hydrocarbons on the Norwegian Continental Shelf** A.M. Spencer, 1986-12-31      *Correlation in Hydrocarbon Exploration* John Collinson, 2012-12-06 This book is the published record of the papers presented at a conference of the Norwegian Petroleum Society NPF held in Bergen Norway on 3-5 October 1988. The conference was initially proposed and promoted by the Geology and Geophysics Advisory Committee of the Norwegian Petroleum Society consisting of A.M. Spencer, Chairman, M. Brink, J.D. Collinson, S. Hanslien, D.M.D. James, T.B. Lund, K. Messel, E. Ormaasen and G. Saeland. The programme and more detailed planning of the conference was carried out by a programme committee consisting of J.D. Collinson, Chairman, O. Eldholm, E. Holter, D.M.D. James, H. Tykoezinski, D. Worsley and S.M. Aasheim. There were 245 participants at the meeting and 36 papers were presented as talks with a further 9 presented as posters. These proceedings are representative of the range of topics covered. The meeting was characterized by a high level of discussion which has influenced several authors in the final preparation of their written papers. These proceedings have been edited on behalf of the Norwegian Petroleum Society by J.D. Collinson with help from H. Tykoezinski. The editor and the organizing committee wish to thank all the referees who reviewed papers and all the authors who responded so fully and promptly to their comments. The NPF is most grateful to the University of Bergen for making available their facilities for the conference.      *Quantification and Prediction of Hydrocarbon Resources* A.G. Doré, R. Sinding-Larsen, 1996-12-17 The oil price shocks of the mid 1980s and their aftermath created radical changes in the petroleum industry and underlined the need for reliable information on petroleum resources. Integration between the disciplines of petroleum geology, exploration, geophysics, reservoir, petroleum engineering and economics became a necessity for resource management and strategic planning. This volume is designed to bring together some of the best techniques evolved to meet these challenges. The very broad scope of the volume, ranging from the macro global to micro field and prospect level, provides an overview of the thought processes currently prevalent in the industry and academia on the subject of resource quantification and prediction. This is one of the first books to cover the extensive assembly of hydrocarbon quantification and prediction techniques of value to petroleum industry management, geoscientists, engineers and economists. Containing hundreds of illustrations, some in colour, the book is arranged in 26 chapters with a detailed subject index. Many service companies and university departments with links to the industry will also find much to interest them.      Petroleum Exploration and Exploitation in Norway Norsk petroleumssforening. Conference, 1995 This conference was arranged by the Norwegian Petroleum Society in order to commemorate the first 25 years of exploration on the Norwegian Continental Shelf. Sixty papers and posters were presented of which 25 have been selected for this volume. Since the start of exploration activities during the mid 1960s the North Sea has not only proved to be one of the main petroleum provinces in the world but has also established itself as an excellent laboratory for geoscientific research and application. This

development has been stimulated greatly by the openness towards exchange of technical data encouragement by the Norwegian authorities The objective of this book is to assess the results of 25 years of exploration in Norway It focuses on lessons learned from past experiences as well as considering future challenges facing geoscientists in the industry relating to both exploration and exploitation activities Included are papers which assess the status and future trends of exploration in the main geological provinces on the Norwegian Continental Shelf from the Central Graben in the south to Svalbard and the Russian Arctic in the north

**Hydrocarbon Seal Quantification** A.G. Koestler, R. Hunsdale, 2002-04-29 This volume contains 17 selected papers reflecting the flavour of the Norwegian Petroleum Society conference on hydrocarbon seals quantification and showing the recent significant advances in the understanding and application of hydrocarbon seal methodologies Three broad categories are covered in this book methodologies addressing cap rock integrity methodologies relating to fault seal and case studies both from the hydrocarbon basins of Northwestern Europe and in the form of outcrop examples With the North Sea Norwegian Sea and Atlantic Margin moving along their respective basin maturity and development curves exploration is being forced deeper into high pressure high temperature terrains while exploitation and development requires greater precision and realism in reservoir simulations to maximise drilling strategies to prolong field life In all instances the need for predictive tools and methodologies that address the integrity and behaviour of top and lateral fault seals to hydrocarbon traps both in the static and dynamic state have been identified as key risk factors and this is reflected in this volume

