Hidden Connections A Science For Sustai:

A Book Analysis of "The Hidden Connections: A Science for Sustainable Living" by Fritjof Capra Stephen Gumboh, 2013-08-07 Literature Review from the year 2011 in the subject American Studies Literature grade A Atlantic International University School of Business and Economics course Seminar Cultural Development 1D language English abstract The book *The Hidden Connections* by Fritjof Capra is premised on the study of living organisms It is based on Capra's understanding of life as growing inevitably out of increasing complexity of cell molecular relationships Capra's belief is that life is a chain of networks and it is these networks that are the very essence of life Capra tries to conceptualize this network concept in living systems by presenting a framework integrating the biological cognitive and social dimensions of life By integrating these three dimensions of life Capra tries to justify the essence of the interconnections that equally exist in various human and social organizations He does so by providing a systematic approach to life's critical issues which continue to have negative impacts on human and social organizations globally The analysis brings up certain aspects of Capra's views of life and how society needed to be organized These range from his urge for organizations to take a systematic approach to new ways of doing business by creating value systems and need to strive towards a sustainable society by redesigning technologies and social institutions without undue distraction of our natural environment The analytical view to most of Capra's views of life is that these views may be situational and not binding to every humane and organizational activity of life The conclusive view of the book is that it is not scientifically oriented to the level of a non scientific mind as it brings with it a lot of human and organizational implications that hinge on social cultural and religious aspects of life Notwithstanding this fact the overall scope of the book seems to cater for all intellectual areas of life and is masterpiece of its kind The Hidden Connections Fritjof Capra, 2003 This text demonstrates how tightly humans are connected with the fabric of life and suggests that it is imperative to organize the world according to a different set of values and beliefs not only for the well being of human organizations but for the survival of humanity as a whole

Stephen Gumboh, 2013-08 Literature Review from the year 2011 in the subject American Studies Literature grade A Atlantic International University School of Business and Economics course Seminar Cultural Development 1D language English abstract The book *The Hidden Connections* by Fritjof Capra is premised on the study of living organisms It is based on Capra's understanding of life as growing inevitably out of increasing complexity of cell molecular relationships Capra's belief is that life is a chain of networks and it is these networks that are the very essence of life Capra tries to conceptualize this network concept in living systems by presenting a framework integrating the biological cognitive and social dimensions of life By integrating these three dimensions of life Capra tries to justify the essence of the interconnections that equally exist in various human and social organizations He does so by providing a systematic approach to life's critical issues which continue to have negative impacts on human and social organizations globally The analysis brings up certain aspects of Capra's views

of life and how society needed to be organized These range from his urge for organizations to take a systematic approach to new ways of doing business by creating value systems and need to strive towards a sustainable society by redesigning technologies and social institutions without undue distraction of our natural environment The analytical view to most of Capra's views of life is that these views may be situational and not binding to every humane and organizational activity of life The conclusive view of the book is that it is not scientifically oriented to the level of a non scientific mind as it brings with it a lot of human and organizational implications that hinge on social cultural and religious aspects of life Notwithstanding this fact the overall scope of the book seems to cater for all intellectual areas of life and is masterpiece of its kind

Science, Society and Sustainability Donald Gray, Laura Colucci-Gray, Elena Camino, 2010-09-28 Recent work in science and technological studies has provided a clearer understanding of the way in which science functions in society and the interconnectedness among different strands of science policy economy and environment It is well acknowledged that a different way of thinking is required in order to address problems facing the global community particularly in relation to issues of risk and uncertainty which affect humanity as a whole However approaches to education in science tend to perpetuate an outmoded way of thinking that is incommensurable with preparing individuals for participation and decision making in an uncertain complex world Drawing on experiences of interdisciplinary dialogue and practice in a higher education context this book illustrates how reformulating the agenda in science and technology can have a revolutionary impact on learning and teaching in the classroom at all levels This exceptional study will interest scholars in Education Science Technology and Society and those looking to further deliberative democracy and civic participation in their students

