## **Heteroptera Of Yakutia:**

**Heteroptera of Yakutia** Nikolai Nikolaevich Vinokurov, 1988      True Bugs of the World (Hemiptera: Heteroptera) Randall T. Schuh, James Alexander Slater, 1995 This monumental reference work treats an entire worldwide order of insects. It summarizes from both a biological and systematic perspective current knowledge on the Heteroptera or true bugs, a group containing approximately 35 000 species, many of which are important to agriculture and public health. To introduce the reader to this group, Randall T. Schuh and James A. Slater offer chapters on the history of the study of the Heteroptera, research techniques, and sources of specimens. They also cover attributes of general biological interest, including habitats, habits, mimicry, and wing polymorphism; selected taxa of economic importance; and basic morphology. Presenting a current classification of the Heteroptera, the authors synthesize to the subfamily and sometimes tribal level the enormous scattered literature, including diagnoses, keys, general natural history, a summary of distributions, and a listing of important faunistic works. In addition to a wealth of detailed illustrations, they provide a glossary to help the reader deal with the confusing terminology that has evolved over the years, as well as an extensive bibliography of more than 1350 entries. Meticulously prepared by two of the world's leading specialists, this major work will be the standard reference on the Heteroptera for many years to come.      Annotated Catalogue of the True Bugs (Heteroptera) of Yakutia Nikolaj N. **Amphibiotic Insects of the Northeast of Asia** I. A. Zasyapkina, Alexander S. Ryabukhin, 2001      *Revision of the Plant Bug Genus Tytthus (Hemiptera, Heteroptera, Miridae, Phylinae)* Thomas J. Henry, 2012-09-10 A revision and the first phylogenetic analysis of the widely distributed plant bug genus *Tytthus* is presented. All 24 species of this genus, including five described as new prey exclusively on planthopper Delphacidae eggs, making them of great importance on agricultural monocots. Two species have been used successfully in biocontrol programs to suppress populations of sugarcane delphacid on sugarcane and brown planthopper on rice. All species of *Tytthus* are relatively small, but the tiny brachypterous males of one species, ranging from 1.08 to 1.30 mm long, rank it as possibly the world's smallest known plant bug. Members of this genus are found in nearly all biogeographic regions, including 18 restricted to the Nearctic and Neotropics and three from the eastern Oriental and Indo-Pacific regions. There are also two Holarctic and one circumtropical, Afrotropical, Neotropical, and Oriental species. A hypothesized relationship with several Nearctic plant bug genera suggests a New World origin for this group of important predatory bugs.      **Biology of the Plant Bugs (Hemiptera: Miridae)** Alfred George Wheeler, 2001 Plant bugs, Miridae, the largest family of the Heteroptera or true bugs, are globally important pests of crops such as alfalfa, apple, cocoa, cotton, sorghum, and tea. Some are also predators of crop pests and have been used successfully in biological control. Certain omnivorous plant bugs have been considered both harmful pests and beneficial natural enemies of pests on the same crop, depending on environmental conditions or the perspective of an observer. As high-yielding varieties that lack pest resistance are planted, mirids are likely to become even more important crop pests. They also threaten crops as insecticide resistance in

the family increases and as the spread of transgenic crops alters their populations Predatory mirids are increasingly used as biocontrol agents especially of greenhouse pests such as thrips and whiteflies Mirids provide abundant opportunities for research on food webs intraguild predation and competition Recent worldwide activity in mirid systematics and biology testifies to increasing interest in plant bugs The first thorough review and synthesis of biological studies of mirids in more than 60 years Biology of the Plant Bugs will serve as the basic reference for anyone studying these insects as pests beneficial IPM predators or as models for ecological research