**New Insights Into Structural Interpretation and Modelling** Geological Society of London, 2003 *Structural and Tectonic Modelling and its Application to Petroleum Geology* R.M. Larsen, H. Brekke, B.T. Larsen, E. Talleraas, 2013-10-22 This monograph presents a unique combination of structural and tectonic modelling with applied petroleum geological problems Focussing on the Norwegian Continental Shelf and neighbouring areas it includes discussion covering all scales from development of sedimentary basins to formation of fractures and joints on a microscale and from exploration to the exploitation of hydrocarbons The book's coverage of structural and tectonic modelling petroleum geology applications and the treatment of the Norwegian Continental Shelf should make this book an invaluable resource book for advanced students of structural and tectonic modelling teachers and researchers as well as for geologists and geophysicists in the petroleum industry

*Hydrocarbon Seals* P. Møller-Pedersen, A.G. Koestler, 1997-12-18 In January 1996 a total of 270 conference participants gathered for 3 days in Trondheim Norway to focus on and to discuss the complex topic of hydrocarbon seals particularly related to deformation zones and to caprocks The conference was the first in Norway and one of the first in Europe to exclusively address this very important subject The purpose of the conference was to present some of the most recent research results to establish state of the art with respect to understanding hydrocarbon seals and to discuss where to go from here to find some of the keys to successful future exploration and enhanced oil and gas recovery Out of the presented papers and posters 17 are compiled and published in this volume These provide a good overview of and

an introduction to the numerous aspects covered during the fruitful days in Trondheim      *Generation, Accumulation and Production of Europe's Hydrocarbons III* Anthony M. Spencer, 2012-12-06 The 30 contributions of this volume cover the main European regions for oil and gas exploration the North Sea and adjacent areas the central and eastern Mediterranean including offshore Albania central and eastern Europe including Poland Hungary the Russian platform and offshore Bulgaria Main topics are investigations to sequence stratigraphy 3D quantitative restoration and balanced structural sections using the LOCACE equipment Additional studies deal with a Monte Carlo method for generating models of porosity and permeability with facies characterization using wireline logs or with petrographic applications of image analysis As further reading this volume is of significant interest for researchers in oil and gas industries but also for scientists at universities

*The Geological Modelling of Hydrocarbon Reservoirs and Outcrop Analogues* Ian D. Bryant, Stephen S. Flint, 2009-04-08 The Geological Modelling of Hydrocarbon Reservoirs and Outcrop Analogues is a collection of 15 selected papers taken from the Symposium of the same name which formed part of the IAS Congress of 1990 held in Nottingham UK Recent technological advances and the ever increasing demand for maximising recovery from existing oil and gas fields has led to an upsurge of interest at both academic and industrial levels in reservoir characterization and quantitative modelling of physical rock properties in 3 D inter well space Synthesizing both industrial and academic research and integrating sedimentology petroleum geology geostatistic and geomathematics this volume is a state of the art presentation of approaches to quantifying geology in order to give better input to 3 D numerical reservoir modelling methods It is the first IAS volume to highlight the necessary interface with academic and oil industry geology by showing how academic research can significantly support the mathematical modelling work of reservoir engineers in industry and contributions to the volume come from an expert international team comprised of university government and international oil industry scientists      **Geology of the**

**Norwegian Oil and Gas Fields** A.M. Spencer, 1987      *Petroleum and Marine Technology Information Guide* J. Hutcheon, A. Myers, S. Oue, B. Rodden, J. Whittick, 2003-09-02 First published in 1981 as the Offshore Information Guide this guide to information sources has been hailed internationally as an indispensable handbook for the oil gas and marine industries

Sedimentary Environments Offshore Norway-Palaeozoic to Recent O.J. Martinsen, T. Dreyer, 2001-06-06 Required reading for geologists working in the offshore areas Volume 10 continues the series from the Norwegian Petroleum Society This work provides an up to date review of the late Palaeozoic to present sedimentary history of the Norwegian offshore areas in the North Sea and Mid Norway basins Case studies overview articles and analogue examples from adjacent areas such as Greenland and Denmark present new ideas on the development of the Norwegian margin from the Carboniferous through the Mesozoic and Cenozoic In particular new evidence and interpretations are presented on well known major reservoir bearing successions such as the Statfjord Formation and Dunlin Group in the Northern North Sea and the Re and the Tilje Formations in the Mid Norway area Furthermore the Upper Jurassic succession in the Haltenbanken area is described giving new

evidence on the interplay between extensional tectonics and sedimentation during the second major rift phase in the area. The Cretaceous and Cenozoic periods are treated extensively showing their importance as overall deep water sedimentary systems with proven and potential reservoir rocks such as in the Ormen Lange Field and for causing burial of Jurassic rocks to advantageous depths for hydrocarbon generation. The Recent sedimentary history of the Norwegian margin is treated with examples of the glacial history and giant submarine slides which understanding is vital for the placement of offshore installations. The book is organised based on geologic time from Palaeozoic through Mesozoic to Cenozoic examples. It includes a set of palaeogeographic maps from the Carboniferous through to the Cenozoic. In addition there are numerous examples of core photographs, well log data correlation panels and seismic as well as outcrop photographs and logs from the analogue examples. Comprehensive reference and keyword lists are also included.