Research Approaches in Urban

Agriculture and Community Contexts Levon T. Esters, Amie Patchen, Isha DeCoito, Neil Knobloch, 2021-07-27 This book will fill a void in the literature around research and program design and the impact of such experiences on learning outcomes within urban agricultural contexts In particular this book will cover topics such as STEM integration science learning student engagement learning gardens and curriculum design *Alternatives to Economic Globalization* John Cavanagh, Jerry Mander, 2004-10-10 The culmination of a five year project by the International Forum on Globalization IFG this book presents an inspiring plan for moving toward more sustainable humanistic models of economic prosperity with an emphasis on citizen democracies local self sufficiency and ecological health *Educating Science Teachers for Sustainability* Susan K. Stratton, Rita Hagevik, Allan Feldman, Mark Bloom, 2015-06-18 This volume contains a unique compilation of research and reflections representing multiple vantage points stemming from different parts of the world that can help science educators and teacher educators in finding ways to meaningfully and purposefully embed sustainability into teaching and learning It is a rich resource for exploring and contextualizing sustainability oriented science education At this time we find ourselves in a situation in which the earth s ecological system is under significant strain as a result of human activity In the developed world people are asking How can we maintain our current standard of living while those in the developing world are asking How can we increase the quality of our lives all while trying to do what is necessary to mitigate the environmental problems This volume responds to these questions with a focus on educating for sustainability including historical and philosophical analyses and pedagogical and practical applications in the context of science teacher preparation Included are many examples of ways to educate science teachers for sustainability from authors across the globe This text argues that issues of sustainability are increasingly important to our natural world built world national and international economics and of course the political world The ideas presented in the book provide examples for original effective and necessary changes for envisioning educating science teachers for sustainability that will inform policy makers **Leading For Regeneration** John Hardman, 2013-07-03 This book presents the regenerative leadership framework that has emerged from doctoral research and consulting work with successful sustainability leaders and their organizations in business education and community The framework synthesizes the levels of awareness the leadership styles and behaviours and the organizational arrangements that correlate most significantly across these domains Most importantly the overwhelming majority of the leaders in this work agree that individual and collective consciousness development is critical to transforming the culture of organizations for sustainability and beyond The term regenerative has not been chosen arbitrarily but to provide an alternative to the notion of sustainability which many of the leaders featured here indicate has become insufficient to describe what needs to be done economically socially and environmentally if we are to ensure a flourishing world for present and future generations This work in turn has led to the development of the Regenerative Capacity Index RCI a tool designed to assess an organization s readiness to engage in regenerative practice From this evaluation of an organization s regenerative capacity it

becomes possible to design a strategy for regeneration that considers all levels of its environmental social and economic impact both internally and externally in the local and global community Among its major findings the book argues that the more evolved sustainability leaders are becoming increasingly dissatisfied with the construct of sustainability and indicate the need for a profound cultural shift towards regenerative human systems In this framework regenerative organizations are driven by a sense higher purpose and leadership is exercised horizontally and collaboratively Leaders and followers engage in generative conversations to create desirable futures which are then backcasted to eliminate unanticipated consequences Throughout leaders emphasize the critical importance of engaging in personal and collective consciousness development or inner work in order to make regenerative practices possible Circular Entrepreneurship Antonella Zucchella, Sabine Urban, 2019-06-22 This original book explores how the principles of circularity considered a law of nature but neglected within the materialistic orientation of the industrial age are becoming attractive again in business and society Investigation reveals enterprises small and large delivering a stimulating message from changes in entrepreneurial mindsets to the inclusive use of new technologies and a push for innovation Zucchella and Urban explore the novel concept of circular enterprise showing how with their capacity to innovate these firms are becoming the most powerful actors of a new sustainable social order They examine two fundamental questions why is this revolution occurring now and how is it being implemented Focusing on the most innovative practices they demonstrate the potential of circular enterprise for industry and wider society making clear that a new world is emerging **Environment** Jules Pretty, 2006-06-23 This four volume set explores the locations where the environment matters most such as where people are poor where environments are under threat such as on frontiers where there are few natural resources remaining and where industrialization is rampant It will also explore these concerns at different system levels from local community to regional national and global It will also explore costs of damage to the very resources on which economies rely and the values of environmental goods and services and the controversies surrounding such valuations It is organized around environment people interactions livelihoods poverty income economic growth environment environment interactions do people matter and people people interactions collective action challenges institutions