**The Mjølner Impact Event and its Consequences** Filippas Tsikalas, Henning Dypvik, Morten Smelror, 2010-09-22. The Mjølner impact structure was recognized in 1993 and included in the Earth Impact Database in 1996 based on the discoveries of unequivocal meteorite impact indicators such as shocked quartz, Ir enrichments, possible glass remnants, fragments of nickel rich iron oxides in addition to the convincing complex crater shape of the structure. This book presents the geological and geophysical history of the Barents Sea region along with the discovery of the Mjølner impact crater. We place the Mjølner event into the geological framework of the region and present elaborative numerical models of its formation and associated tsunami generation. The book represents an update and synthesis as well as the complete compilation of the Mjølner crater studies.

**Petroleum Geology of the North Sea** K. W. Glennie, 2009-06-29. Since the 3rd edition of this publication emphasis within the petroleum industry has shifted from exploration to appraisal and development of existing hydrocarbon resources. This change is reflected in this new 4th edition which has been significantly expanded to accommodate additional material. The centrepiece of the book however remains a series of descriptions in stratigraphic order of the depositional history and hydrocarbon related rock units of the North Sea.

Earthquakes at North-Atlantic Passive Margins: Neotectonics and Postglacial Rebound Søren Gregersen, Peter W. Basham, 2012-12-06. For many years the two subjects of 1 postglacial rebound and its potential for generating earthquakes and 2 the seismicity of passive continental margins have been of interest and concern to earth scientists on both sides of the North Atlantic. New data and theoretical interpretations have given rise to vigorous discussions on how much the two phenomena inter relate and whether a significant controlling factor on seismicity in northeastern North America and Scandinavia is the crustal uplift that has been occurring since the latest ice age. The lack of a good understanding of these phenomena presented a particular problem for engineering seismologists attempting to prepare accurate seismic hazard estimates for facilities both on land e.g. nuclear power stations and radioactive waste repositories and offshore e.g. petroleum production facilities. The NATO Advanced Research Workshop programme provided an opportunity to bring together a group of relevant geophysicists, geologists and geodesists from both sides of the North Atlantic and a workshop on Causes

and Effects of Earthquakes at Passive Margins and in Areas of Postglacial Rebound on both Sides of the North Atlantic was held in Vordingborg Denmark 9-13 May 1988 The support of the NATO Science Committee is gratefully acknowledged

**Improving the Exploration Process by Learning from the Past** K. Ofstad, E.-J. Kittilsen, P.

Alexander-Marrack, 2000-07-07 Learning by experience is both a part of the daily life and the exploration life A systematic review of the past is essential to improve the exploration process by better managing risks and uncertainties Learning through different disciplines has become a favoured technique With new tools for interpretation and simulation integration and data and the creation of cross discipline teams we can take major step forward in understanding the exploration task and its different elements Global views and lessons learned on the Norwegian Continental Shelf on risk management and retrospective prospect assessment are presented in this book Detailed exploration case histories from the Norwegian Continental Shelf documenting both positive and negative experiences and highlighting the benefits of integrated thinking and methods are presented The impact of the application of various state of the art and developing technologies on portfolio management opportunity evaluation and volumetric and risk assessment of prospects and discoveries are reviewed and the future technological challenges in exploring the remaining hydrocarbon potential of the Norwegian continental Shelf are summarised

**Key Issues in Petroleum Geology** F. John Gregory, Philip Copestake, Julian M. Pearce, 2007 This volume contains a compilation of 17 seminal papers taken from various Geological Society Special Publications and the Journal of the Geological Society on the use and application of stratigraphy in petroleum geology over the last 20 years The volume focuses on case studies in fundamental stratigraphy applied and integrated stratigraphy and alternative methods of stratigraphy The book is introduced with an original scientific and historical review of the subject all papers are set in context with both the benefits of the techniques and some of the shortcomings highlighted By compiling these papers commercial stratigraphers John Gregory Philip Copestake and Julian Pearce have created a volume intended for a wide readership However it is of particular relevance for the training of undergraduate students studying courses on petroleum geology basin development and sequence stratigraphy as well as for all postgraduate students working in petroleum related scientific fields It is also intended as a volume of general use for geoscientists entering the petroleum industry as well as current workers requiring an overview
